Introduction to Video Conferencing Best Practice

Q

.......

CISCO

A successful video conference provides a face-to-face meeting, even if the participants are miles or continents apart. Keep in mind that it still is a meeting normal etiquette and dress code apply even here.

General

- Consider setting the unit to *Automatic Answer.*
- Do not forget to rehearse to the extent needed.

In the Meeting Room

- Make sure the microphone is placed at the front of the table to ensure that all speech will be detected. The best position is at least 2 m (6.5') in front of the system, on a flat surface with at least 0.3 m (1') of table in front.
- Directive microphones should point away from the video system.
- Make sure that no obstacles block the view to the microphone at all times.
- Microphones should always be placed away from noise sources like computer and projector fans placed on the table.

The noise from such sources is often perceived as surprisingly loud by the remote participants.

- If you use a document or whiteboard camera try to arrange the participants so that the camera is close to the leader of the meeting, or alternatively, close to a designated controller.
- When a whiteboard is used, the meeting will be perceived as better to the remote participants if the whiteboard is visible through the main camera, as well as through a dedicated whiteboard camera. Broadcasting companies normally do this to let viewers see that the presenter actually is in the same room.
- Remember to arrange all the peripherals so that one participant can reach each of them to point, change the display, record or perform other functions during the conference.
- To help ensure the most natural meeting environment, position the camera on the top center of the receiving monitor, if possible. The camera should point directly at the meeting participants to guarantee eye contact with those at the far end. Check this out by means of the Selfview feature of your video system. The Selfview shows what the remote

party can see from your system (the outgoing video).

- If you are going to share content you will normally make use of duo video. That implies the use of two video streams, one showing the presentation and the other showing the presenter—or the group of presenters. Smaller systems may force you to choose between watching the presentation or the presenter.
- For duo video some attention is needed. Duo video is sometimes shown side-byside with half the screen showing the presentation and the other half showing the presenter. Provide the impression that you seem to look towards the presentation instead of the impression that you sit with your back towards it, when all is viewed on the remote monitor. If in doubt, look straight into the camera to avoid this situation.

Ease of Use

 To help meeting participants dial, add presentations and use other functionality during a call, consider stationing a poster, table tent or other quickreference guide in the room.

Other Tips

Use Camera Presets

Cisco TelePresence systems let you create predefined zoom and camera pointing directions (pan and tilt). Use these to zoom into the person speaking, if appropriate. Do not forget to zoom out again afterwards.

Loudspeaker Volume

The audio system will use the loudspeakers built into the monitor or the Cisco Digital Natural Audio Module.

For some systems you can set the default volume level by adjusting the volume on the monitor with the monitor remote.

Brightness Control

To adjust brightness, colors or other settings of the monitor, use the monitor's own remote control. Adjust the monitor to suit the conditions of the conference room. The monitors supplied by Cisco have on-screen menus that are very easy to use. For more information on configuring the monitor as such, see the corresponding user guides and administration manuals.

Introduction to Video Conferencing Tour the Touch Screen

(-0) Press the Microphone button to mute/unmute microphone. Tap **Dial** to Tap Contacts Press and hold Tap Тар invoke the dial to invoke the Meetings to Messages the left side of the pad. list of contacts invoke a list to invoke the **Volume** button including *Favorites*, of upcoming voice mail to decrease the Directory and scheduled system, if loudspeaker volume Recents. meetings. applicable. and the right side to increase the volume.

Tap the touch screen to wake up the system, if needed.

Tap a button to activate its function.

Scroll in lists as on a smart phone.

About Do Not Disturb

When set to *Do Not Disturb*, ringtones are muted and call attempts made by others to reach you will appear as missed calls.

You may, however, place calls as much as you like.

As default, there is a 60 minutes timeout on the *Do Not Disturb* (after which the system will return to normal operation), but this may have been changed to a different setting by your video support team.

Note! Your video system may, or may not, display all of the icons shown here. Some of the features described in this user guide are optional in certain markets and they may therefore not apply to your system.

......

Introduction to Video Conferencing Log Onto a System with Your Own Credentials

The system will confirm a successful sign-in. You will now receive calls destined for you.

