

Send document comments to vsg-docfeedback@cisco.com.

CHAPTER **1**

Cisco Nexus 1000V Series Switch Commands

This chapter provides information about the VSG-related commands on the Nexus 1000V Switch.

■ clear vsn connection

Send document comments to vsg-docfeedback@cisco.com.

clear vsn connection

To clear VSG connections, use the **clear vsn connection** command.

clear vsn connection [module *module-number*]

Syntax Description	module (Optional) Clears a specific module. <i>module-number</i> (Optional) Module number. The range of values is from 3 to 66.
---------------------------	---

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to clear VSG connections:
	vsm# clear vsn connection

Related Commands	Command	Description
	show vsn	Displays VSG information.

Send document comments to vsg-docfeedback@cisco.com.

clear vsn statistics

To clear VSG statistics, use the **clear vsn statistics** command.

```
clear vsn statistics [module module-number | vlan vlan-number ip ip-address [module module-number]]
```

Syntax Description	module (Optional) Clears a module. module-number (Optional) Module number. The range of values is from 3 to 66. vlan (Optional) Clears a VLAN. vlan-number (Optional) VLAN number. ip (Optional) Clears a device at a specific IP address. ip-address (Optional) IP address. The format is A.B.C.D.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to clear VSG statistics: vsm# clear vsn statistics
-----------------	---

Related Commands	Command	Description
	show vsn	Displays VSG information.

switchport mode

Send document comments to vsg-docfeedback@cisco.com.

switchport mode

To set the port mode of an interface, use the **switchport mode** command. To remove the port mode configuration, use the **no** form of this command.

switchport mode {access | private-vlan {host | promiscuous} | trunk}

no switchport mode {access | private-vlan {host | promiscuous} | trunk}

Syntax Description	
access	Sets the port mode access.
private-vlan	Sets the port mode to private VLAN.
host	Sets the port mode private VLAN to host.
promiscuous	Sets the port mode private VLAN to promiscuous.
trunk	Sets the port mode to trunk.

Defaults	Switchport mode is not set.
-----------------	-----------------------------

Command Modes	Interface configuration (config-if) Port profile configuration (config-port-prof)
----------------------	--

SupportedUserRoles	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to set the port mode of an interface:
	<pre>vsm# configure vsm(config)# interface vethernet 1 vsm(config-if)# switchport mode private-vlan host vsm(config-if)#</pre>

This example shows how to remove the mode configuration:

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# no switchport mode private-vlan host
vsm(config-if)#
```

Related Commands	Command	Description
	show interface	Displays interface information.

Send document comments to vsg-docfeedback@cisco.com.

switchport access vlan

To set the access mode of an interface, use the **switchport access vlan** command. To remove the access mode configuration, use the **no** form of this command.

switchport access vlan *vlan-id*

no switchport access vlan *vlan-id*

Syntax Description	<i>vlan-id</i> VLAN identification number. The range of values is from 1 to 3967.
---------------------------	---

Defaults	Access mode is not set.
-----------------	-------------------------

Command Modes	Interface configuration (config-if) Port profile configuration (config-port-prof)
----------------------	--

SupportedUserRoles	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to set the access mode of an interface:
-----------------	--

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# switchport access vlan 100
vsm(config-if)#

```

This example shows how to remove the access mode configuration:

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# no switchport access vlan
vsm(config-if)#

```

Related Commands	Command	Description
	show interface	Displays interface information.

state (port profile)

Send document comments to vsg-docfeedback@cisco.com.

state (port profile)

To enable the operational state of a port profile, use the **state** command. To disable the operational state of a port profile, use the **no** form of the command.

state enabled

no state enabled

Syntax Description	enabled	Enables or disables the port profile.
Defaults	Disabled	
Command Modes	Port profile configuration (config-port-prof)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
Examples	This example shows how to enable the operational state of a port profile:	
	<pre>vsm# configure vsm(config)# port-profile testprofile vsm(config-port-prof)# state enabled vsm(config-port-prof)# </pre>	
Related Commands	Command	Description
	show port-profile	Displays port profile information.

Send document comments to vsg-docfeedback@cisco.com.

copy running-config startup-config

To copy the running configuration to the startup configuration, use the **copy running-config startup-config** command.

copy running-config startup-config

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes Any command mode

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines Use this command to save configuration changes in the running configuration to the startup configuration in persistent memory. When a device reload or switchover occurs, the saved configuration is applied.

Examples This example shows how to save the running configuration to the startup configuration:

```
vsm# copy running-config startup-config
[#####] 100%
```

Related Commands	Command	Description
	show running-config	Displays the running configuration.
	show running-config diff	Displays the differences between the running configuration and the startup configuration.
	show startup-config	Displays the startup configuration.
	write erase	Erases the startup configuration in the persistent memory.

vnm-policy-agent

Send document comments to vsg-docfeedback@cisco.com.

vnm-policy-agent

To enter Virtual Network Management Center (VNMC) policy agent mode, use the **vnm-policy-agent** command.

vnm-policy-agent

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines Use the VNMC policy agent configuration mode to configure policy agents.

Examples This example shows how enter policy agent mode:

```
vsm# configure
vsm(config)# vnm-policy-agent
vsm(config-vnm-policy-agent)#
```

Related Commands	Command	Description
	configure	Enters global configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

log-level

To set logging severity levels for the Virtual Network Management Center (VNMC) policy agent, use the **log-level** command. To reset logging levels, use the **no** form of the command.

```
log-level {critical | debug0 | debug1 | debug2 | debug3 | debug4 | info | major | minor | warn}

no {critical | debug0 | debug1 | debug2 | debug3 | debug4 | info | major | minor | warn}
```

Syntax Description	critical Sets the logging level to critical.
debug0	Sets the logging level to debug 0.
debug1	Sets the logging level to debug 1.
debug2	Sets the logging level to debug 2.
debug3	Sets the logging level to debug 3.
debug4	Sets the logging level to debug 4.
info	Sets the logging level to information.
major	Sets the logging level to major.
minor	Sets the logging level to minor.
warn	Sets the logging level to warning.

Command Default	None				
Command Modes	VNMC policy agent configuration (config-vnm-policy-agent)				
SupportedUserRoles	network-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification				
4.0(4)SV1(1)	This command was introduced.				

Examples This example shows how to set the logging level to critical:

```
vsm# configure
vsm(config)# vnm-policy-agent
vsm(config-vnm-policy-agent)# log-level critical
```

log-level

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	vnm-policy-agent	Enables the VNM policy agent configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

policy-agent-image

To designate the policy agent image local URL as bootflash, use the **policy-agent-image** command. To remove the designation, use the no form of the command.

policy-agent-image bootflash:

no policy-agent-image bootflash:

Syntax Description	bootflash: Designates the policy agent image local URL as bootflash.				
Command Default	None				
Command Modes	VNMC policy agent configuration (config-vnm-policy-agent)				
SupportedUserRoles	network-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification				
4.0(4)SV1(1)	This command was introduced.				
Examples	<p>This example shows how to designate the local URL that contains the policy agent image:</p> <pre>vsm# configure vsm(config)# vnm-policy-agent vsm(config-vnm-policy-agent)# policy-agent-image bootflash:</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>vnm-policy-agent</td> <td>Enables the VNM policy agent configuration mode.</td> </tr> </tbody> </table>	Command	Description	vnm-policy-agent	Enables the VNM policy agent configuration mode.
Command	Description				
vnm-policy-agent	Enables the VNM policy agent configuration mode.				

pop

Send document comments to vsg-docfeedback@cisco.com.

pop

To pop a mode off the stack or to restore a mode, use the **pop** command.

pop *file-name*

Syntax Description	<i>file-name</i>	File name.
---------------------------	------------------	------------

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

SupportedUserRoles	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to restore from a file called file1:
-----------------	---

