CONTENTS

Cisco SD-Routing Commands

request platform software sd-routing activate chassis-number

To activate the chassis number on a device operating in the SD-routing mode on request, use the **request platform software sd-routing activate chassis-number** command in privileged EXEC mode.

request platform software sd-routing activate chassis-number *chassis_number* **token** *token_id*

Syntax Description

chassis_number	Activates the chassis number on the device. Specify the chassis number for activation on request.
token*token_id*	Specify the token of the chassis number for activation.

Command Default

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Example

The following example shows how to activate the chassis number on the device using the **request platform software sd-routing activate chassis-number** command:

```
Device#request platform software sd-routing activate chassis-number 123 token cisco
Device#
```

request platform software sd-routing certificate install

To install a client certificate on a device where you have enabled the SD-Routing feature, enter the **request platform software sd-routing certificate install** command in privileged EXEC mode.

request platform software sd-routing certificate install *path-to-certificate-file*

Syntax Description

path-to-certificate-file	Specify the absolute path fo the folder to upload the generated file. You can specify any name for the folder that is created within the *bootflash:ctrl_mng/* directory.

Command Default

None.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

To install the client certificates for manually onboarding the SD-Routing software device, generate a Certificate Signed Request (CSR) for the device using the **request platform software sd-routing certificate install** command in privileged EXEC mode.

The following example shows how to install a client certificate located in a VPN.

```
Device# request platform software sd-routing certificate install bootflash:ctrl_mng/test
```

request platform software sd-routing csr upload

To generate a Certificate Signed Request (CSR) for the device and upload to the specificed folder, use the **request platform software sd-routing csr upload** command in privileged EXEC mode.

request platform software sd-routing csr upload *path-to-certificate-file*

Syntax Description

path-to-certificate-file	Specify the absolute path fo the folder to upload the generated file. You can specify any name for the folder that is created within the *bootflash:ctrl_mng/* directory.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

To install the client certificates for manually onboarding the SD-Routing software device, generate a Certificate Signed Request (CSR) for the device using the **request platform software sd-routing csr upload** command in privileged EXEC mode.

Note You can use this command only when you onboard the software devices manually.

The following example shows how to generate a client certificate and upload to the specified folder.

```
Device# request platform software sd-routing csr upload bootflash:ctrl_mng/test
```

request platform software sd-routing root-cert-chain install

To install an enterprise root certificate on a device where you have enabled the SD-Routing feature, enter the **request platform software sd-routing root-cert-chain install** command in privileged EXEC mode.

request platform software sd-routing root-cert-chain install *filepath-filename* [**vpn** *rcci_leaf*]

Syntax Description

filepath-filename	Install the file containing the root certificate. Specify the absolute path to the file, including the filename. The root certificate chain can be stored in one of the following locations: • **bootflash:** • **crashinfo:** • **flash:**
vpn *rcci_leaf*	Specifies the VPN in which the certificate file is located.

Command Default

By default, the device is equipped with Public Key Infrastructure (PKI) and Symantec-signed root certificates.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

If the overlay is Cisco PKI or Symantec, you do not have to install a root certificate

If it is an enterprise overlay, install enterprise root certificates by entering the **request platform software sd-routing root-cert-chain install** command in privileged EXEC mode.

Ensure that you have saved the enterprise root certificate that you want to install, in one of the supported locations.

After you have installed a root certificate, use the **show sd-routing control local-properties summary** to verify certificate installation. If installed correctly, the `root-ca-chain-status` field in the output displays value `Installed`.