(4

You will be prompted to confirm your intentions.

About Hot-desking

Video systems located in meeting rooms and quiet rooms and running under CUCM (Cisco Unified Communications Manager) may allow you to log in to the video system with your own personal credentials.

CUCM will then route all incoming calls destined for you to that specific video system.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

........

Introduction to Video Conferencing Room Control Using Touch10

Tap the **Bulb** icon to gain access to the room control, if applicable.

Adjust as required.

About Room Control

Your video system may have the optional ability to control certain room settings, like temperature, blinds, curtains and light directly from the Touch 10 control.

Exactly which settings that are available depends on the configuration created by your video support team. The screen-shot shown at left is just one example of how it could be.

Place Call Place Call From Contact List

Tap Contacts.

Alternatively, tap the Search or Dial field. This will invoke the virtual keyboard.

lower left corner of the keyboard.

About the Lists of Contacts

Your lists of Contacts consist of three parts:

Favorites. These contacts have put there by you. These entries will typically be someone you call frequently or otherwise need to access in a swift and convenient manner from time to time.

Directory will typically be a corporate directory installed on your system by your video support team.

Recents is a list of calls you have placed, received or missed earlier.

You may clear the Recents list for privacy reasons, see <u>"Call Recents"</u> on page 45.

The following options apply:

- You may key in a name, number or an IP address and the system will look in all lists for you.
- You may tap a tab and then scroll through the list or key in a name or number. Your search will then be restricted to that specific list.
- You may add the entry to the list of *Favorites*; edit aspects of the entry before calling; change the call rate and remove the entry from Recents.

Put Call on Hold and Resume a Call on Hold

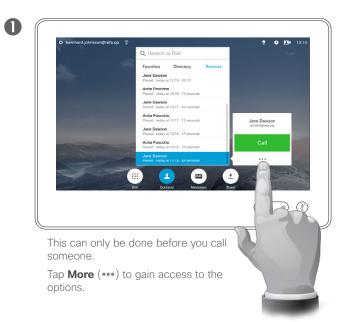

About Putting on Hold

Putting someone on hold is typically something you do as an initial step when transferring someone to another person, but it may also be used when you need to consult a person or as an alternative to muting also including stopping the video transmission.

Change Call Rate

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

About Call Rate

Call rate is the term used to express the amount of bandwidth allocated to the call and is measured in kbps (kilobits per second).

The higher the call rate is, the better the quality will be, but on the expense of higher bandwidth consumption.

The system comes with a default call rate. This is set by your video support team as a part of the *Administrator Settings* (password protected).

Why would you like to temporarily change this setting? In most cases you will use it to avoid choking the video call when you try to call someone at a higher rate than their system and connection support.

Call rate cannot be changed during a call, but you may change it just before you place a call, as outlined here.

Ô

1

31

1

4

Conference Calls with Multiple Participants Add Additional Participants to Existing Call

Assume that you already are in a call. This call may have been initiated by you or by someone else (someone called you).

Place the call, in the usual way. You may alter the *Call settings* of that call before you place it—see side bar for more.

6

This new call will now be added to the existing, thus creating a conference. You may cancel this call without terminating the first call you were in.

You have now established a conference.

You may repeat this procedure to the extent permitted by your video infrastructure.

About Video Conferences

Your video system may be equipped with the capability to initiate a video conference with several participants.

The maximum number of participants supported by your video system will depend on system configuration and the video infrastructure. If in doubt, contact your video support team.

If you want to initiate a video conference, you must call each participant one by one.

If you are the one who initiated the conference you will be able to terminate the entire conference. The other participants, however, may only disconnect themselves from the conference.

Call settings. Those you call may have video systems with different bandwidths. You are not constrained to set all participants to a bandwidth that all systems support. The *Call rate* may be set individually for all participants in order to provide everyone with the best quality available for their system. See <u>"Change Call Rate" on page 22</u>.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

Control Your System Wirelessly Intelligent Proximity

About Intelligent Proximity

The Intelligent Proximity feature allows you to share, see and capture content from a video system wirelessly on your own device. You can also use your own device to control calls on the video system.

