Cisco Virtual Security Gateway for Nexus 1000V Series Switch Command Reference, Release 4.2(1)VSG1(3.1)

July 02, 2013

Americas Headquarters

Cisco Systems, Inc.
170 West Tasman Drive
San Jose, CA 95134-1706
USA
<http://www.cisco.com>
Tel: 408 526-4000
800 553-NETS (6387)
Fax: 408 527-0883

Text Part Number: OL-25786-01

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The Cisco implementation of TCP header compression is an adaptation of a program developed by the University of California, Berkeley (UCB) as part of UCB's public domain version of the UNIX operating system. All rights reserved. Copyright © 1981, Regents of the University of California.

NOTWITHSTANDING ANY OTHER WARRANTY HEREIN, ALL DOCUMENT FILES AND SOFTWARE OF THESE SUPPLIERS ARE PROVIDED "AS IS" WITH ALL FAULTS. CISCO AND THE ABOVE-NAMED SUPPLIERS DISCLAIM ALL WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THOSE OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OR ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE.

IN NO EVENT SHALL CISCO OR ITS SUPPLIERS BE LIABLE FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES, INCLUDING, WITHOUT LIMITATION, LOST PROFITS OR LOSS OR DAMAGE TO DATA ARISING OUT OF THE USE OR INABILITY TO USE THIS MANUAL, EVEN IF CISCO OR ITS SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Cisco and the Cisco logo are trademarks or registered trademarks of Cisco and/or its affiliates in the U.S. and other countries. To view a list of Cisco trademarks, go to this URL: www.cisco.com/go/trademarks. Third-party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between Cisco and any other company. (1110R)

Any Internet Protocol (IP) addresses used in this document are not intended to be actual addresses. Any examples, command display output, and figures included in the document are shown for illustrative purposes only. Any use of actual IP addresses in illustrative content is unintentional and coincidental.

New and Changed Commands

This section provides release-specific information for the new and changed features in the *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Command Reference, Release 4.2(1)VSG1(3.1)*. The latest version of this document is available at the following Cisco website: <http://www.cisco.com/go/techdocs>.

To check for additional information about Release 4.2(1)VSG1(3.1), see the *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Release Notes, Release 4.2(1)VSG1(3.1)* available at the following Cisco website: <http://www.cisco.com/go/techdocs>.

Table 1 summarizes the new and changed features for the *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Command Reference, Release 4.2(1)VSG1(3.1)*.

Table 1 ***New and Changed Information in Release 4.2(1)VSG1(3.1)***

Feature	Description	Changed in Release	Where Documented
Cisco Nexus 1000V Series switch	Some commands have been modified and new commands have been added to enhance the performance of the Cisco Virtual Security Gateway for the Cisco Nexus 1000V Series switch.	4.2(1)SV1(5.1)	capability l3-vn-service , page 1-2 ping vsn , page 1-8 show vsn brief , page 1-23 show vsn connection , page 1-25 show vsn detail , page 1-27 vn-service ip-address , page 1-39
Show Commands for Cisco Virtual Security Gateway for Cisco Nexus 1000V Series switch	Some commands have been modified to enhance the performance of the Cisco Virtual Security Gateway for the Cisco Nexus 1000V Series switch.	4.2(1)VSG1(3.1)	show ac-driver , page 3-4 show service-path connection , page 3-71 show service-path statistics , page 3-73
Cisco Nexus 1000V Series switch	Some commands have been modified and new commands have been added to enhance the performance of the Cisco Virtual Security Gateway for the Cisco Nexus 1000V Series switch.	4.2(1)SV1(4a)	ping vsn , page 1-8 tcp state-checks , page 1-36 vsn type vsg global , page 1-42

Send document comments to vsg-docfeedback@cisco.com.

Table 1 *New and Changed Information in Release 4.2(1)VSG1(3.1) (continued)*

Feature	Description	Changed in Release	Where Documented
Cisco Virtual Security Gateway for Cisco Nexus 1000V Series switch	Some commands have been modified and new commands have been added to enhance the performance of the Cisco Virtual Security Gateway for the Cisco Nexus 1000V Series switch.	4.2(1)VSG1(2)	action , page 2-2 attribute , page 2-4 condition , page 2-90 event-log service-path , page 2-123 match , page 2-137 object-group , page 2-141 policy , page 2-143 rule , page 2-151 zone , page 2-207
Show Commands for Cisco Virtual Security Gateway for Cisco Nexus 1000V Series switch	Some commands have been modified and new commands have been added to enhance the performance of the Cisco Virtual Security Gateway for the Cisco Nexus 1000V Series switch.	4.2(1)VSG1(2)	show service-path connection , page 3-71 show vsg security-profile , page 3-100 show vsg vm , page 3-102 show vsg vm name , page 3-104 show vsg vm uuid , page 3-106 show vsg zone , page 3-107

Preface

The *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Command Reference, Release 4.2(1)VSG1(3.1)* provides a reference for Cisco Virtual Security Gateway (VSG) CLI commands.

This chapter includes the following sections:

- [Audience, page xv](#)
- [Organization, page xv](#)
- [Document Conventions, page xvi](#)
- [Related Documentation, page xvii](#)
- [Obtaining Documentation and Submitting a Service Request, page xviii](#)

Audience

This reference is for network administrators with the following experience and knowledge:

- VMware vCenter
- VMware vSphere
- VMware ESX and ESXi
- An understanding of virtualization
- Virtual machines

Organization

This document is organized into the following chapters:

Chapter and Title	Description
Chapter 1, “Cisco Nexus 1000V Series Switch Commands”	Provides information about the Cisco VSG commands found on the Cisco Nexus 1000V Series switch and the Cisco Nexus 1010 networking appliance.

Send document comments to vsg-docfeedback@cisco.com.

Chapter and Title	Description
Chapter 2, “Cisco Virtual Security Gateway Commands”	Provides information about Cisco VSG commands.
Chapter 3, “Cisco Virtual Security Gateway Show Commands”	Provides information about Cisco VSG show commands.

Document Conventions

Command descriptions use these conventions:

Convention	Description
boldface font	Commands and keywords are in boldface.
<i>italic font</i>	Arguments for which you supply values are in italics.
[]	Elements in square brackets are optional.
[x y z]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.

Screen examples use these conventions:

Convention	Description
screen font	Terminal sessions and information that the switch displays are in screen font.
boldface screen font	Information you must enter is in boldface screen font.
<i>italic screen font</i>	Arguments for which you supply values are in italic screen font.
< >	Nonprinting characters, such as passwords, are in angle brackets.
[]	Default responses to system prompts are in square brackets.
!, #	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

This document uses the following conventions:

Note

Means reader *take note*. Notes contain helpful suggestions or references to material not covered in the manual.

Caution

Means *reader be careful*. In this situation, you might do something that could result in equipment damage or loss of data.

Send document comments to vsg-docfeedback@cisco.com.

Tip

Means the following information will help you solve a problem.

Related Documentation

This section contains information about the documentation available for Cisco Virtual Security Gateway and related products.

Cisco Virtual Security Gateway Documentation

The following Cisco Virtual Security Gateway for the Nexus 1000V Series Switch documents are available on Cisco.com at the following URL:

http://www.cisco.com/en/US/products/ps13095/tsd_products_support_series_home.html

- *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Release Notes, Release 4.2(1)VSG1(3.1)*
- *Cisco Virtual Security Gateway, Release 4.2(1)VSG1(3.1) and Cisco Virtual Network Management Center, Release 1.3 Installation and Upgrade Guide*
- *Cisco Virtual Security Gateway for Nexus 1000V Series Switch License Configuration Guide, Release 4.2(1)VSG1(3.1)*
- *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Configuration Guide, Release 4.2(1)VSG1(3.1)*
- *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Command Reference, Release 4.2(1)VSG1(3.1)*
- *Cisco Virtual Security Gateway for Nexus 1000V Series Switch Troubleshooting Guide, Release 4.2(1)VSG1(3.1)*

Cisco Virtual Network Management Center Documentation

The following Cisco Virtual Network Management Center documents are available on Cisco.com at the following URL:

http://www.cisco.com/en/US/products/ps11213/tsd_products_support_series_home.html

Cisco Nexus 1000V Series Switch Documentation

The Cisco Nexus 1000V Series Switch documents are available on Cisco.com at the following URL:

http://www.cisco.com/en/US/products/ps9902/tsd_products_support_series_home.html

Send document comments to vsg-docfeedback@cisco.com.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see *What's New in Cisco Product Documentation* at:
<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>.

Subscribe to *What's New in Cisco Product Documentation*, which lists all new and revised Cisco technical documentation, as an RSS feed and deliver content directly to your desktop using a reader application. The RSS feeds are a free service.

Send document comments to vsg-docfeedback@cisco.com.

CHAPTER 1

Cisco Nexus 1000V Series Switch Commands

This chapter provides information about the Cisco Virtual Security Gateway (VSG) related commands on the Cisco Nexus 1000V Series switch and the Cisco Nexus 1010 networking appliance.