```
vsm# pop file1
```

Related Commands	Command	Description
	push	Pushes the current mode onto the stack.

Send document comments to vsg-docfeedback@cisco.com.

push

To push the current mode onto stack or to save it, use the **push** command.

push *file-name*

Syntax Description	<i>file-name</i>	File name.
---------------------------	------------------	------------

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

SupportedUserRoles	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	The following example shows how to push file1 onto the stack:
-----------------	---

```
vsm# push file1
```

Related Commands	Command	Description
	pop	Pops the current mode off the stack.

registration-ip

Send document comments to vsg-docfeedback@cisco.com.

registration-ip

To set the service registry IP address, use the **registration-ip** command. To discard the service registry IP address, use the **no** form of the command.

registration-ip ip-address

no registration-ip ip-address

Syntax Description	<i>ip-address</i>	Service registry IP address. The format is A.B.C.D.				
Command Default	None					
Command Modes	VNMC policy agent configuration mode (config-vnm-policy-agent)					
Supported User Roles	network-admin					
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>		Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification					
4.0(4)SV1(1)	This command was introduced.					
Examples	<p>This example shows how to set the service registry IP address:</p> <pre>vsm# configure vsm(config)# vnm-policy-agent vsm(config-vnm-policy-agent)# registration-ip 209.165.200.233 vsm(config-vnm-policy-agent)# </pre>					
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>vnm-policy-agent</td> <td>Enters the VNM policy agent configuration mode.</td> </tr> </tbody> </table>		Command	Description	vnm-policy-agent	Enters the VNM policy agent configuration mode.
Command	Description					
vnm-policy-agent	Enters the VNM policy agent configuration mode.					

Send document comments to vsg-docfeedback@cisco.com.

shared-secret

To set the shared secret password for communication between the Virtual Security Gateway (VSG), the Virtual Supervisor Module (VSM), and the Virtual Network Manager Center (VNMC), use the **shared-secret** command. To discard the shared secret password, use the **no** form of the command.

shared-secret *shared-secret-password*

no shared-secret *shared-secret-password*

Syntax Description	<i>shared-secret-password</i> Shared secret password. The range of valid values is from 1 to 64. You must use at least one upper case character.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	VNM policy agent configuration mode (config-vnm-policy-agent)
----------------------	---

SupportedUserRoles	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines	None
-------------------------	------

Examples	The following example shows how to set the shared secret password:
<pre>vsm# configure vsm(config)# vnm-policy-agent vsm(config-vnm-policy-agent)# shared-secret password123 vsm(config-vnm-policy-agent)#</pre>	

Related Commands	Command	Description
	vnm-policy-agent	Enters VNM policy agent configuration mode.

 show vnm-pa status

Send document comments to vsg-docfeedback@cisco.com.

show vnm-pa status

To display the installation status of a policy agent, use the **show vnm-pa status** command.

show vnm-pa status

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vnm-pa status** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the installation status of the policy agent:

```
vsm# configure
vsm(config)# show vnm-pa status
VNM Policy-Agent status is - Installed Successfully. Version 1.0(0.512)-vsm
vsm(config)#
```

Related Commands	Command	Description
	vnm-policy-agent	Enters VNMC policy agent configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

port-profile

To create a port profile and enter port profile configuration mode, use the **port-profile** command. To remove the port profile configuration, use the **no** form of the command.

port-profile *profile-name*

no port-profile *profile-name*

Syntax Description	<i>profile-name</i>	Port profile name. The range of valid values is from 1 to 80.				
Defaults	None					
Command Modes	Global configuration (config)					
SupportedUserRoles	network-admin					
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>		Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification					
4.0(4)SV1(1)	This command was introduced.					
Usage Guidelines	The port profile name must be unique for each port profile.					
Examples	<p>This example shows how to create a port profile called AccessProf:</p> <pre>vsm# configure vsm(config)# port-profile AccessProf vsm(config-port-prof)# </pre> <p>This example shows how to remove the port profile called AccessProf:</p> <pre>vsm# configure vsm(config)# no port-profile AccessProf vsm(config)# </pre>					
Related Commands	Command	Description				
	show port-profile	Displays information about the port profiles.				

show running-config

Send document comments to vsg-docfeedback@cisco.com.

show running-config

To display the running configuration, use the **show running-config** command.

