June 8, 2016

To Whom It May Concern:

Acumen Security verified that the following software faithfully embeds a FIPS 140-2 validated cryptographic module,

• Cisco Unified Communications Manager (CUCM) software version 11.5.

During the course of the review, Acumen Security confirmed that the following FIPS 140-2 cryptographic module is incorporated into the product,

- Cisco FIPS Object Module Version: 6.0, FIPS 140-2 certificate #2505,
- RSA BSAFE® Crypto-J JSAFE and JCE Software Module (version 6.1), cert # 2058.

Acumen Security confirmed that the following features leverage the embedded module to provide cryptographic services, encryption, hashing, key derivation, key exchange, and asymmetric cryptography associated with the following services:

- TLS for Call Processing,
- TLS for CA Service (CAPF),
- TLS for XCP (XMPP),
- TLS for SIP Proxy,
- SFTP,
- LDAP,
- HTTPS.

Additionally, Acumen Security confirmed that the above referenced cryptographic module is initialized in a manner consistent with the instructions provided in the non-proprietary Security Policy.

Details of the verification may be obtained from Cisco Systems, Inc. at the request of interested parties. This letter represents the independent opinions of Acumen Security and does not imply endorsement of the product by the CMVP or any other parties.

Sincerely,

Ashit Vora Laboratory Director