Send document comments to vsg-docfeedback@cisco.com.

capability l3-vn-service

To configure a port profile to be used with l3-vn-service, use the **capability l3-vn-service** command. To remove the capability from a port profile, use the **no** form of this command.

capability l3-vn-service

no capability l3-vn service

Syntax Description	l3-vn-service	Configure vmknic to carry l3-vn-service traffic.
--------------------	----------------------	--

Defaults	None
----------	------

Command Modes	Port-profile configuration (config-port-prof) network-admin
---------------	--

Command History	Release	Modification
	4.2.1SV1(5.1)	This command was introduced.

Usage Guidelines	<p>If you are configuring a port profile for l3-vn-service, you must first configure the port profile in switchport mode.</p> <p>The capability iscsi-multipath feature cannot be configured with the capability l3-vn-service feature.</p>
------------------	--

Examples	<p>This example shows how to configure a port profile to be used with l3-vn-service:</p> <pre>n1000v# config t n1000v(config)# port-profile testprofile n1000v(config-port-prof)# switchport mode access n1000v(config-port-prof)# capability l3-vn-service n1000v(config-port-prof)#</pre> <p>This example shows how to remove the l3-vn-service configuration from the port profile:</p> <pre>n1000v# config t n1000v(config)# port-profile testprofile n1000v(config-port-prof)# no capability l3-vn-service n1000v(config-port-prof)#</pre>
----------	---

Related Commands	Command	Description
	show port-profile	Displays information about the port profiles.

Send document comments to vsg-docfeedback@cisco.com.

clear vsn connection

To clear Cisco VSG connections, use the **clear vsn connection** command.

```
clear vsn connection [module module-number]
```

Syntax Description	module	(Optional) Clears a specific module.
	<i>module-number</i>	Module number. The range is from 3 to 66.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to clear Cisco VSG connections: <pre>vsm# clear vsn connection</pre>
----------	--

Related Commands	Command	Description
	show vsn	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

clear vsn statistics

To clear Cisco VSG statistics, use the **clear vsn statistics** command.

```
clear vsn statistics [module module-number | vlan vlan-number ip ip-address [module
module-number]]
```

Syntax Description	module	(Optional) Clears a module.
	<i>module-number</i>	Module number. The range of values is from 3 to 66.
	vlan	(Optional) Clears a VLAN.
	<i>vlan-number</i>	VLAN number.
	ip	(Optional) Clears a device at a specific IP address.
	<i>ip-address</i>	IP address. The format is A.B.C.D.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples This example shows how to clear Cisco VSG statistics:
vsm# **clear vsn statistics**

Related Commands	Command	Description
	show vsn	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

copy running-config startup-config

To copy the running configuration to the startup configuration, use the **copy running-config startup-config** command.

copy running-config startup-config

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes Any command mode

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines Use this command to save configuration changes in the running configuration to the startup configuration in persistent memory. When a device reload or switchover occurs, the saved configuration is applied.

Examples This example shows how to save the running configuration to the startup configuration:

```
vsm# copy running-config startup-config
[#####] 100%
```

Related Commands	Command	Description
	show running-config	Displays the running configuration.
	show running-config diff	Displays the differences between the running configuration and the startup configuration.
	show startup-config	Displays the startup configuration.
	write erase	Erases the startup configuration in the persistent memory.

Send document comments to vsg-docfeedback@cisco.com.

log-level

To set logging severity levels for the Cisco Virtual Network Management Center (VNMC) policy agent, use the **log-level** command. To reset logging levels, use the **no** form of this command.

log-level { **critical** | **debug0** | **debug1** | **debug2** | **debug3** | **debug4** | **info** | **major** | **minor** | **warn** }

no { **critical** | **debug0** | **debug1** | **debug2** | **debug3** | **debug4** | **info** | **major** | **minor** | **warn** }

Syntax Description

critical	Sets the logging level to critical.
debug0	Sets the logging level to debug 0.
debug1	Sets the logging level to debug 1.
debug2	Sets the logging level to debug 2.
debug3	Sets the logging level to debug 3.
debug4	Sets the logging level to debug 4.
info	Sets the logging level to information.
major	Sets the logging level to major.
minor	Sets the logging level to minor.
warn	Sets the logging level to warning.

Command Default

None

Command Modes

Cisco VNMC policy agent configuration (config-vnm-policy-agent)

Supported User Roles

network-admin

Command History

Release	Modification
4.0(4)SV1(1)	This command was introduced.

Examples

This example shows how to set the logging level to critical:

```
vsm# configure
vsm(config)# vnm-policy-agent
vsm(config-vnm-policy-agent)# log-level critical
```

Related Commands

Command	Description
vnm-policy-agent	Enables the Cisco VNMC policy agent configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

org

To create a Cisco VNMC organization (domain), use the **org** command. To delete a Cisco VNMC organization, use the **no** form of the command.

org *organization-name*

no org [*organization-name*]

Syntax Description

<i>organization-name</i>	Organization name. The range of values is from 1 to 251.
--------------------------	--

Command Default

None

Command Modes

Port profile configuration (config-port-prof)

Supported User Roles

network-admin

Command History

Release	Modification
4.0(4)SV1(1)	This command was introduced.

Usage Guidelines

Cisco VNMC organizations are Cisco VNMC domains.

You can hierarchically manage Cisco VNMC organizations. A user that is assigned at a top level organization has automatic access to all organizations under it. For example, an engineering organization can contain a software engineering organization and a hardware engineering organization. A locale containing only the software engineering organization has access to system resources only within that organization. However, a locale that contains the engineering organization has access to the resources for both the software engineering and hardware engineering organizations.

Examples

This example shows how to create an organization:

```
vsm# configure
Enter configuration commands, one per line. End with CNTL/Z.
vsm(config)# port-profile pP1
vsm(config-port-prof)# org orgpP1
vsm(config-port-prof)#
```

Related Commands

Command	Description
vn-service	Sets the IP address for a virtual firewall.

Send document comments to vsg-docfeedback@cisco.com.

ping vsn

To ping the virtual service nodes (VSN) (including the Cisco VSG) from the vPath, use the **ping vsn** command. There is no **no** form of this command.

ping vsn {**ip** *vsn-ip-addr* [**vlan** *vsn-vlan-num*] | **all**} {**src-module** {*module-num* | **all** | **vpath-all**} [**timeout** *secs*] [**count** *count*]}

Syntax Description

ip	Designates that a specific IP address is to be pinged.
<i>vsn-ip-addr</i>	IP address of the specific VSN.
vlan	(Optional) Designates a specific VLAN is to be pinged.
<i>vsn-vlan-num</i>	Specific VLAN number.
all	Indicates that all VSNs must be pinged.
src-module	Designates the source module for the ping.
<i>module-num</i>	Module number for the source path.
vpath all	Designates that all source vPaths will be used.
timeout	(Optional) Designates a timeout.
<i>secs</i>	Duration of the pinging operation in seconds.
count	(Optional) Designates a count of pings.
<i>count</i>	Number of pings to be counted.

Command Default

None

Command Modes

EXEC

Supported User Roles

network-admin

Command History

Release	Modification
4.2(1)VSG(3.1)	The output of the ping-vsn command was changed to include the examples that show all of the source module traffic.
4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines

There is no **no** form of this command.

Examples

This example shows how to ping a Cisco VSG:

```
vsm# ping ?
<CR>
A.B.C.D or Hostname IP address of remote system
WORD                Enter Hostname
```

Send document comments to vsg-docfeedback@cisco.com.

```

mpls                Ping an MPLS network
multicast           Multicast ping
vsn                 VSNS to be pinged

```

vsm# **ping vsn**

Input parameters:

- vsn : VSNS to be pinged.
- o all : All VSNS that are currently associated to at least one VM. In other words, all VSNS specified in port-profiles that are bound to at least one VM.
- o ip-addr <ip-addr> : All VSNS configured with this IP address.
- o vlan <vlan-num> : All VSNS configured on this VLAN.
- src-module : Source modules to originate ping request from.
- o all : All online modules.
- o vpath-all : All modules having VMs associated to port-profiles that has vn-service defined.
- o <module-num> : A online module number.
- timeout <secs> : Time to wait for response from VSNS, in seconds. Default is 1 sec.
- count : Number of ping packets to be sent.
- o <count> : Specifies number of ping packets to be sent. Default is 5. Min 1, Max 2147483647.
- o unlimited : Send ping packets until command is stopped.

Specify both the IP address and VLAN if the VSN to be pinged is not associated to any VMs yet.

In the output, the status of the ping request for each VSN for each module is shown. On a successful ping, the round-trip-time of ping request/response for a VSN is shown in microseconds next to the module number. On a failure, the failure message is shown next to the module number.