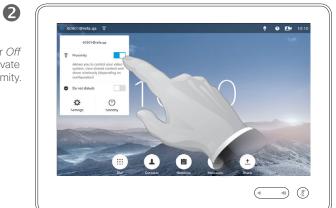

Observe the following:

- You will need to download (free of charge) the Cisco Intelligent
 Proximity app from App Store or
 Google Play. Windows or OS X users,
 go to <u>http://www.cisco.com/go/ proximity</u>.
- Your video support team may have activated all of the features or just a subset of them.
- Intelligent Proximity makes use of ultrasound when connecting users.
 Do not block the microphone of your smart phone or tablet.
- Intelligent Proximity has been designed not to work outside the meeting room.
- However, when privacy dictates, always keep the meeting room entrance doors closed to avoid possible eavesdropping from adjacent rooms.

Control Your System Wirelessly Activate and Deactivate Intelligent Proximity

Tap in the upper left corner of the display.

Set Proximity to On or Off to activate or deactivate Intelligent Proximity.

About Activation

The Intelligent Proximity feature allows you to share, see and capture content from a video system wirelessly on your own device. You can also use your own device to control calls on the video system.

To activate the feature, do as shown at left.

Observe that your video support team may have activated all of the features or just a subset of them.

About Content Sharing

Your video system supports the ability to show presentations in a video call or video conference as well as outside a call (for more on this, see "Presentation Outside Calls" on page 38). The latter ability allows the system to be used for local presentations in a meeting room, thus extending the use of the video system and the room itself.

Note that you may change the layout of the screen during presentations, see the next page for more on this.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

<u>е</u>н 13:55 Net started y 14:55 unday Aeeting 3 Ionday, March 1 1 <u>+</u>

The meeting list will typically look like shown here.

Tap an entry in the list to obtain more information about the meeting.

Tap again to collapse the information box.

Meeting List Basics

Your video system may be connected to a management system capable of scheduling video meetings. Any meetings scheduled will then appear in a List of Meetings.

The List of Meetings contains a list of upcoming, meetings scheduled to take place during the next 14 days (this setting may have been changed by your video support team). The list is sorted using grouping headers. The main grouping category is by day (e.g.: TODAY, TOMORROW, then WEDNESDAY, JUNE 22, 2016 etc).

If you tap an item in the list then more information will become available.

When a scheduled meeting appears as Private meeting it will contain information about the organizer only. There will be no title, no expandable meeting outline as well as no dial-in information.

Scheduled Meetings Join Scheduled Meeting

When a meeting is tagged

provided.

Extending an ongoing meeting

Scheduled meetings have a fixed start and end time. You may want to extend an ongoing meeting. This will be accepted by the system if no other meeting is scheduled for any of the video systems involved, during the period of possible extension.

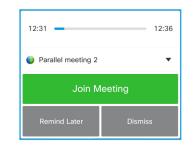

If an extension is sustainable, the *Meeting will end* notification will include an Extend and a Dismiss option.

To extend a meeting, tap the **Extend** button.

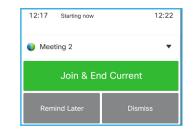

Although the default setting lets you join in up to 10 minutes in advance, your video support team may have implemented a different setting.

Join Meeting

A scheduled meeting may connect you automatically, or you may have to tap Join Meeting.

When the meeting starts you will be offered to join in, to postpone the offer to join in for 5 minutes, or to just dismiss the offer.

If you are in a call when the meeting starts you will also be offered to join in while at the same time end the current call, just like any other situation where someone calls you while you already are in a call.

About Joining

On your video system the *Meeting* Reminder will appear once it is possible to join a meeting. Exactly when that will be depends on the Start time buffer setting. Default buffer setting is 10 minutes, but your video support team may have changed this. It is not possible to join the meeting earlier than the setting dictates.

The meeting reminder contains a time indicator stating when the meeting starts, or alternatively for how long the meeting has been going on (an ongoing meeting is referred to as a Meeting in progress).

The text Starting now will be shown during a time interval spanning from 30 seconds before to 30 seconds after the scheduled start time of the meeting.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

2

2

Tap **Directory**, if needed.

Finding an entry in the Directory by searching for it:

Tap **Directory**, if needed.

