

## Configuring Multi-Tenants on SIP Trunks

This feature allows specific global configurations for multiple tenants on SIP trunks that allow differentiated services for tenants. Configuring Multi-Tenants on SIP Trunks allows each tenant to have their own individual configurations. The configurations include timers, credentials, bind requests, and other parameters which are available under sip-ua and voice service voip/sip configurations. Multi-tenant functionality helps to create multiple configurations with ease and provides support for scalable and flexible mix of typical enterprise services.

## Feature Information for Configuring Multi-Tenants on SIP Trunks

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <https://cfng.cisco.com/>. An account on Cisco.com is not required.

Feature Name	Releases	Feature Information
Support for Configuring Multi Tenants on SIP Trunks	Cisco IOS 15.6(2)T Cisco IOS XE Denali 16.3.1	This feature allows the provision to configure specific global configurations for multiple tenants on SIP trunks.  The following commands were introduced: <b>voice class tenant</b> <tag> and <b>voice-class sip tenant</b> <tag>.

## Information About Configuring Multi-tenants on SIP Trunks

With the introduction of multi-tenancy support on CUBE, the sip-specific attributes can be configured at per tenant basis in addition to the existing global or dial-peer levels.

The **voice class tenant** <tag> command allows sip-specific attributes to be configured at per tenant basis. The command **voice class tenant** <tag> can be then applied to individual dial-peers, thereby associating them to a particular tenant. See the following table "[Table 1: Multi-Tenant Configuration List](#)" for information on the complete list of configurations present under the **voice class tenant** <tag>.

If tenants are configured under dial-peer, then configurations are applied in the following order of preference.

- Dial-peer configuration
- Tenant configuration
- Global configuration

That is, if the value of the attribute under dial-peer configuration is system, then the value is taken from the tenant configuration. And, if the value under the tenant configuration is also system, then the global configuration is used.

If there are no tenants configured under dial-peer, then the configurations are applied using the default behavior in the following order:

- Dial-peer configuration
- Global configuration

The following table lists the various configurations present under **voice class tenant** <tag>. For more information on specific configurations, see the [Voice and Video](#) command reference guide lists.

**Note** Attributes that are not available under **voice class tenant** <tag> use the default behavior—With preference of dial-peer followed by the global configuration.

**Table 1: Multi-Tenant Configuration List**

Command	Description
aaa	SIP-UA AAA related configuration
anat	Allow alternative network address types IPv4 and IPv6
asserted-id	Configure SIP UA privacy identity settings
associate	Associate a RCB for outgoing calls
asymmetric	Configure global SIP asymmetric payload support
authentication	Digest Authentication Configuration
bandwidth	Allow SIP SDP bandwidth-related options
bind	SIP bind command
block	Block 18X response to INVITE
call-route	Configure call routing options

Command	Description
conn-reuse	Reuse the sip registration tcp connection for the end-point behind a Firewall
connection-reuse	Use listener port for sending requests over UDP
contact-passing	302 contact to be passed through for CFWD
content	Content carried as part of SIP message
copy-list	Configure list of entities to be sent to peer leg
credentials	User credentials for registration
disable-early-media	Disable early-media cut through
dns -a-override	Skip DNS A/AAAA query when SRV query timeout
dscp -profile	DSCP Profile global config
early-media	Configure method to handle early-media Update Request
early-offer	Configure sending Early-Offer
encap	Configure SDP encapsulation
error-code-override	Configure sip error code
error- passthru	SIP error response pass-thru functionality
exit	Exits from the voice class configuration mode
g729	G729 codec interoperability settings
handle-replaces	Handle INVITE with REPLACES header at SIP spi
header-passing	SIP Headers need to be passed to applications
help	Description of the interactive help system
history-info	History Info header support
host-registrar	Use sip-ua registrar value in Diversion and Contact header for 3xx messages
interop-handling	Enable interop-handling
localhost	Specify the DNS name for the localhost
map	Mapping options
max-forwards	Change number of max-forwards for SIP Methods
midcall -signaling	Configure method to handle mid-call signaling

nat	SIP nat global config
no	Negate a command or set its defaults
notify	SIP Signaling Notify Configuration
offer	Configure settings for Offers made from the Gateway
options-ping	Send OPTION pings to remote end
outbound-proxy	Configure an Outbound Proxy Server
pass-thru	SIP pass-through global config
permit	Permit hostname for this gateway
preloaded-route	Use pre-loaded route header for outgoing calls, if available
privacy	Configure SIP UA privacy settings
privacy-policy	Set privacy behavior for outgoing SIP messages
random-contact	Use Random Contact for outgoing calls, if available
random-request- uri	Configure options for Request-URI having random value
reason-header	Configure settings for supporting SIP Reason Header
redirection	Enable call redirection (3xx) handling
refer- ood	Configure maximum number of out-of-dialog refer made to the Gateway
referto -passing	Refer-To needs to be passed through for transfer
registrar	Configure SIP registrar VoIP Interface
registration	Enable registration options
re1xx	Type of reliable provisional response support
remote-party-id	Enable Remote-Party-ID support in SIP User Agent
requi -passing	Request URI needs to be passed through
reset	SIP Reset Options
retry	Change default retries for each SIP Method
send	Configure outgoing message options
session	SIP Voice Protocol session config
sip-profiles	SIP Profiles global config

sip-server	Configure a SIP Server Interface
srtp	Allow SIP related SRTP options
srtp-auth	Allow to set preferred suites
tel-config	Tel format cfg for headers other than req -line in
timers	SIP Signaling Timers Configuration
update- callerid	Enable sending updates for callerid
url	Url configuration for request-line url in outgoing INVITE
video	Video related config for sip
warn-header	SIP Warning-Header global config
xfer	Transfer target configuration