Various forms:

```

ping vsn all src-module all                (Ping all VSNS from all modules)
ping vsn all src-module vpath-all         (Ping all VSNS from all modules having
                                           VMs associated to VSNS)
ping vsn all src-module 3                 (Ping all VSNS from the specified module)
ping vsn ip 106.1.1.1 src-module all      (Ping specified VSN from all modules)
ping vsn ip 106.1.1.1 vlan 54 src-module all (Ping specified VSN from all modules
                                           having VMs associated to VSNS)
ping vsn ip 106.1.1.1 vlan 54 src-module 3 (Ping specified VSN from specified
                                           module)

```

The options timeout and count apply to all of the above commands:

```

ping vsn all src-vpath all timeout 2 count 10
ping vsn all ip 106.1.1.1 count unlimited
ping vsn ip 106.1.1.1 vlan 54 src-vpath 3 count 10

```

Errors:

```

VSN response timeout - VSN is down, not reachable or not responding.
VSN ARP not resolved - VEM couldn't resolve MAC address of VSN.
no response from VEM - VEM is not sending ping response to VSM. Can happen when VEM
is down and VSM not detected it yet.

```

These examples show how to display all of the source module traffic:

```

vsm# ping vsn all src-module all
ping vsn 10.1.1.44 vlan 501 from module 9 10 11 12, seq=0 timeout=1-sec
  module(usec)      : 9(508)
  module(failed)    : 10(VSN ARP not resolved) 11(VSN ARP not resolved)
                    : 12(VSN ARP not resolved)
ping vsn 10.1.1.40 vlan 0 from module 9 10 11 12, seq=0 timeout=1-sec
  module(usec)      : 9(974) 11(987) 12(1007)
  module(failed)    : 10(VSN ARP not resolved)

```

Send document comments to vsg-docfeedback@cisco.com.

```

vsm#

```

Related Commands

Command	Description
ping	Activates a signal to verify connections with other devices on a path.

Send document comments to vsg-docfeedback@cisco.com.

policy-agent-image

To designate the policy agent image local URL as bootflash, use the **policy-agent-image** command. To remove the designation, use the no form of the command.

policy-agent-image bootflash:

no policy-agent-image bootflash:

Syntax Description	bootflash:	Designates the policy agent image local URL as bootflash.
Command Default	None	
Command Modes	VNMC policy agent configuration (config-vnm-policy-agent)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
Examples	<p>This example shows how to designate the local URL that contains the policy agent image:</p> <pre>vsm# configure vsm(config)# vnm-policy-agent vsm(config-vnm-policy-agent)# policy-agent-image bootflash:</pre>	
Related Commands	Command	Description
	vnm-policy-agent	Enables the VNM policy agent configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

pop

To pop a mode off the stack or to restore a mode, use the **pop** command.

pop *file-name*

Syntax Description	<i>file-name</i>	Name of the file.
--------------------	------------------	-------------------

Command Default	None
-----------------	------

Command Modes	EXEC
---------------	------

SupportedUserRoles	network-admin
--------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to restore from a file called file1: vsm# pop file1
----------	--

Related Commands	Command	Description
	push	Pushes the current mode onto the stack.

Send document comments to vsg-docfeedback@cisco.com.

port-profile

To create a port profile and enter port profile configuration mode, use the **port-profile** command. To remove the port profile configuration, use the **no** form of this command.

port-profile *profile-name*

no port-profile *profile-name*

Syntax Description	<i>profile-name</i>	Port profile name. The range of valid values is from 1 to 80.
Defaults	None	
Command Modes	Global configuration (config)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
Usage Guidelines	The port profile name must be unique for each port profile.	
Examples	<p>This example shows how to create a port profile called AccessProf:</p> <pre>vsm# configure vsm(config)# port-profile AccessProf vsm(config-port-prof)#</pre> <p>This example shows how to remove the port profile called AccessProf:</p> <pre>vsm# configure vsm(config)# no port-profile AccessProf vsm(config)#</pre>	
Related Commands	Command	Description
	show port-profile	Displays information about the port profiles.

Send document comments to vsg-docfeedback@cisco.com.

push

To push the current mode onto stack or to save it, use the **push** command.

push *file-name*

Syntax Description	<i>file-name</i>	Name of the file.
--------------------	------------------	-------------------

Command Default	None
-----------------	------

Command Modes	EXEC
---------------	------

SupportedUserRoles	network-admin
--------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples	This example shows how to push file1 onto the stack: vsm# push file1
----------	--

Related Commands	Command	Description
	pop	Pops the current mode off the stack.

Send document comments to vsg-docfeedback@cisco.com.

registration-ip

To set the service registry IP address, use the **registration-ip** command. To discard the service registry IP address, use the **no** form of this command.

registration-ip *ip-address*

no registration-ip *ip-address*

Syntax Description	<i>ip-address</i>	Service registry IP address. The format is A.B.C.D.
--------------------	-------------------	---

Command Default	None
-----------------	------

Command Modes	Cisco VNMC policy agent configuration mode (config-vnm-policy-agent)
---------------	--

SupportedUserRoles	network-admin
--------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples This example shows how to set the service registry IP address:

```
vsm# configure
vsm(config)# vnm-policy-agent
vsm(config-vnm-policy-agent)# registration-ip 209.165.200.233
vsm(config-vnm-policy-agent)#
```

Related Commands	Command	Description
	vnm-policy-agent	Enters the Cisco VNMC policy agent configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

shared-secret

To set the shared secret password for communication between the Cisco Virtual Security Gateway (VSG), the Virtual Supervisor Module (VSM), and the Cisco Virtual Network Management Center (VNMC), use the **shared-secret** command. To discard the shared secret password, use the **no** form of this command.

shared-secret *shared-secret-password*

no shared-secret *shared-secret-password*

Syntax Description	<i>shared-secret-password</i> Shared secret password. The range of valid values is from 1 to 64. You must use at least one uppercase character.				
Command Default	None				
Command Modes	Cisco VNMC policy agent configuration mode (config-vnm-policy-agent)				
Supported User Roles	network-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.0(4)SV1(1)	This command was introduced.
Release	Modification				
4.0(4)SV1(1)	This command was introduced.				
Examples	<p>This example shows how to set the shared secret password:</p> <pre>vsm# configure vsm(config)# vnm-policy-agent vsm(config-vnm-policy-agent)# shared-secret Password123 vsm(config-vnm-policy-agent)#</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>vnm-policy-agent</td> <td>Enters VNM policy agent configuration mode.</td> </tr> </tbody> </table>	Command	Description	vnm-policy-agent	Enters VNM policy agent configuration mode.
Command	Description				
vnm-policy-agent	Enters VNM policy agent configuration mode.

show running-config

To display the running configuration, use the **show running-config** command.

```
show running-config [aaa | aclmgr | all | am | arp | cdp | diff | exclude | expand-port-profile |
icmpv6 | igmp | interface | ip | ipqos | ipv6 | l3vm | license | monitor | ntp | port-profile |
port-security | radius | rpm | security | snmp | vdc-all | vlan | vshd]
```

Syntax	Description
aaa	(Optional) Displays the Authentication, Authorization and Accounting (AAA) configuration.
aclmgr	(Optional) Displays the running configuration for Access Control List (ACL) manager.
all	(Optional) Displays the current operating configurations.
am	(Optional) Displays Application Management (AM) information.
arp	(Optional) Displays Address Resolution Protocol (ARP) information.
cdp	(Optional) Displays the Cisco Discovery Protocol (CDP) configuration.
diff	(Optional) Displays the difference between the running and startup configurations.
exclude	(Optional) Excludes the running configuration of specified features.
expand-port-profile	(Optional) Displays port profile information.
icmpv6	(Optional) Displays Internet Control Message Protocol (ICMPv6) information.
igmp	(Optional) Displays Internet Group Management Protocol (IGMP) information.
interface	(Optional) Displays interface configurations.
ip	(Optional) Displays Internet Protocol (IP) information.
ipqos	(Optional) Displays the running configuration for the IP Quality of Service (QoS) manager.
ipv6	(Optional) Displays IPv6 information.
l3vm	(Optional) Displays Layer 3 Virtual Machine (L3VM) information.
license	(Optional) Displays the licensing configuration.
monitor	(Optional) Displays Ethernet Switched Port Analyzer (SPAN) session information.
ntp	(Optional) Displays Network Time Protocol (NTP) information.
port-profile	(Optional) Displays port-profile configurations.
port-security	(Optional) Displays port-security configurations.
radius	(Optional) Displays the Remote Authentication Dial In User Service (RADIUS) configuration.
rpm	(Optional) Displays RPM information.
security	(Optional) Displays the security configurations.
snmp	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
vdc-all	(Optional) Displays all Virtual Device Context (VDC) configurations.

Send document comments to vsg-docfeedback@cisco.com.

vlan	(Optional) Displays virtual large area network (VLAN) information.
vshd	(Optional) Displays the running configuration for virtual shared hardware device (VSHD).

Command Default None

Related Commands

Command	Description
show aaa	Displays AAA information.