Tap **Search or Dial** to invoke the virtual keyboard and key in a name, number or address. Possible matches will appear as you type.

About Directory

The *Directory* serves as your corporate phone book. This directory cannot be edited by you. You may, however, copy entries to your list of *Favorites* and edit them there.

Tap a folder to show its contents, scroll, if needed, to locate a folder or an entry within a folder.

Once located, tap the entry to call, edit or add to your list of favorites in the same way as with the *Recents* list (see the previous page for more on this).

When searching within the corporate Directory, the search will apply to the current directory folder and its subfolders only. To go one level up, tap Back. To make the search apply to the entire corporate directory, do not enter (tap) any folder before the search is commenced.

It may happen that an entry copied from the directory to the list of favorites later is updated in the directory. This update will not be reflected in your list of favorites—you must then manually update the entry in the list of favorites.

Add Camera Position Preset

Tap **Camera** to invoke the camera adjustment menu.

2

Selfview will be activated automatically.

Adjust **Tilt**, **Pan** and **Zoom**, as required.

Tap **Add New**.

Tap **Save** to leave the menu putting changes into effect, or tap **Cancel** to leave menu undoing any changes. About Camera Presets

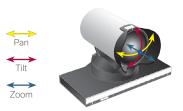

Your video system lets you create predefined zoom and camera pointing directions (also known as pan and tilt). Use these to zoom into the person speaking, if appropriate. Do not forget to zoom out again afterwards.

This means that if you want to create one or more *zoom-in* presets you should also create a *zoom-out* (overview) preset to conveniently switch back to overview mode.

Although you may control the far end camera, i.e. the camera of any of the other participants (given that those cameras are remotely controllable), you cannot define nor make use of their presets.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

Speaker Tracking

To enable *Speaker Tracking*, tap **Camera**, in the upper right corner.

Activate the *Speaker Tracking* feature by tapping the button in the upper right corner of the appearing menu.

Systems equipped with a speaker tracking camera system use two cameras working together with a built-in microphone array. The system will track and show the person speaking so that you won't have to use the Camera Control menu or Camera Presets to zoom in and out.

When speaker tracking has been activated, the camera position presets will still be available. However, if you tap a camera position preset while in speaker tracking mode, one of the cameras will respond accordingly and the speaker tracking will be deactivated.

Activate speaker tracking as shown on this page again, if needed.

Note that speaker tracking will not work if the microphones are muted.

Speaker tracking may be expanded to include the Snap to Whiteboard feature, as outlined on the following page.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

Tap anywhere outside the menu to exit. To deactivate *Speaker Tracking*, repeat the procedure.

CISCO

Snap to Whiteboard

Tap **Camera** to invoke the camera control menu.

Tap the Whiteboard preset to start using this feature, details at right.

About Snap to Whiteboard

Systems with speaker tracking may include the *Snap to Whiteboard* preset. This feature must have been implemented by your video support team to work.

Snap to Whiteboard will cause the camera to display a predefined whiteboard area as well as a person standing by the whiteboard.

If Snap to Whiteboard has not been activated, the camera will zoom in on the person only and not show the whiteboard.

Snap to Whiteboard will only work if a person is standing by the whiteboard and speaking. This has been implemented by design to make it possible to sit in front of the whiteboard without triggering the snap feature.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

ıılıılı cısco

PresenterTrack

Tap **Camera** to invoke the camera adjustment menu.

Tap the Presenter preset to start using this feature, details at right.

About PresenterTrack

Systems with speaker tracking may include the *Presenter* preset. This preset must have been implemented by your video support team to work.

PresenterTrack enables the camera to zoom in and track a presenter who is moving about the stage presenting.

Once the presenter leaves the stage the tracking is brought to a halt.

The procedure for setting this up and the products supporting this feature can be found in the CE8.1 Administrator Guide for our room systems and codecs.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved. Using your camera presets:

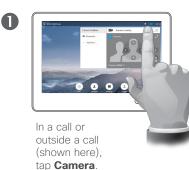

Select the preset to use.

2

Tap anywhere outside the menu to exit.

Adjusting your camera's pan, tilt and zoom:

Adjust **Pan**, **Tilt** and **Zoom**. The selfview will be temporarily turned on to assist you.