```
show running-config [aaa | aclmgr | all | am | arp | cdp | diff | exclude | expand-port-profile |
    icmpv6 | igmp | interface | ip | ipqos | ipv6 | l3vm | license | monitor | ntp | port-profile |
    port-security | radius | rpm | security | snmp | vdc-all | vlan | vshd]
```

Syntax Description	
aaa	(Optional) Displays the Authentication, Authorization and Accounting (AAA) configuration.
aclmgr	(Optional) Displays the running configuration for Access Control List (ACL) manager.
all	(Optional) Displays the current operating configurations.
am	(Optional) Displays Application Management (AM) information.
arp	(Optional) Displays Address Resolution Protocol (ARP) information.
cdp	(Optional) Displays the Cisco Discovery Protocol (CDP) configuration.
diff	(Optional) Displays the difference between the running and startup configurations.
exclude	(Optional) Excludes the running configuration of specified features.
expand-port-profile	(Optional) Displays port profile information.
icmpv6	(Optional) Displays Internet Control Message Protocol (ICMPv6) information.
igmp	(Optional) Displays Internet Group Management Protocol (IGMP) information.
interface	(Optional) Displays interface configurations.
ip	(Optional) Displays Internet Protocol (IP) information.
ipqos	(Optional) Displays the running configuration for the IP Quality of Service (QoS) manager.
ipv6	(Optional) Displays IPv6 information.
l3vm	(Optional) Displays Layer 3 Virtual Machine (L3VM) information
license	(Optional) Displays the licensing configuration.
monitor	(Optional) Displays Ethernet Switched Port Analyzer (SPAN) session information.
ntp	(Optional) Displays Network Time Protocol (NTP) information.
port-profile	(Optional) Displays port-profile configurations.
port-security	(Optional) Displays port-security configurations.
radius	(Optional) Displays the Remote Authentication Dial In User Service (RADIUS) configuration.
rpm	(Optional) Displays RPM information
security	(Optional) Displays the security configurations.
snmp	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
vdc-all	(Optional) Displays all VDC configurations.

Send document comments to vsg-docfeedback@cisco.com.

vlan	(Optional) Displays Virtual Large Area Network (VLAN) information.
vshd	(Optional) Displays the running configuration for VSHD.

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show running-config command:
-------------------------	--

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples	This example shows how to display the running configuration:
-----------------	--

```
vsm# show running-config

!Command: show running-config
!Time: Tue Jan 4 17:20:05 2011

version 4.2(1)SV1(4)
no feature telnet

username admin password 5 $1$z3M0/3no$j77mpF9f/mqmd7/mEZ6RR1 role network-admin
username adminbackup password 5 $1$Oip/C5Ci$oOdx7oJS1BCFpNRmQK4na. role network-operator

vn-service ip-address

To assign a data IP address, a VLAN number, and a profile to a VSG, use the **vn-service ip-address** command. To disable the data IP address, use the **no** form of the command.

vn-service ip-address ip-address vlan vlan-number [fail {close | open} | security-profile profile-name]

no vn-service ip-address ip-address vlan vlan-number [fail {close | open} | security-profile profile-name]

Syntax Description	<i>ip-address</i>	IP address. The format is A.B.C.D.
vlan <i>vlan-number</i>		Service VLAN number. The range of values is from 1 to 3967 and 4048 to 4093.
fail		States are either fail close or fail open.
close		Drops packets if the VSG is down.
open		Passes tpackets through if the VSG is down.
security-profile <i>profile-name</i>		Security profile name.

Command Default Fail close.

Command Modes Port profile configuration (config-port-prof)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines This command configures the IP, VLAN, and security-profile for the VSG, and optionally allows for a fail safe configuration.