Send document comments to vsg-docfeedback@cisco.com.

show vnm-pa status

To display the installation status of a policy agent, use the **show vnm-pa status** command.

```
show vnm-pa status
```

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vnm-pa status** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the installation status of the policy agent:

```
vsm# configure
vsm(config)# show vnm-pa status
VNM Policy-Agent status is - Installed Successfully. Version 1.0(0.512)-vsm
vsm(config)#
```

Related Commands	Command	Description
	vnm-policy-agent	Enters the Cisco VNMC policy agent configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

show vsn brief

To display a brief amount of information about the Cisco Virtual Security Gateway (VSG), use the **show vsn brief** command.

show vsn brief

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.1(2)SV1(5.1)	The output of the show vsn brief was changed to show the information about the Cisco VSG sin L2 and L3 mode.
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsn brief** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display brief information about the Cisco VSGs:

```
vsm# show vsn brief
```

```

VLAN      IP-ADDR      MAC-ADDR      FAIL-MODE  STATE  MODULE
501       10.1.1.44    00:50:56:8f:5a:85  Close     Up     9
-         10.1.1.40    -              Close     Up     11,12
vsm#
```

In this example, VSG 10.1.1.44 is in L2 mode and VSG 10.1.1.40 is in L3 mode.

Related Commands

Command	Description
show vsn port vethernet	Displays information about the Cisco VSG.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

show vsn connection

To display Cisco VSG connections, use the **show vsn connection** command.

```
show vsn connection [vlan vlan-num | ip ip-addr | module module-num]
```

Syntax Description		
vlan	(Optional) Displays vlan keyword.	
<i>vlan-num</i>	Specifies the VLAN number for the VSG service vlan.	
ip	(Optional) Displays connections to a specific IP address.	
<i>ip-addr</i>	Specifies the IP keyword.	
module	(Optional) Displays module keyword.	
<i>module-num</i>	Specifies the module number to see all the VSN connections on the module.	

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2.1SV1(5.1)	The output of the show vsn connection command was modified to show that the VLAN column is now referred as V(X)LAN. In V(X)LAN column the VLAN is represented with prefix "v-" and V(X)LAN is shown without any prefix.
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsn connection** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display Cisco VSG connections:

```
vsm# show vsn connection
```

Legend:

```

Send document comments to vsg-docfeedback@cisco.com.

show vsn port vethernet

To display information about virtual Ethernet (vEth) ports, use the **show vsn port vethernet** command.

show vsn port vethernet *port-number*

Syntax Description	<i>port-number</i>	Port number. The range is from 1 to 1048575.
Command Default	None	
Command Modes	EXEC	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines

You can use the following operators with the **show vsn port vethernet** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples

This example shows how to display information about vEth port 2:

```
vsm# show vsn port vethernet 2

Veth           : Veth2

Related Commands

Command	Description
<code>show vsn port vethernet</code>	Displays information about the Cisco VSG.

Send document comments to vsg-docfeedback@cisco.com.

state (port profile)

To enable the operational state of a port profile, use the **state** command. To disable the operational state of a port profile, use the **no** form of the command.

state enabled

no state enabled

Syntax	Description
enabled	Enables or disables the port profile.

Defaults
Disabled

Command Modes
Port profile configuration (config-port-prof)

Supported User Roles
network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples This example shows how to enable the operational state of a port profile:

```
vsm# configure
vsm(config)# port-profile testprofile
vsm(config-port-prof)# state enabled
vsm(config-port-prof)#
```

Related Commands	Command	Description
	show port-profile	Displays port profile information.

Send document comments to vsg-docfeedback@cisco.com.

switchport mode

To set the port mode of an interface, use the **switchport mode** command. To remove the port mode configuration, use the **no** form of this command.

```
switchport mode { access | private-vlan { host | promiscuous } | trunk }
```

```
no switchport mode { access | private-vlan { host | promiscuous } | trunk }
```

Syntax Description

access	Sets the port mode access.
private-vlan	Sets the port mode to private VLAN.
host	Sets the port mode private VLAN to host.
promiscuous	Sets the port mode private VLAN to promiscuous.
trunk	Sets the port mode to trunk.

Defaults

Switchport mode is not set.

Command Modes

Interface configuration (config-if)
Port profile configuration (config-port-prof)

Supported User Roles

network-admin

Command History

Release	Modification
4.0(4)SV1(1)	This command was introduced.

Examples

This example shows how to set the port mode of an interface:

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# switchport mode private-vlan host
vsm(config-if)#
```

This example shows how to remove the mode configuration:

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# no switchport mode private-vlan host
vsm(config-if)#
```

Related Commands

Command	Description
show interface	Displays interface information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

switchport access vlan

To set the access mode of an interface, use the **switchport access vlan** command. To remove the access mode configuration, use the **no** form of this command.

switchport access vlan *vlan-id*

no switchport access vlan *vlan-id*

Syntax Description	<i>vlan-id</i>	VLAN identification number. The range of values is from 1 to 3967.
--------------------	----------------	--

Defaults	Access mode is not set.
----------	-------------------------

Command Modes	Interface configuration (config-if) Port profile configuration (config-port-prof)
---------------	--

SupportedUserRoles	network-admin
--------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Examples This example shows how to set the access mode of an interface:

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# switchport access vlan 100
vsm(config-if)#
```

This example shows how to remove the access mode configuration:

```
vsm# configure
vsm(config)# interface vethernet 1
vsm(config-if)# no switchport access vlan
vsm(config-if)#
```

Related Commands	Command	Description
	show interface	Displays interface information.

Send document comments to vsg-docfeedback@cisco.com.

tcp state-checks

To configure the switch to perform TCP state checks, use the **tcp state-checks** command. To disable TCP state checks, use the **no** form of this command.

tcp state-checks

no tcp state-checks

Syntax Description This command has no arguments or keywords.

Defaults TCP state checks are enabled.

Command Modes Global configuration (config)

SupportedUserRoles network-admin
system-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines Because TCP state checks in vPath are enabled by default, use the **no** form of the **tcp state-checks** command to disable the state checks.

Examples This example shows how to enter the TCP state checks submode:

```
vsm# config
vsm(config)# tcp state-checks
vsm(config-vsn) #
```

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

vlan

To create a VLAN and enter the VLAN configuration mode, use the **vlan** command. To remove a VLAN, use the **no** form of this command.

```
vlan {id | dot1Q tag native}
```

```
no vlan {id | dot1Q tag native}
```

Syntax Description	<i>id</i>	VLAN identification number. The range is from 1 to 4094.
	dot1Q tag native	Specifies an IEEE 802.1Q virtual LAN.
Defaults	VLAN 1	
Command Modes	Global configuration (config)	
Supported User Roles	network-admin	
Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
Usage Guidelines	Specify a VLAN range by using a dash. For example, 1-9 or 20-30.	
Examples	<p>This example shows how to create a VLAN and enter the VLAN configuration mode:</p> <pre>vsm# configure vsm (config)# vlan 100 vsm (config-vlan)#</pre> <p>This example shows how to remove a VLAN:</p> <pre>switch# configure switch(config)# no vlan 100 switch(config)#</pre>	
Related Commands	Command	Description
	show vlan	Displays the VTP VLAN status.

Send document comments to vsg-docfeedback@cisco.com.

vmware port-group

To create a VMware port group, use the **vmware port-group** command. To remove the VMware port group, use the **no** form of this command.

vmware port-group *name*

no vmware port-group *name*

Syntax Description	<i>name</i>	Name of the VMware port group.
Defaults	None	
Command Modes	Port profile configuration (config-port-prof)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
Usage Guidelines	To create the VMware port group, you must be in port profile configuration mode.	
Examples	<p>This example shows how to create a VMware port group:</p> <pre>vsm# configure vsm(config)# port-profile testprofile vsm(config-port-prof)# vmware port-group testgroup vsm(config-port-prof)#</pre> <p>The following example shows how to remove the VMware port group:</p> <pre>vsm# configure vsm(config)# port-profile testprofile vsm(config-port-prof)# no vmware port-group testgoup vsm(config-port-prof)#</pre>	
Related Commands	Command	Description
	show port-profile name	Displays configuration information about a particular port profile.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

vn-service ip-address

To assign a data IP address, a VLAN number, and a profile to a Cisco VSG L2 mode, use the **vn-service ip-address** command. To disable the data IP address, use the **no** form of the command.

```
vn-service ip-address ip-address vlan vlan-number [fail {close | open} | security-profile
profile-name]
```

```
no vn-service ip-address ip-address vlan vlan-number [fail {close | open} | security-profile
profile-name]
```

To assign a data IP address and a profile to a Cisco VSG L3 mode, use the **vn-service ip-address** command. To disable the data IP address, use the **no** form of the command.