The following example shows how to install an enterprise root certificate located in a VPN.

```
Device# request platform software sd-routing root-cert-chain install
bootflash:ent-root-cert-file vpn 1

Device#show sd-routing control local-properties summary

request platform software sd-routing root-cert-chain uninstall

To uninstall an enterprise root certificate on a device where you have enabled the SD-Routing feature, enter the **request platform software sd-routing root-cert-chain uninstall** command in privileged EXEC mode.

request platform software sd-routing root-cert-chain uninstall

Command Default

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

To uninstall an enterprise root certificate on a device, use the **request platform software sd-routing root-cert-chain uninstall** command in privileged EXEC mode.

Example

The following example shows how to uninstall an enterprise root certificate on a device using the **request platform software sd-routing root-cert-chain uninstall** command:

```
Device#request platform software sd-routing root-cert-chain uninstall
Successfully uninstalled the root certificate chain
```

show sd-routing certificate installed

To display the cretificate installed on a device operating in the SD-Routing mode, use the **show sd-routing ertificate installed** command in privileged EXEC mode.

show sd-routing certificate installed

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the certificate installed on the device .

The following is sample output of the **show sd-routing certificate installed** command:

```
Device#show sd-routing certificate installed
Installed device certificates

show sd-routing certificate reverse proxy

To display the signed certificate installed on a SD-Routing device for Authentication with Reverse Proxy, use the **show sd-routing certificate reverse-proxy** command in privileged EXEC mode.

show sd-routing certificate reverse-proxy

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the he signed certificate installed on a SD-Routing device for Authentication with Reverse Proxy.

The following is sample output of the **show sd-routing certificate reverse-proxy** command:

show sd-routing certificate root-ca-cert

To display the root CS cretificate installed on a device operating in the SD-Routing mode, use the **show sd-routing ertificate root-ca-cert** command in privileged EXEC mode.

show sd-routing certificate root-ca-cert

Command Modes

Privileged EXEC (#)

```

show sd-routing certificate root-ca-crl

To display the root certificate revocation list on a device operating in the SD-Routing mode, use the **show sd-routing ertificate root-ca-crl** command in privileged EXEC mode.

show sd-routing certificate root-ca-crl

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the list of root certificated revocated on the device .

The following is sample output of the **show sd-routing certificate root-ca-crl** command:

show sd-routing certificate serial

To display the chasis and serial numbers of the certificate installed on a SD-Routing device for Authentication with Reverse Proxy, use the **show sd-routing certificate serial** command in privileged EXEC mode.

show sd-routing certificate serial

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the chasis and serial numbers of the certificate installed on a SD-Routing device for Authentication with Reverse Proxy.

The following is sample output of the **show sd-routing certificate serial** command:

```
Device# show sd-routing certificate serial
Chassis number: C8K-9bdc48d2-4987-4d49-8f28-e62e72900628 serial number: 1234570D Subject
S/N: N/A
```

show sd-routing certificate signing-request

To display information about certificate signing request (CSR) installed on devices in the SD-Routing mode, enter the **show sd-routing certificate signing-request** command in privileged EXEC mode.

show sd-routing certificate signing-request [**decoded**]

Syntax Description

decoded	Display decoded certificate signing-request.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the certificate signing request installed on the device .

The following is sample output of the **show sd-routing certificate signing-request** command:

```
Device# show sd-routing certificate signing-request decoded

show sd-routing certificate validity

To display information about the validity of the certificate in the SD-Routing mode, enter the **show sd-routing certificate validity** command in privileged EXEC mode.

show sd-routing certificate validity

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the validity of the certificate installed on the device .

The following is sample output of the **show sd-routing certificate validity** command:

```
Device# show sd-routing certificate validity
The certificate is valid from  Nov 27 08:53:44 2023 GMT  (Current date is Tue Nov 28 05:33:51
 GMT 2023) & valid until  Nov 26 08:53:44 2024 GMT
```

show sd-routing control connections detail

To display detailed information about control-plane connections on a device operating in the SD-Routing mode, use the show **sd-routing control connections** command in privileged EXEC mode.

show sd-routing control connections detail

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify control connections from the device to Cisco vManage, Cisco vBond, <any other components? > .

