

# Configuring the HTTP Server

---

This chapter contains the following sections:

- [Information About the HTTP Server, on page 1](#)
- [Guidelines and Limitations for the HTTP Server, on page 1](#)
- [Disabling HTTPS, on page 1](#)
- [Disabling HTTP, on page 2](#)
- [Installing Certificates, on page 3](#)

## Information About the HTTP Server

An HTTP server, which can be turned off from the CLI to address security concerns, is embedded in the Virtual Supervisor Module (VSM).

## Guidelines and Limitations for the HTTP Server

- The HTTP server is enabled by default.
- The HTTP server must be enabled in order to get the Cisco Nexus 1000VE XML plugin from the VSM.

## Disabling HTTPS

### Before you begin

- Ensure that feature http-server is enabled.
- Ensure that vnm-pa is uninstalled and nsmgr is disabled.

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	switch# <b>configure terminal</b>	Enters global configuration mode.

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 2</b>	switch# <b>http-server no https</b>	Disables the HTTPS service.
<b>Step 3</b>	(Optional) switch(config)# <b>show http-server</b>	Displays the HTTP server configuration.
<b>Step 4</b>	(Optional) switch(config)# <b>Show feature</b>	Displays the state (enabled or disabled) of each available feature.

**Example**

```

switch# configure terminal
switch(config)# http-server no https
httpd: no process killed
switch(config)# show http-server
http-server enabled
  http protocol enabled
  https protocol disabled
switch(config)# show feature
Feature Name           Instance  State
-----
http-server             1        enabled
.
.
.
switch(config)#

```

# Disabling HTTP

**Before you begin**

- Ensure that feature http-server is enabled.

**Procedure**

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	switch# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 2</b>	switch# <b>http-server no http</b>	Disables the HTTP service.
<b>Step 3</b>	(Optional) switch(config)# <b>show http-server</b>	Displays the HTTP server configuration.
<b>Step 4</b>	(Optional) switch(config)# <b>Show feature</b>	Displays the state (enabled or disabled) of each available feature.

**Example**

```

switch# configure terminal
switch(config)# http-server no http
httpd: no process killed
switch(config)# show http-server

```

```

http-server enabled
http protocol disabled
https protocol enabled

switch(config)# show feature
Feature Name           Instance State
-----
http-server             1         enabled
.
.
.
switch(config)#

```

## Installing Certificates

Certificates are sent to the browser or server and contain public keys needed to begin a secure session.

### Installing the HTTP-Server Certificate

To install an HTTP-server certificate, use the **install http-certificate** command.

#### Procedure

	Command or Action	Purpose
<b>Step 1</b>	switch# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 2</b>	switch# <b>install http-certificate {bootflash: [/server/]   default}</b>	<p>Installs the certificate where {bootflash: [/server/]   default} specifies the source or destination URL for boot flash memory. To regenerate an expired default certificate, use the <b>install http-certificate default</b> command.</p> <p><b>Note</b> File extensions with .crt and .pem are supported.</p>

#### Example

This example shows how to install an HTTP certificate to the boot flash memory:

```

switch# configure terminal
switch(config-svs-conn)# install http-certificate bootflash:new.crt

```

### Installing the SVS-Connection Certificate

To install a certificate for SVS-connection, use the **install certificate** command.

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	switch# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 2</b>	switch(config)# <b>svs connection vcenter</b>	Establishes vCenter connection.
<b>Step 3</b>	switch(config-svs-conn)# <b>install certificate {bootflash: [/&lt;server&gt;]   default}</b>	Installs the certificate where {bootflash: [/<server>]   default} specifies the source or destination URL for boot flash memory.  <b>Note</b> File extensions with .crt and .pem are supported.

### Example

This example shows how to install a certificate to the boot flash memory:

```
switch# configure terminal
switch(config)# svs connection vcenter
switch(config-svs-conn)# install certificate bootflash:new.crt
```