```
vn-service ip-address ip-address l3-mode [fail {close | open} | security-profile profile-name]
```

```
no vn-service ip-address ip-address l3-mode [fail {close | open} | security-profile profile-name]
```

Syntax Description		
<i>ip-address</i>		IP address. The format is A.B.C.D.
vlan <i>vlan-number</i>		Specifies the service VLAN number. The range of values is from 1 to 3967 and 4048 to 4093.
fail		(Optional) Sets states to be in either fail close or fail open.
close		Drops packets if the Cisco VSG is down.
open		Passes packets through if the Cisco VSG is down.
security-profile <i>profile-name</i>		(Optional) Specifies the security profile name.
l3-mode		Specifies that the Cisco VSG is in L3 mode.

Command Default Fail close

Command Modes Port profile configuration (config-port-prof)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)SV1(5.1)	This command was changed to include the command syntax and description for the L3 mode.
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines Use the **vn-service ip-address** command to configure the IP address, VLAN, and security profile for the Cisco VSG, and optionally to allow for a fail-safe configuration.

Send document comments to vsg-docfeedback@cisco.com.

The fail mode specifies what the behavior is when the Virtual Ethernet Module (VEM) does not have connectivity to the Cisco VSG. The default fail mode is **close**, which means that the packets are dropped. The **open** fail mode means that packets are passed.

The security profile name must match one of the security profiles created on the Cisco VSG.

The IP address must match the data interface IP address on the Cisco VSG.

Examples

This example shows how to assign the IP address and VLAN number and how to specify that packets are to be passed when the Cisco VSG fails:

```
vsm# configure
Enter configuration commands, one per line. End with CNTL/Z.
vsm(config)# port-profile pp1
vsm(config-port-prof)# vn-service ip-address 209.165.200.236 vlan 2 fail open
vsm(config-port-prof)#
```

Related Commands

Command	Description
show	Displays virtual service domain information.
virtual-service-domain	

Send document comments to vsg-docfeedback@cisco.com.

vnm-policy-agent

To enter Cisco Virtual Network Management Center (VNMC) policy agent mode, use the **vnm-policy-agent** command.

vnm-policy-agent

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines Use the Cisco VNMC policy agent configuration mode to configure policy agents.

Examples This example shows how enter policy agent mode:

```
vsm# configure
vsm(config)# vnm-policy-agent
vsm(config-vnm-policy-agent)#
```

Related Commands	Command	Description
	configure	Enters global configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

vsn type vsg global

To enter the tcp state-checks configuration submode, use the **vsn type vsg global** command.

```
vsn type vsg global
```

Syntax Description This command has no arguments or keywords.

Defaults TCP state checks are enabled.

Command Modes Global configuration (config)

SupportedUserRoles network-admin
system-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines Because TCP state checks in vPath are enabled by default, use the **no** form of the **tcp state-checks** command to disable the state checks.

Examples This example shows how to enter the VSN configuration submode:

```
vsm# config
vsm(config)# vsn type vsg global
vsm(config-vsn)#
```

Related Commands	Command	Description
	tcp state-checks	Enables TCP state checks in the vPath.

Send document comments to vsg-docfeedback@cisco.com.

CHAPTER **2**

Cisco Virtual Security Gateway Commands

This chapter provides information about Cisco Virtual Security Gateway (VSG) commands.

Send document comments to vsg-docfeedback@cisco.com.

action

To specify the actions to be executed when traffic characteristics match with an associated rule, use the **action** command. To remove the binding of the action with the given rule, use the **no** version of this command.

```
action { drop | permit | log | inspection protocol-type }
```

Syntax Description		
drop		Drops the incoming packets.
permit		Permits the incoming packets.
log		Logs the policy evaluation event.
inspection		Specifies the protocol be inspected.
<i>protocol-type</i>		Specific protocol type to be inspected. FTP, RSH, and TFTP are supported.

Command Default	
	None

Command Modes	
	Policy configuration (config-policy)

Supported User Roles	
	network-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines	
	Use the action command to specify the actions to be executed when traffic characteristics match with the associated rule. The command can be entered multiple times until the upper bound limit is reached.

Examples	
	This example shows how to specify that the policy is to drop packets.

```
vsm(config-policy)# action drop
```

Related Commands	Command	Description
	rule	Enters the rule configuration submode.

Send document comments to vsg-docfeedback@cisco.com.

attach

To access a module or the console of a module, use the **attach** command.

```
attach { console module module-number | module module-number }
```

Syntax Description	console module	Specifies the console.
	<i>module-number</i>	Module number. The range is from 1 to 66.
	module	Specifies a module.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	<p>This example shows how to attach to a module:</p> <pre>VSG# attach module 1 Attaching to module 1 ... To exit type 'exit', to abort type '\$.' Cisco Nexus Operating System (NX-OS) Software TAC support: http://www.cisco.com/tac Copyright (c) 2002-2010, Cisco Systems, Inc. All rights reserved. ----------	---

Related Commands	Command	Description
	show terminal	Displays information about the terminal.

Send document comments to vsg-docfeedback@cisco.com.

attribute

To specify the particular attribute characteristics of a policy that is to be tested, use the **attribute** command.

attribute *attr-seq-num attr-name value attr-value*

Syntax Description		
	<i>attr-seq-num</i>	Attribute input sequence number.
	<i>attr-name</i>	Name of a VM or network attribute (for example, src.vm.name).
	value	Designates the use of the following attribute value.
	<i>attr-value</i>	Value of a VM or network attribute (for example, engg).

Command Default None

Command Modes Test policy-engine (test-policy-engine)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Examples This example shows how to specify an attribute for a policy.

```
vsg(test-policy-engine)# attribute 1 src.vm.name value engg
vsg(test-policy-engine)# attribute 2 src.net.ip-address value 10.10.10.1
vsg(test-policy-engine)# exit
```

Result: DROP, Policy: p1, Rule: r1

Related Commands	Command	Description
	test policy-engine	Enters the test policy-engine submode.
	simulate-pe-req policy	

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

banner motd

To configure a message of the day (MOTD) banner, use the **banner motd** command.

banner motd [*delimiting-character message delimiting-character*]

no banner motd [*delimiting-character message delimiting-character*]

Syntax Description

<i>delimiting-character</i>	(Optional) Character used to signal the beginning and end of the message text. For example, in the following message, the delimiting character is #: #Testing the MOTD#
<i>message</i>	(Optional) Banner message. Up to 40 lines with a maximum of 80 characters in each line.

Defaults

“User Access Verification” is the default message of the day.

Command Modes

Global configuration (config)

SupportedUserRoles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines

The MOTD banner is displayed on the terminal before the login prompt whenever you log in.

The message is restricted to 40 lines and 80 characters per line.

To create a multiple-line MOTD banner, press Enter before typing the delimiting character to start a new line. You can enter up to 40 lines of text.

Follow these guidelines when choosing your delimiting character:

- Do not use the *delimiting-character* in the *message* string.
- Do not use " and % as delimiter.

Examples

This example shows how to configure and then display a banner message with the text, “Testing the MOTD:”

```
vsg# configure
vsg(config)# banner motd #Testing the MOTD#
vsg(config)# show banner motd
Testing the MOTD
```

Send document comments to vsg-docfeedback@cisco.com.

This example shows how to configure and then display a multiple-line MOTD banner:

```
vsg(config)# banner motd #Welcome to authorized users.
> Unauthorized access prohibited.#
vsg(config)# show banner motd
Welcome to authorized users.
Unauthorized access prohibited.
```

This example shows how to revert to the default MOTD banner:

```
vsg# configure
vsg(config)# no banner motd
vsg(config)# show banner motd
User Access Verification
```

Related Commands

Command	Description
show banner motd	Displays the MOTD banner.

Send document comments to vsg-docfeedback@cisco.com.

boot

To configure boot images, use the **boot** command. To revert to default settings, use the **no** form of this command.

```
boot {asm-sfn | auto-copy | kickstart bootflash | ssi | system bootflash}
```

```
no boot {asm-sfn | auto-copy | kickstart bootflash | ssi | system bootflash}
```

Syntax Description	asm-sfn	Specifies a boot variable.
	auto-copy	Enables or disables automatic copying of boot images to the standby Cisco VSG.
	kickstart bootflash	Specifies the boot variable URI for the kickstart image.
	ssi	Specifies a boot variable.
	system bootflash	Specifies the boot variable URI for the system image.

Defaults None

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to configure a boot variable:

```
vsg# configure
vsg(config)# boot asm-sfn bootflash module 6
```

Related Commands	Command	Description
	show boot	Displays the current boot variables.

Send document comments to vsg-docfeedback@cisco.com.

cd

To change to a different directory, use the **cd** command.

```
cd {bootflash: | volatile:}
```

Syntax Description

bootflash:	Specifies the bootflash directory.
volatile:	Specifies the volatile directory.

Defaults

bootflash:

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines

Use the **pwd** command to verify the name of the directory you are currently working in.

Examples

This example shows how to change to the volatile directory:

```
vsg# cd volatile
vsg#
```

Related Commands

Command	Description
pwd	Displays the name of the directory you are currently working in.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

cdp

To configure the Cisco Discovery Protocol (CDP), use the **cdp** command. To remove the CDP configuration, use the **no** form of this command.