The following is sample output of the **show sd-routing control connections detail** command:

```
Device# show sd-routing control connections detail

show sd-routing control connections history

To display information about control-plane connection attempts initiated by a device operating in the SD-Routing mode, enter the **show sd-routing control connections history** command in privileged EXEC mode.

show sd-routing control connections history [**detail**]

Syntax Description

detail	(Optional) Displays information about each control-plane connection attempt.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

The following is sample output of the **show sd-routing control connections history** command:

```
Device# show sd-routing control connections history
Legend for Errors
ACSRREJ     - Challenge rejected by peer.                NOVMCFG     - No cfg in vmanage
for device.
BDSGVERFL   - Board ID Signature Verify Failure.         NOZTPEN     - No/Bad chassis-number
 entry in ZTP.
BIDNTPR     - Board ID not Initialized.                  NTPRVMINT   - Not preferred
interface to vManage.
BIDNTVRFD   - Peer Board ID Cert not verified.           OPERDOWN    - Interface went oper
 down.
BIDSIG      - Board ID signing failure.                  ORPTMO      - Server's peer timed
 out.
CERTEXPRD   - Certificate Expired                        PSEV6DISC   - Pseudo v6 interface
 disconnect.
CRTREJSER   - Challenge response rejected by peer.       RDSIGFBD    - Read Signature from
 Board ID failed.
CRTVERCRLFL - Fail to verify Peer Certificate Due to CRL. REGIDCHG    - Region ID config
update
CRTVERFL    - Fail to verify Peer Certificate.           REGIDMIS    - Region ID set
mismatch.
CTORGNMMIS  - Certificate Org name mismatch.            RESTRQFAIL  - Rest request failed.
DCONFAIL    - DTLS connection failure.                   RMGSPR      - Remove Global saved
 peer.
DEVALC      - Device memory Alloc failures.              RXTRDWN     - Received Teardown.
DHSTMO      - DTLS HandShake Timeout.                    SERNTPRES   - Serial Number not
present.
DISCVBD     - Disconnect vBond after register reply.     SSLNFAIL    - Failure to create
new SSL context.
DISTLOC     - TLOC Disabled.                             STENTRY     - Delete same tloc
stale entry.
DUPCLHELO   - Recd a Dup Client Hello, Reset Gl Peer.    STNMODETD   - Teardown extra vBond
 in STUN server mode.
DUPSER      - Duplicate Serial Number.                   SYSIPCHNG   - System-IP changed.
DUPSYSIPDEL - Duplicate System IP.                       SYSPRCH     - System property
changed.
EMBARGOFAIL - Embargo check failed                       TMRALC      - Timer Object Memory
```

```
 Failure.
HAFAIL      - SSL Handshake failure.                      TUNALC      - Tunnel Object Memory
 Failure.
HWCERTREN   - Hardware vEdge Enterprise Cert Renewed      TXCHTOBD    - Failed to send
challenge to BoardID.
HWCERTREV   - Hardware vEdge Enterprise Cert Revoked.     UNAUTHEL    - Recd Hello from
Unauthenticated peer.
IP_TOS      - Socket Options failure.                     UNMSGBDRG   - Unknown Message
type or Bad Register msg.
LISFD       - Listener Socket FD Error.                   VBDEST      - vDaemon process
terminated.
MEMALCFL    - Memory Allocation Failure.                  VECRTREV    - vEdge Certification
 revoked.
MGRTBLCKD   - Migration blocked. Wait for local TMO.      VB_TMO      - Peer vBond Timed
out.
NEWVBNOVMNG - New vBond with no vMng connections.         VM_TMO      - Peer vManage Timed
 out.
NOACTVB     - No Active vBond found to connect.           VP_TMO      - Peer vEdge Timed
out.
NOERR       - No Error.                                   XTVMTRDN    - Teardown extra
vManage.
NOSLPRCRT   - Unable to get peer's certificate.

show sd-routing control connections summary

To display information about the active control-plane connections on a device operating in the SD-Routing mode, use the show **sd-routing control connections summary** command in privileged EXEC mode.

show sd-routing control connections summary

This command has no arguments or keywords.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, and Cisco 1000 Series Integrated Services Routers.

Usage Guidelines

When compared to the output of the **show sd-routing control connections details** command, the output of **show sd-routing control connections summary** command excludes detailed Tx and Rx statistics related to each control connection.