# How to Configure Multi-Tenants on SIP Trunks

## Configuring Multi-Tenants on SIP Trunks

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. Use the following commands to configure multi-tenants:
  - **voice class tenant <tag>** in the global configuration mode
 

Once you configure the **voice class tenant <tag>** command in the global mode, the configuration will move to the **voice class tenant <tag>** submode. You can configure all the sip-specific attributes in this submode.
  - **voice-class sip tenant <tag>** in the dial-peer configuration mode
4. **end**

### DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>enable</b> <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>

	Command or Action	Purpose
<b>Step 2</b>	<p><b>configure terminal</b></p> <p><b>Example:</b></p> <pre>Device# configure terminal</pre>	Enters global configuration mode.
<b>Step 3</b>	<p>Use the following commands to configure multi-tenants:</p> <ul style="list-style-type: none"> <li>• <b>voice class tenant &lt;tag&gt;</b> in the global configuration mode</li> </ul> <p>Once you configure the <b>voice class tenant &lt;tag&gt;</b> command in the global mode, the configuration will move to the <b>voice class tenant &lt;tag&gt;</b> submode. You can configure all the sip-specific attributes in this submode.</p> <ul style="list-style-type: none"> <li>• <b>voice-class sip tenant &lt;tag&gt;</b> in the dial-peer configuration mode</li> </ul> <p><b>Example:</b></p> <p>In global configuration mode</p> <pre>! Configuring tenant 1 Device(config)# voice class tenant 1 Device (config-class)# ? aaa - sip-ua AAA related configuration anat - Allow alternative network address types IPV4 and IPV6 asserted-id - Configure SIP-UA privacy identity settings ..... ..... ..... Video - video related function Warn-header - SIP related config for SIP. SIP warning-header global config. Device (config-voi-tenant)# end ----- ! Configuring tenant 2 Device(config)# voice class tenant 2 Device (config-class)# ? aaa - sip-ua AAA related configuration anat - Allow alternative network address types IPV4 and IPV6 asserted-id - Configure SIP-UA privacy identity settings ..... ..... outbound-proxy - Configure an Outbound Proxy Server pass-thru - SIP pass-through global config ..... ..... srtp - Allow SIP related SRTP options Warn-header - SIP related config for SIP. SIP warning-header global config. Device (config-voi-tenant)# end</pre> <p><b>Example:</b></p>	Use the <b>voice-class sip tenant &lt;tag&gt;</b> command in the global configuration mode to configure a tenant with sip-specific attributes. This command tag can then be applied to one or more dial-peers using the <b>voice-class sip tenant &lt;tag&gt;</b> command under the dial-peers.

	Command or Action	Purpose
	<pre>In dial-peer configuration mode  !Configuring tenant 1 under dial-peer 10 Device (config)# dial-peer voice 10 voip Device (config-dial-peer)# voice-class sip tenant 1 Device (config-dial-peer)# end ----- !Configuring tenant 2 under dial-peer 20 Device (config)# dial-peer voice 20 voip Device (config-dial-peer)# voice-class sip tenant 2 Device (config-dial-peer)# end  !An example for the use of the "no" form of command voice-class sip tenant Router(config)# dial-peer voice 3000 voip Router(config-dial-peer)# voice-class sip tenant 1 Router(config-dial-peer)# no voice-class sip tenant 1  When the <b>no</b> form is configured, the dial-peer is no longer associated with the tenant tag configuration. The attributes are now applied using the default order of dial-peer followed by the global configuration.</pre>	
<p><b>Step 4</b></p>	<pre><b>end</b>  <b>Example:</b>  Device(config-dial-peer)# end</pre>	<p>Returns to privileged EXEC mode.</p>

## Example: SIP Trunk Registration in Multi-Tenant Configuration

For SIP trunk registration, the **voice class tenant <tag>** command is not associated with any dial-peer configuration. All outgoing registrations are triggered to the Registrars when credentials are configured under **voice class tenant <tag>**.

```
Router# show run | sec tenant
```

```
Voice class tenant 1
registrar 1 ipv4:10.64.86.35:9051 expires 3600
credentials username aaaa password 7 06070E204D realm aaaa.com
outbound-proxy ipv4:10.64.86.35:9057
bind control source-interface GigabitEthernet0/0
```

```
Voice class tenant 2
registrar 1 ipv4:9.65.75.45:9052 expires 3600
credentials username bbbb password 7 110B1B0715 realm bbbb.com
outbound-proxy ipv4:10.64.86.40:9040
bind control source-interface GigabitEthernet0/1
```

For multi-tenancy support on Cisco Unified Border Element, you can configure voice class tenants with different credentials, but having the same registrar. In that scenario, it is recommended that you configure the

CLI commands **sip-server** and **registrar** under **voice class tenant** configuration. The following is a sample configuration:

```
voice class tenant 1
  credentials number 1111 username test password 7 071B245B5D1D realm ipvoice.jp
  authentication username test password 7 06120A3258
  registrar ipv4:1.1.1.1 expires 120
  sip-server ipv4:1.1.1.1
!
voice class tenant 2
  credentials number 2222 username test password 7 09584B1E0A11 realm ipvoice.jp
  authentication username test2 password 7 071B245F5A
  registrar ipv4:1.1.1.1 expires 120
  sip-server ipv4:1.1.1.1
```