```
cdp {advertise {v1 | v2} | enable | format device-id | holdtime seconds | timer seconds}
```

```
no cdp {advertise | enable | format device-id | holdtime seconds | timer seconds}
```

Syntax Description		
advertise		Specifies the CDP version to advertise.
v1		CDP Version 1.
v2		CDP Version 2.
enable		Enables CDP globally on all interfaces and port channels.
format device-id		Specifies the device ID format for CDP.
holdtime seconds		Sets the maximum amount of time that CDP holds onto neighbor information before discarding it. The range is from 10 to 255.
timer seconds		Sets the refresh time for CDP to send advertisements to neighbors. The range is from 5 to 254.

Defaults	
	None

Command Modes	
	Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to set CDP Version 1 as the version to advertise: <pre>vsg(config)# cdp advertise v1</pre>
	This example shows how to remove CDP Version 1 as the version to advertise: <pre>vsg(config)# no cdp advertise v1</pre>

Related Commands	Command	Description
	show cdp global	Displays the CDP configuration.

Send document comments to vsg-docfeedback@cisco.com.

clear accounting

To clear the accounting log, use the **clear accounting** command.

clear accounting log

Syntax Description	log	Clears the accounting log.
--------------------	-----	----------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear the accounting log: <pre>vsg# clear accounting log</pre>
----------	---

Related Commands	Command	Description
	show accounting log	Displays the accounting log.

Send document comments to vsg-docfeedback@cisco.com.

clear ac-driver

To clear Application Container (AC) driver statistics, use the **clear ac-driver** command.

clear ac-driver statistics

Syntax Description	statistics	Clears AC driver statistics.
Defaults	None	
Command Modes	EXEC Global configuration (config)	
Supported User Roles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to clear AC driver statistics: vsg# clear ac-driver statistics	
Related Commands	Command	Description
	show ac-driver statistics	Displays AC driver statistics.

Send document comments to vsg-docfeedback@cisco.com.

clear bootvar

To clear the boot variables log, use the **clear bootvar** command.

clear bootvar log

Syntax Description	log	Clears the boot variables log.
--------------------	-----	--------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear the boot variables log: <pre>vsg# clear bootvar log</pre>
----------	--

Related Commands	Command	Description
	show bootvar log	Displays the accounting log.

Send document comments to vsg-docfeedback@cisco.com.

clear cdp

To clear Cisco Discovery Protocol (CDP) information, use the **clear cdp** command.

```
clear cdp {counters [interface {ethernet slot-number / port-number [. subinterface-number]}]} |
mgmt 0} | table [interface {ethernet slot-number / port-number [. subinterface-number]}]}
```

Syntax Description

counters	Clears the CDP counters.
interface	(Optional) Clears interfaces.
ethernet	Clears Ethernet interfaces.
<i>slot</i>	Slot. The range is from 1 to 66.
<i>port-number</i>	Port number. The range is from 1 to 128.
<i>. sub-interface</i>	(Optional) Subinterface number. The range of values is from 1 to 4094.
mgmt 0	Clears the management 0 interface.
table	Clears the CDP statistics table.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear CDP counters on all interfaces:

```
vsg# clear cdp counters
```

Related Commands

Command	Description
show cdp all	Displays all interfaces that are CDP enabled.
show cdp entry	Displays CDP information.

Send document comments to vsg-docfeedback@cisco.com.

clear cli

To clear command line interface (CLI) command history, use the **clear cli** command.

clear cli history

Syntax Description	history	Clears the CLI command history.
--------------------	---------	---------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear the CLI command history: <pre>vsg# clear cli history</pre>
----------	---

Related Commands	Command	Description
	show cli history	Displays the CLI command history.

Send document comments to vsg-docfeedback@cisco.com.

clear cores

To clear the core files, use the **clear cores** command.

```
clear cores [archive file file-name]
```

Syntax Description	archive file	(Optional) Clears the archived core files.
	<i>file-name</i>	Core filename.
Defaults	None	
Command Modes	EXEC	
	Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to clear all core files: vsg# clear cores	
Related Commands	Command	Description
	show cores	Displays the core filename.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear counters

To clear interface loopback counters, use the **clear counters** command.

```
clear counters [interface {all | data | ethernet slot / port [.{sub-interface}]} | loopback
virtual-interface-number | mgmt 0 | port-channel port-channel-number]
```

Syntax Description		
interface	(Optional) Interface counters.	
all	Clears all interface counters.	
ethernet	Clears Ethernet interface counters.	
<i>slot</i>	Slot. The range is from 1 to 66.	
<i>port</i>	Port. The range is from 1 to 128.	
<i>sub-interface</i>	(Optional) Subinterface number. The range of values is from 1 to 4094.	
loopback	Clears loopback interface counters.	
<i>virtual-interface-number</i>	Virtual interface number. The range is from 0 to 1023.	
mgmt 0	Clears the management interface.	
port-channel	Clears port-channel interfaces.	
<i>port-channel-number</i>	Port channel number. The range is from 1 to 4096.	

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear a counter on a specific Ethernet interface:

```
vsg# clear counters ethernet 2/1
```

Related Commands	Command	Description
	show interface counters	Displays the interface status, which includes the counters.

Send document comments to vsg-docfeedback@cisco.com.

clear debug-logfile

To clear the contents of the debug log, use the **clear debug-logfile** command.

clear debug-logfile *log-name*

Syntax Description	<i>log-name</i>	Name of the debug log.
Defaults	None	
Command Modes	EXEC Global configuration (config)	
Supported User Roles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to clear the debug log: vsg# clear debug-logfile syslog_debug	
Related Commands	Command	Description
	show debug logfile	Displays the contents of the debug logfile.

Send document comments to vsg-docfeedback@cisco.com.

clear frame

To clear Layer 2 traffic statistics, use the **clear frame** command.

clear frame statistics

Syntax Description	statistics	Clears Layer 2 traffic statistics.
--------------------	------------	------------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear the Layer 2 traffic statistics: <pre>vsg# clear frame statistics</pre>
----------	---

Related Commands	Command	Description
	show vlan	Displays VLAN information.

Send document comments to vsg-docfeedback@cisco.com.

clear fs-daemon

To clear the file sharing (FS) daemon log, use the **clear fs-daemon** command.

clear fs-daemon log

Syntax Description	log	Clears the FS daemon log.	
Defaults	None		
Command Modes	EXEC Global configuration (config)		
SupportedUserRoles	network-admin network-operator		
Command History	Release	Modification	
	4.2(1)VSG1(1)	This command was introduced.	
Examples	This example shows how to clear the FS daemon log: vsg# clear fs-daemon log		
Related Commands	Command	Description	
	show logging	Displays the logging configuration and the contents of the log file.	

Send document comments to vsg-docfeedback@cisco.com.

clear inspect

To clear the File Transfer Protocol (FTP) inspection statistics, use the **clear inspect** command.

```
clear inspect ftp statistics [svs-domain-id domain-id module module-number]
```

Syntax Description		
	ftp statistics	Clears FTP statistics.
	svs-domain-id	(Optional) Clears FTP statistics in the SVS domain.
	<i>domain-id</i>	SVS domain ID.
	module	(Optional) Clears FTP statistics on a specific module.
	<i>module-number</i>	Module number.

Defaults	
	None

Command Modes	
	EXEC
	Global configuration (config)

SupportedUserRoles	
	network-admin
	network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear the FTP inspection statistics:

```
vsg# clear inspect ftp statistics svs-domain-id 2 module 63
```

Related Commands	Command	Description
	show vsg	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

clear install

To clear the installation log, use the **clear install** command.

```
clear install { all failed-standby | failure-reason | status }
```

Syntax Description		
	all failed-standby	Clears all the installation logs.
	failure-reason	Clears the installation failure reason log.
	status	Clear the installation status log.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear all the installation logs: vsg# clear install all failed-standby

Related Commands	Command	Description
	show install all status	Displays the status of the current or last installation.

Send document comments to vsg-docfeedback@cisco.com.

clear ip adjacency statistics

To clear IP address adjacency statistics, use the **clear ip adjacency statistics** command.

clear ip adjacency statistics

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear IP adjacency statistics:

```
vsg# clear ip adjacency statistics
```

Related Commands	Command	Description
	show ipv6 adjacency	Displays IP information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ip arp

To clear specific Address Resolution Protocol (ARP) IP address statistics, use the **clear ip arp** command.