B

Tap anywhere outside the menu to exit.

Existing camera presets can be used right away during a call.

Your video system may have more than one camera, for example one camera showing the participants, while another shows the whiteboard.

If you need to add new or modify existing camera presets, this is done in the same way as you do outside a call-turn to <u>"Edit Existing Camera</u> <u>Position Preset" on page 51</u> for details.

As an alternative to adding or editing presets, a simple adjustment of your camera's pan tilt and zoom should also be considered.

D1534502 User Guide Cisco TelePresence SX10, SX20, MX200 G2, MX300 G2, MX700, MX800, SX80 Produced: March 2016 for CE8.1 All contents © 2010-2016 Cisco Systems, Inc. All rights reserved.

Administrator Settings–Tracking

Tracking	
Date, Time & Location	Speaker Tracking
Call Details	Tracking Mode NORMAL CONSERVATIVE
Provisioning	
Multipoint Mode	Snap to Whiteboard
Pairing	Automatically show whiteboard when tracking is active OFF ON
IP & VLAN - Codec	Reconfigure Snap iteboard
Network Status - Codec	
IP & VLAN - Touch	
Network Status - Touch	
SIP	
H323	

About Tracking

For systems with two cameras set up for speaker tracking, this window lets you specify the tracking mode. Select between Normal and Fast.

In addition, this window lets you configure the *Snap to Whiteboard* feature.

Just follow the wizard to set up this feature.

Note! Speaker tracking microphones are height-above-floor sensitive. This is used to make the system respond to a speaking person standing by the whiteboard only. A person sitting in front of the whiteboard will then avoid invoking the snap feature.

To make this work the system will look and listen for a face located in the upper half of the defined whiteboard area.

The whiteboard must be located on the wall opposing the camera system. The feature has not been designed for any other angle of incidence.

For a more detailed discussion on the Snap to Whiteboard feature, see the Administrator Guide for your video system.

About Time Setting

This window lets you specify your preferred date and time formats, as well as the time zone.

If you set the *Date and Time Mode* to *Auto* (as has been done in this example), the system will look for an NTP server and get date and time from there.

If you choose to set *NTP mode* to *Manual* (as has been done in this example), you must specify the NTP server address to make things work.

Network Status - Touch	Default Call		
SIP	Protocol	Auto H323 SIP	
H323			
EMC Resilience			
Reset			

About Call Details

If you enable *Auto Answer* the system will respond by itself to incoming calls after a delay specified by you. Note that an activated auto answer may not provide you with the privacy desired. In the example shown here *Auto Answer* is set to *Off.*

On certain occasions you may have to change the bandwidth (and hence the quality) of the call. Some configurations may have different incoming and outgoing bandwidths (typically ADSL connections), and you may specify the default call rate to ensure a stable video quality.

The default protocol may also be specified. In the example shown, the protocol has been set to *SIP*.

Caution! There is no *Cancel* function letting you exit the menu undoing any changes you have made. Take care!

About Multipoint

There are basically two modes of video conferencing; viz. MultiWay and MultiSite.

- To enable MultiWay, a MultiWay address must have been entered.
- If a MultiWay address has been specified and MultiWay is selected, MultiWay will always be used for video conferencing.
- If a MultiWay address has been specified, but MultiSite is selected, MultiSite will be used.
- If set to Auto, MultiWay will be used if a MultiWay address has been specified, otherwise MultiSite will be used.
- If set to Off, no video conferencing will be possible.
- Any use of the MultiSite feature requires the presence of the MultiSite option.

Caution! There is no *Cancel* function letting you exit the menu undoing any changes you have made. Take care!

About EMC Resilience

If the Touch controller is used in environments with considerable amounts of electromagnetic noise present, you may experience an appearance of false signals—as if someone tapped the Touch controller when obviously nobody did so.

To cope with this you may set the *EMC Resilience Mode* to *On*. You must then press and hold for a little while, rather than just tap, in order to make the system aware of your tapping. This will prevent the appearance of spurious signals.

Caution! There is no *Cancel* function letting you exit the menu undoing any changes you have made. Take care!