The following is sample output of the **show sd-routing control connections summary** command:

```
Device# show sd-routing control connections summary

                     PEER                                          PEER

show sd-routing control local-properties summary

To display the summary of the status of a device and root certificate installation in the SD routing mode, use the **show sd-routing control local-properties summary** command in privileged EXEC mode.

show sd-routing control local-properties summary

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the status of a device and root certificate installation of WAN interfaces.

Example

The following is sample output of the **show sd-routing control local-properties summary** command:

```
Device#show sd-routing control local-properties summary
 personality                      vedge

```

show sd-routing control local-properties vbond

To display vBond-related information about local control properties of WAN interfaces in the SD routing mode, use the **show sd-routing control local-properties vbond** command in privileged EXEC mode.

show sd-routing control local-properties vbond

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the vBond information about local control properties of WAN interfaces.

Example

The following is sample output of the **show sd-routing control local-properties vbond** command:

```
Device#show sd-routing control local-properties vbond
 INDEX    IP                                        PORT
-----------------------------------------------------------
0        10.0.12.26                                12346
1        2001:a0:c::1a                             12346
```

show sd-routing control local-properties wan detail

To display detailed information about local control properties of WAN interfaces in the SD routing mode use the **show sd-routing control local-properties wan detail** command in privileged EXEC mode.

show sd-routing control local-properties wan detail

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

The NAT type information is displayed only when two or more vBonds are configured.

Example

The following is sample output of the **show sd-routing control local-properties wan detail** command:

```
Device#show sd-routing control local-properties wan detail
NAT Type: E -- indicates End-point independent mapping
          A -- indicates Address-port dependent mapping
          N -- indicates Not learned
          Note: Requires minimum two vbonds to learn the NAT type

Interface GigabitEthernet1
  Public  IPv4       : 50.0.1.14
  Public  Port       : 65104
  Private IPv4       : 50.0.1.14
  Private IPv6       : 2001:320:1::e
  Private Port       : 65104
  State              : up
  Number of vManages : 1
  Control            : yes
  STUN               : no
  Low Bandwidth Link : no
  Last Connection    : 0:05:23:05
  SPI Remaining Time : 0:00:00:00
  NAT Type           : N
  vManage Connection : 5
  Region IDs         : 0
```

show sd-routing control local-properties wan ipv4

To display IPv4 related information about local control properties of WAN interfaces in the SD routing mode use the **show sd-routing control local-properties wan ipv4** command in privileged EXEC mode.

show sd-routing control local-properties wan ipv6

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

Example

The following is sample output of the **show sd-routing control local-properties wan ipv4** command:

```
Device#show sd-routing control local-properties wan ipv6
 PUBLIC           PUBLIC  PRIVATE          PRIVATE
INTERFACE                      IPv4             PORT    IPv4             PORT     STATE
-------------------------------------------------------------------------------------
GigabitEthernet1               50.0.1.14        65314   50.0.1.14        65314    up
```

show sd-routing control local-properties wan ipv6

To display IPv6 related information about local control properties of WAN interfaces in the SD routing mode use the **show sd-routing control local-properties wan ipv6** command in privileged EXEC mode.

show sd-routing control local-properties wan ipv6

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

Example

The following is sample output of the **show sd-routing control local-properties wan ipv6** command:

```
Device#show sd-routing control local-properties wan ipv6
                                PUBLIC  PRIVATE                                 PRIVATE
INTERFACE                       PORT    IPv6                                    PORT
STATE
-------------------------------------------------------------------------------------------
GigabitEthernet1                65314   2001:320:1::e                           65314
up
```

show sd-routing system status

To display the system status information of WAN interfaces in the SD routing mode, use the **show sd-routing system status** command in privileged EXEC mode.

show sd-routing system status

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE 17.12.1a	This command was introduced on Cisco Catalyst 8200, 8300, and 8500 Series Edge Platforms, Cisco Catalyst 8000V Edge Software, Cisco 4000 Series Integrated Services Routers, Cisco 1000 Series Integrated Services Routers, and Cisco ASR 1000 Series Aggregation Services Router .

Usage Guidelines

You can use this command when you are onboarding a device. The output helps you verify the status of a device.

Example

The following is sample output of the **show sd-routing system status** command:

```