```
clear ip arp ip-address [vrf {vrf-name | all | default | management}]
```

Syntax Description		
<i>ip-address</i>		IP address. The format is A.B.C.D.
vrf		Clears all Virtual Routing and Forwarding (VRF) ARP IP address statistics.
<i>vrf-name</i>		VRF name. The range is from 1 to 32.
all		Clears all ARP IP address statistics.
default		Clears default VRF ARP IP address statistics.
management		Clears management VRF ARP IP address statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear a specific ARP IP address in EXEC mode:

```
vsg# clear ip arp 209.165.200.229
```

This example shows how to clear a specific ARP IP address in configuration mode:

```
vsg# configure
vsg#(config) clear ip arp 209.165.200.229
```

Related Commands	Command	Description
	show ip arp	Displays IP ARP information.

Send document comments to vsg-docfeedback@cisco.com.

clear ip arp data

To clear Address Resolution Protocol (ARP) IP address statistics on the data 0 interface, use the **clear ip arp data** command.

```
clear ip arp data 0 [vrf {vrf-name | all | default | management}]
```

Syntax Description		
0		Clears data 0 interface ARP IP address statistics.
vrf		(Optional) Clears Virtual Routing and Forwarding (VRF) ARP IP address statistics.
<i>vrf-name</i>		VRF name. The range is from 1 to 32.
all		Clears all ARP IP address statistics.
default		Clears default ARP IP address statistics.
management		Clears management interface ARP IP address statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all ARP IP address statistics on data 0 interface:

```
vsg# clear ip arp data 0 all
```

Related Commands	Command	Description
	show ip arp	Displays IP ARP information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ip arp ethernet

To clear Address Resolution Protocol (ARP) IP address statistics on Ethernet interfaces, use the **clear ip arp ethernet** command.

```
clear ip arp ethernet slot-number / port-number [. | vrf vrf-name]
```

Syntax Description		
	<i>slot-number</i>	Slot number.
	<i>port-number</i>	Port number.
	vrf	(Optional) Clears VRF ARP IP address statistics.
	<i>vrf-name</i>	VRF name. The range is from 1 to 32.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

Supported User Roles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear ARP IP address statistics on an Ethernet interface: <pre>vsg# clear ip arp ethernet 1 / 1</pre>

Related Commands	Command	Description
	show ip arp	Displays IP ARP information.

Send document comments to vsg-docfeedback@cisco.com.

clear ip arp loopback

To clear Address Resolution Protocol (ARP) IP address statistics on loopbacks, use the **clear ip arp loopback** command.

```
clear ip arp loopback loopback-number [vrf vrf-name]
```

Syntax Description		
	<i>loopback-number</i>	Loopback number.
	vrf	(Optional) Clears VRF ARP IP address statistics.
	<i>vrf-name</i>	VRF name. The range is from 1 to 32.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

Supported User Roles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear ARP IP address statistics on a loopback: <pre>vsg# clear ip arp loopback 10</pre>

Related Commands	Command	Description
	show ip arp	Displays ARP IP address information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ip arp mgmt

To clear Address Resolution Protocol (ARP) IP address statistics on the management interface, use the `clear ip arp mgmt` command.

```
clear ip arp mgmt 0 [vrf {vrf-name} | all | default | management]}
```

Syntax Description	0	Clears management 0 interface ARP IP address statistics.
	vrf	(Optional) Clears Virtual Routing and Forwarding (VRF) ARP IP address statistics.
	<i>vrf-name</i>	VRF name. The range is from 1 to 32.
	all	Clears all ARP IP address statistics.
	default	Clears default ARP IP address statistics.
	management	Clears management interface ARP IP address statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear ARP IP address statistics on the management interface:

```
vsg# clear ip arp mgmt all
```

Related Commands	Command	Description
	<code>show ip arp</code>	Displays IP ARP information.

■ clear ip arp port-channel

Send document comments to vsg-docfeedback@cisco.com.

clear ip arp port-channel

To clear Address Resolution Protocol (ARP) IP address statistics on port channels, use the **clear ip arp port-channel** command.

```
clear ip arp port-channel port-channel-number [. sub-interface | vrf vrf-name]
```

Syntax Description		
<i>port-channel-number</i>		Port channel number.
<i>sub-interface</i>		(Optional) Subinterface number.
vrf		(Optional) Clears Virtual Routing and Forwarding (VRF) ARP IP address statistics.
<i>vrf-name</i>		VRF name. The range is from 1 to 32.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear ARP IP address statistics on a port channel:

```
vsg# clear ip arp port-channel 2
```

Related Commands	Command	Description
	show port-channel	Displays port-channel information.

Send document comments to vsg-docfeedback@cisco.com.

clear ip arp statistics

To clear Address Resolution Protocol (ARP) IP address statistics, use the **clear ip arp statistics** command.

```
clear ip arp statistics {data 0 | ethernet | loopback | mgmt | port-channel | vrf}
```

Syntax Description		
	data 0	Clears the data 0 interface.
	ethernet	Clears the Ethernet interface.
	loopback	Clears the loopback interface.
	mgmt	Clears the management interface.
	port-channel	Clears the port channel interface.
	vrf	Clears the Virtual Routing and Forwarding (VRF) interface.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear ARP IP address statistics on data 0:
vsg# **clear ip arp statistics data 0**

Related Commands	Command	Description
	show ip	Displays IP information.

Send document comments to vsg-docfeedback@cisco.com.

clear ip arp vrf

To clear Address Resolution Protocol (ARP) Virtual Routing and Forwarding (VRF) IP address statistics, use the **clear ip arp vrf** command.

```
clear ip arp vrf {vrf-name | all | default | management}
```

Syntax Description		
	<i>vrf-name</i>	VRF name. The range is from 1 to 32.
	all	Clears all ARP IP address statistics.
	default	Clears default ARP IP address statistics.
	management	Clears management interface ARP IP address statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear IP ARP VRF IP address statistics:
vsg# **clear ip arp vrf vrf1**

Related Commands	Command	Description
	show vrf	Displays VRF information.

Send document comments to vsg-docfeedback@cisco.com.

clear ip igmp event-history

To clear Internet Group Management Protocol (IGMP) IP address event history entries, use the **clear ip igmp event-history** command.

```
clear ip igmp event-history {cli | debugs | events | ha | igmp-internal | mtrace | policy | vrf}
```

Syntax Description	cli	Clears the command line interface (CLI) IGMP IP address event history entries.
	debugs	Clears debug IGMP IP address event history entries.
	events	Clears events IGMP IP address event history entries.
	ha	Clears high-availability (HA) IGMP IP address event history entries.
	igmp-internal	Clears internal IGMP IP address event history entries.
	mtrace	Clears Mtrace IGMP IP address event history entries.
	policy	Clears policy IGMP IP address event history entries.
	vrf	Clears virtual routing and forwarding (VRF) IGMP IP address event history entries.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear HA IGMP IP address event history entries:

```
vsg# clear ip igmp event-history ha
```

Related Commands	Command	Description
	show ip igmp	Displays the IGMP status and the IGMP configuration.

Send document comments to vsg-docfeedback@cisco.com.

clear ip igmp snooping

To clear Internet Group Management Protocol (IGMP) IP address snooping entries, use the **clear ip igmp snooping** command.

```
clear ip igmp snooping { event-history [VPC | igmp-snoop-internal | mfdm | mfdm-sum | vlan | vlan-events] | explicit-tracking vlan vlan-id | statistics vlan [vlan-id | all] }
```

Syntax Description		
event-history		Clears event history IGMP IP address snooping entries.
VPC		(Optional) Clears virtual port channel (vPC) IGMP IP address snooping entries.
igmp-snoop-internal		(Optional) Clears internal IGMP IP address snooping entries.
mfdm		(Optional) Clears MFDM IGMP IP address snooping entries.
mfdm-sum		(Optional) Clears MFDM-sum IGMP IP address snooping entries.
vlan		(Optional) Clears VLAN IGMP IP address snooping entries.
vlan-events		(Optional) Clears VLAN event IGMP IP address snooping entries.
explicit-tracking		Clears explicit tracking IGMP IP address snooping entries.
statistics vlan		Clears VLAN statistical IGMP IP address snooping entries.
<i>vlan-id</i>		(Optional) VLAN identification number. The range is from 1 to 3967 or 4048 to 4093.
all		(Optional) Clears all IGMP IP address snooping entries.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all IGMP IP address snooping entries:

```
vsg# clear ip igmp snooping all
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
show ip igmp	Displays IGMP status and configuration.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ip interface

To clear IP address statistics on interfaces, use the **clear ip interface** command.

```
clear ip interface statistics [data 0 | ethernet slot-number / port-number [. sub-interface-number]
| loopback loopback-number | mgmt | port-channel port-channel-number
[. sub-interface-number]]
```

