## Release Notes for the Ultra Cloud Core Policy Control Function Version 2022.03.3

First Published: July 29, 2022 Last Updated: September 19, 2022

### Introduction

This Release Notes identifies changes and issues related to this software release.

### **Release Lifecycle Milestones**

Release Lifecycle Milestone	Milestone	Date
First Customer Ship	FCS	29-July-2022
End of Life	EoL	29-July-2022
End of Software Maintenance	EoSM	31-Jan-2024
End of Vulnerability and Security Support	EoVSS	31-Jan-2024
Last Date of Support	LDoS	31-Jan-2025

#### **Release Package Version Information**

Software Packages	Version
pcf.2022.03.3.SPA.tgz	2022.03.3

Descriptions for the software packages provided with this release are available in the Release Package Descriptions section.

#### Verified Compatibility

Products	Version
Ultra Cloud Core SMI	2020.02.2.3.12
Ultra Cloud Core CDL	1.9.1

For information on the Ultra Cloud Core SMI release, refer to the corresponding SMI Release Notes available at:

https://www.cisco.com/c/en/us/support/wireless/ultra-cloud-core-subscriber-microservices-infrastructure/series.html

## **Related Documentation**

For the complete list of documentation available for this release, go to: <u>https://www.cisco.com/c/en/us/support/wireless/ultra-cloud-</u> <u>core-policy-control-function/tsd-products-support-series-home.html</u>

## Installation and Upgrade Notes

This Release Notes does not contain general installation and upgrade instructions. Refer to the existing installation documentation for specific installation and upgrade considerations.

#### Software Integrity Verification

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through **Cisco.com Software Download Details.** To find the checksum, hover the mouse pointer over the software image you have downloaded.

Details	X SM offers signature package	Related Links	and Documentation	
Buildingen :	3098.01.0	< No related trace or documentation -		
Reisson Date :	29-Jan-2020			
Fielderse :	wrif 3090, 1.0:30%, gar			
Size (	2414-07 MB ( 3531957999 bytes)			
MD5 Deschart	n Bielichildfort7c://www.collific.coll/fil/wfi			
		Release Date	Size	
	offine signature package 3999.1.0.SPA.igz	29-Jan-2020	2414.57 MB	-

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "..." at the end.

To validate the information, calculate a SHA512 checksum using the information in <u>Table 1</u> and verify that it matches either the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop please see the table below.

Operating System	SHA512 checksum calculation command examples	
Microsoft Windows	Open a command line window and type the following command	
	<pre>&gt; certutil.exe -hashfile <filename>. <extension> SHA512</extension></filename></pre>	
Apple MAC	Open a terminal window and type the following command	
	\$ shasum -a 512 <filename>.<extension></extension></filename>	

#### Table 1 – Checksum Calculations per Operating System

Open Bugs for this Release

Linux	Open a terminal window and type the following command	
	\$ sha512sum <filename>.<extension></extension></filename>	
	Or	
	\$ shasum -a 512 <filename>.<extension></extension></filename>	
NOTES:		
<filename> is the name of the file.</filename>		
<pre><extension> is the file extension (e.gzip or .tgz).</extension></pre>		

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you to not attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

#### **Certificate Validation**

PCF software images are signed via x509 certificates. For information and instructions on how to validate the certificates, refer to the .README file packaged with the software.

## Open Bugs for this Release

The following table lists the known bugs that remain open in this specific software release.

Bug ID	Headline
<u>CSCwc56166</u>	RANNAS cause - N5 delete response does not have RAN NAS cause event under evs notify
<u>CSCwc56179</u>	RANNAS cause details repeatedly being shared on N5 notify as well as in N5 delete response

## Resolved Bugs for this Release

The following table lists the known bugs that are resolved in this specific software release.

**NOTE:** This software release may contain bug fixes first introduced in other releases. Additional information for all resolved bugs for this release are available in the <u>Cisco Bug Search Tool</u>.

Bug ID	Headline	Behavior Change
CSCwc09384	PCF REL_2022.01.0.i89   Missing IPv6 entry in subscriber's sessions	No
<u>CSCwc39326</u>	NPLI - production issue - Rx - Incorrect Location type shared on RAR	No
<u>CSCwc50257</u>	LDAP invalid attribute Syntax flood, during site isolation and restoration	No
<u>CSCwc52514</u>	N5_Migration: Duplicate Policy triggers set in N7_notify for Multiple N5 sessions.	No
<u>CSCwc52694</u>	N5_Migration: CRD input of PC and PV in String resulting in swapped values.	No

#### **Operator Notes**

Bug ID	Headline	Behavior Change
<u>CSCwc60644</u>	show rest-endpoint discovered-profiles udr output throwing error	No
<u>CSCwc70450</u>	When rack2 was shutdown, index validation for stale session from remote rack fails lead to CDL crash.	No
<u>CSCwc99471</u>	NCGI value from PCF is sent with 8 digits instead of 9 digits.	No

## **Operator Notes**

### Cloud Native Product Version Numbering System

The show helm list command displays detailed information about the version of the cloud native product currently deployed.

## Versioning: Format & Field Description

Where.

#### YYYY → 4 Digit year.

Mandatory Field

#### Mandatory Field Starts with 2020.

· Incremented after the last planned release of year.

#### RN → Major Release Number.

- Mandatory Field
- · Starts with T.
- Support preceding 0.
- Reset to 1 after the last planned release of a year(YYYY)

#### MN -> Maintenance Number.

- Mandatory Field
  - Starts with 0.
  - Does not support preceding 0.
  - Reset to 0 at the beginning of every major release for that remase.
  - · Incremented for every maintenance release
  - · Preceded by 'm' for builds from main branch.

## TTN → Throttle of Throttle Number. Optional Field, Starts with 1.

- · Precedes with 't' which represents the word
- "throttle of throttle".
- Applicable only in "Throttle of Throttle" cases.
- Reset to 1 at the beginning of every major release for that release.

#### DN → DEV branch Number.

- Same as TTN, except Used for DEV branches
- · Precedes with "d" which represents "dev branch".

#### MR → Major Release for TOT and DEV branches

- Only applicable for TOT and DEV Branches.
- Starts with 0 for every new TOY and DEV branch.

#### BN → Build Number

- Optional Field, Starts with 1.
  Precedes with "1" which represents the word.
- "interim".
- Does not support preceding 0.
- Reset at the beginning of every major release for
- that release • Reset for every throttle of throttle

The appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format facilitates identifying the changes between releases when using Bug Search Tool to research software releases.

#### **Release Package Descriptions**

Table 2 lists provide descriptions for the software packages that are available with this release.

#### Table 2 - Release Package Information

Software Packages	Description
pcf. <version>.SPA.tgz</version>	The PCF offline release signature package. This package contains the PCF deployment software as well as the release signature, certificate, and
	verification information.

## g of every major release for that $BN \rightarrow E$
