VPN Configuration on SPA525G/SPA525G2 IP Phone

Objective

This document showcases the procedure for VPN configuration on the SPA525G/SPA525G2 IP Phones. The VPN can be used to connect securely from an offsite location to the onsite network.

Applicable Devices

- SPA 525G
- SPA 525G2

VPN Configuration.

Step 1. Press the Setup button on the phone. The Information and Settings menu appears.

Step 2. Use the navigation keys and scroll down to Network Configuration. Press the **Select** softkey. The *Network Configuration* menu appears.

	Set		Back	

Step 4. The fields are explained as follows. Every field where characters are to be entered has option softkey and delChar softkey. The option softkey when pressed gives option for entering the type of characters like numbers, IP address, Star Code. delChar button can be pressed to delete a character.

• VPN Server — Enter the IP Address of the VPN server to be connected. Press the **Down Arrow** navigation key to get to next option.

• User Name — Enter the User Name that will be used to authenticate when getting connected to VPN server. Press the **Down Arrow** navigation key to get to next option.

• Password — Enter the Password that will be used to authenticate when getting connected to VPN server. Press the **Down Arrow** navigation key to get to next option.

• Tunnel Group — It is not typically required. If it is set for the VPN Server then enter the Tunnel Group. Press the **Down Arrow** navigation key to get to next option.

• Connect on Bootup — This can be enabled by pressing the **Right Arrow** navigation key. This will enable the phone to connect to VPN server whenever the phone is booted.

• Enable Connection — This will enable the connection.

Step 5. When configuration is complete, press the **Back** softkey to get back to the previous Network Configuration menu.