Fail mode specifies what the behavior is when the VEM does not have connectivity to the VSG. The default fail mode is **close**, which means that the packets will be forwarded. **open** fail mode means that packets will be dropped.

The security profile name must match one of the security profiles created on the VSG.

The IP address must match the data interface IP address on the VSG.

Examples This example shows how to assign the IP address and VLAN number, and how to specify that packets are to be dropped:

```
vsm# configure
```

■ **vn-service ip-address**

Send document comments to vsg-docfeedback@cisco.com.

Enter configuration commands, one per line. End with CNTL/Z.

```
vsm(config)# port-profile pp1
vsm(config-port-prof)# vn-service ip-address 209.165.200.236 vlan 2 fail open
vsm(config-port-prof)#+
```

Related Commands	Command	Description
	show virtual-service-domain	Displays virtual service domain information.

Send document comments to vsg-docfeedback@cisco.com.

org

To create a VNMC organization (domain), use the **org** command. To delete a VNMC organization, use the **no** form of the command.

org *organization-name*

no org [*organization-name*]

Syntax Description	<i>organization-name</i> The organization name. The range of values is from 1 to 251.				
Command Default	None				
Command Modes	Port profile configuration (config-port-prof)				
SupportedUserRoles	network-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification				
4.0(4)SV1(1)	This command was introduced.				
Usage Guidelines	VNMC organizations are VNMC domains. You can hierarchically manage VNMC organizations. A user that is assigned at a top level organization has automatic access to all organizations under it. For example, an engineering organization can contain a software engineering organization and a hardware engineering organization. A locale containing only the software engineering organization has access to system resources only within that organization. However, a locale that contains the engineering organization has access to the resources for both the software engineering and hardware engineering organizations.				
Examples	This example shows how to create an organization: <pre>vsm# configure Enter configuration commands, one per line. End with CNTL/Z. vsm(config)# port-profile pP1 vsm(config-port-prof)# org orgpP1 vsm(config-port-prof)#</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th><th>Description</th></tr> </thead> <tbody> <tr> <td>vn-service</td><td>Sets the IP address for a virtual firewall.</td></tr> </tbody> </table>	Command	Description	vn-service	Sets the IP address for a virtual firewall.
Command	Description				
vn-service	Sets the IP address for a virtual firewall.				

show vsn brief

Send document comments to vsg-docfeedback@cisco.com.

show vsn brief

To display a brief amount of information about the Cisco Virtual Security Gateway (VSG), use the **show vsn brief** command.

show vsn brief

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsn brief** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display information about VSGs:

```
vsm# show vsn brief

  VLAN      IP-ADDR          MAC-ADDR   FAIL-MODE  STATE  MODULE
    64      192.168.136.1  00:50:56:bb:00:34    Close     Up   5
    64      192.168.129.2  00:50:56:bb:00:37    Close     Up   3
vsm#
```

Related Commands

vlan

To create a VLAN and enter the VLAN configuration mode, use the **vlan** command. To remove a VLAN, use the **no** form of this command.

```
vlan {id | dot1Q tag native}
no vlan {id | dot1Q tag native}
```

Syntax Description	id VLAN identification number. The range of valid values is from 1 to 4094. dot1Q tag native Specifies an IEEE 802.1Q virtual LAN.				
Defaults	The default VLAN is VLAN 1.				
Command Modes	Global configuration (config)				
SupportedUserRoles	network-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification				
4.0(4)SV1(1)	This command was introduced.				
Usage Guidelines	Specify a VLAN range by using a dash. For example, 1-9 or 20-30.				
Examples	<p>This example shows how to create a VLAN and enter the VLAN configuration mode:</p> <pre>vsm# configure vsm (config)# vlan 100 vsm (config-vlan)# </pre> <p>This example shows how to remove a VLAN:</p> <pre>switch# configure switch(config)# no vlan 100 switch(config)# </pre>