Syntax Description

statistics	Clears IP address statistics on interfaces.
data 0	(Optional) Clears IP address statistics on the data 0 interface.
ethernet	(Optional) Clears IP address statistics on Ethernet interfaces.
<i>slot-number</i>	Slot number. The range is from 1 to 66.
<i>port-number</i>	Port number. The range is from 1 to 128.
<i>subinterface-number</i>	Subinterface number. The range is 1 to 4094.
loopback	(Optional) Clears IP address statistics on the loopback interface.
<i>loopback-number</i>	Loopback number. The range is from 0 to 123.
mgmt 0	(Optional) Clears IP address statistics on the management 0 interface.
port-channel	(Optional) Clears IP address statistics on the port-channel interface.
<i>port-channel-number</i>	Port-channel number. The range is from 1 to 4096.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear IP address statistics on an Ethernet interface:

```
vsg# clear ip interface statistics ethernet 1 / 2
```

Related Commands

Command	Description
show ip interface	Displays IP interface information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ip route

To clear IP routing information, use the **clear ip route** command.

```
clear ip route {* | A.B.C.D [A.B.C.D {data 0 | ethernet slot / port | loopback loopback-number |
port-channel portchannel-number}] | A.B.C.D/LEN [A.B.C.D {data 0 | ethernet slot / port |
loopback loopback-number | port-channel portchannel-number}] | vrf {vrf-name | default |
management 0}}
```

Syntax Description		
*		Clears all IP routing information.
A.B.C.D		Clears IP routing information at a specific IP address.
data 0		Clears IP routing information on the management 0 interface.
ethernet slot / port		Clears IP routing information on a specific Ethernet interface.
loopback		Clears IP routing information on the loopback interface.
loopback-number		Loopback number. The range is from 0 to 1023.
port-channel		Clears IP routing information on the port channel.
portchannel-number		Port-channel number. The range is from 1 to 4096.
A.B.C.D/LEN		Clears IP routing information at a specific IP address.
vrf		Clears IP routing information for a VRF.
vrf-name		Virtual forwarding and routing (VRF) name. The range is from 1 to 32.
default		Clears default IP routing information.
management 0		Clears IP routing information on the management 0 interface.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all IP routing information:
vsg# **clear ip route ***

■ clear ip route

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	show routing	Displays routes.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ip traffic

To clear global IP statistics, use the **clear ip traffic** command.

```
clear ip traffic [vrf {vrf-name | default | management}]
```

Syntax Description		
vrf		Clears Virtual Routing and Forwarding (VRF) global IP address statistics.
<i>vrf-name</i>		VRF name. The range is from 1 to 32.
default		Clears default global IP address statistics.
management		Clears management global IP address statistics.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

Supported User Roles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear global IP statistics: <pre>vsg# clear ip traffic</pre>

Related Commands	Command	Description
	show ip traffic	Displays IP traffic information.

■ `clear ipv6 adjacency statistics`

Send document comments to vsg-docfeedback@cisco.com.

clear ipv6 adjacency statistics

To clear IPv6 address adjacency statistics, use the `clear ipv6 adjacency statistics` command.

`clear ipv6 adjacency statistics`

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear IPv6 address adjacency statistics:

```
vsg# clear ipv6 adjacency statistics
```

Related Commands	Command	Description
	<code>show ipv6 adjacency</code>	Displays IPv6 statistics.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ipv6 icmp interface statistics

To clear Internet Control Management Protocol (ICMP) IPv6 interface statistics, use the **clear ipv6 icmp interface statistics** command.

```
clear ipv6 icmp interface statistics [data 0 | ethernet slot-number / port-number
[. sub-interface-number] | loopback virtual-interface-number | port-channel
port-channel-number [. sub-interface-number] ]
```

Syntax Description		
data 0	(Optional)	Clears the data 0 interface.
ethernet	(Optional)	Clears the Ethernet interface.
<i>slot-number</i>		Ethernet slot number. The range is from 1 to 66.
<i>/</i>		Slot number port number separator.
<i>port-number</i>		Ethernet port number. The range is from 1 to 128.
<i>.</i>		Port number subinterface number separator.
<i>sub-interface-number</i>	(Optional)	Subinterface number. The range is from 1 to 4094.
loopback	(Optional)	Clears the loopback interface.
<i>virtual-interface-number</i>		Virtual interface number. The range is from 0 to 1023.
port-channel	(Optional)	Clears the port-channel interface.
<i>port-channel-number</i>		Port-channel number. The range is from 1 to 4096.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear ICMP IPv6 Ethernet interface statistics:

```
vsg# clear ipv6 icmp interface statistics ethernet 1 / 2 . 3
```

Related Commands	Command	Description
	show ipv6 icmp	Displays ICMPv6 information.

■ `clear ipv6 icmp mld groups`

Send document comments to vsg-docfeedback@cisco.com.

clear ipv6 icmp mld groups

To clear Internet Control Message Protocol (ICMP) Multicast Listener Discovery (MLD) group IPv6 statistics, use the **clear ipv6 icmp mld groups** command.

```
clear ipv6 icmp mld groups { * [vrf {vrf-name | all | default | management}] | A:B::C:D |
A:B::C:D/LEN }
```

Syntax Description		
*		Clears all routes.
vrf		(Optional) Clears ICMP MLD virtual routing and forwarding (VRF) IPv6 routes.
vrf-name		VRF name. The range is from 1 to 32.
all		Clears all routing information.
default		Clears default routing information.
management		Clears management routing information.
A:B::C:D		Clears a specific IPv6 address.
A:B::C:D/LEN		Clears a specific IPv6 address.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all ICMP MLD group IPv6 statistics:

```
vsg# clear ipv6 icmp mld groups *
```

Related Commands	Command	Description
	show ipv6 icmp	Displays ICMPv6 information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear ipv6 icmp mld route

To clear Internet Control Message Protocol (ICMP) Multitask Listener Discovery (MLD) routes, use the `clear ipv6 icmp mld route` command.

```
clear ipv6 icmp mld route { * [vrf {vrf-name | all | default | management}] | A:B::C:D |
A:B::C:D/LEN }
```

Syntax Description		
*		Clears all routes.
vrf		(Optional) Clears ICMP MLD virtual routing and forwarding (VRF) IPv6 routes.
vrf-name		VRF name. The range is from 1 to 32.
all		Clears all routing information.
default		Clears default routing information.
management		Clears management routing information.
A:B::C:D		Clears a specific ICMP MLD IPv6 route.
A:B::C:D/LEN		Clears a specific ICMP MLD IPv6 route.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all IPv6 ICMP MLD routes:

```
vsg# clear ipv6 icmp mld route *
```

Related Commands	Command	Description
	show ipv6 icmp	Displays ICMPv6 information.

Send document comments to vsg-docfeedback@cisco.com.

clear ipv6 nd interface statistics

To clear Neighbor Discovery (ND) IPv6 interface statistics, use the **clear ipv6 nd interface statistics** command.

```
clear ipv6 nd interface statistics [data 0 | ethernet slot-number / port-number
[. sub-interface-number] | loopback virtual-interface-number | port-channel
port-channel-number [. sub-interface-number] ]
```

Syntax Description		
data 0	(Optional) Clears the data 0 interface.	
ethernet	(Optional) Clears the Ethernet interface.	
<i>slot-number</i>	Ethernet slot number. The range is from 1 to 66.	
/	Slot number port number separator.	
<i>port-number</i>	Ethernet port number. The range is from 1 to 128.	
.	Port number subinterface number separator.	
<i>sub-interface-number</i>	(Optional) Subinterface number. The range is from 1 to 4094.	
loopback	(Optional) Clears the loopback interface.	
<i>virtual-interface-number</i>	Virtual interface number. The range is from 0 to 1023.	
port-channel	(Optional) Clears the port-channel interface.	
<i>port-channel-number</i>	Port-channel number. The range is from 1 to 4096.	

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear IPv6 ND interface statistics:

```
vsg# clear ipv6 nd interface statistics ethernet 2 / 3 . 4
```

Related Commands	Command	Description
	show ipv6 nd	Displays Neighbor Discovery interface statistics.

Send document comments to vsg-docfeedback@cisco.com.

clear line

To end a session on a specified Virtual Teletype (VTY), use the **clear line** command.

clear line *vtj-name*

Syntax Description	<i>vtj-name</i> VTY name. The range is from 1 to 64.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to end a session on a specified VTY: <pre>vsg# clear line VTY100</pre>
-----------------	--

Related Commands	Command	Description
	show users	Displays active user sessions.

Send document comments to vsg-docfeedback@cisco.com.

clear logging

To clear logfile messages and logging sessions, use the **clear logging** command.

```
clear logging {logfile | session}
```

Syntax Description		
	logfile	Clears log file messages.
	session	Clears logging sessions.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear messages from the logging file: <pre>vsg# clear logging logfile</pre>

Related Commands	Command	Description
	show logging logfile	Displays the contents of the log file.

Send document comments to vsg-docfeedback@cisco.com.

clear ntp

To clear the Network Time Protocol (NTP) sessions and statistics, use the **clear ntp** command.

```
clear ntp {session | statistics {all-peers | io | local | memory}}
```

Syntax Description		
	session	Clears NTP sessions.
	statistics	Clears NTP statistics.
	all-peers	Clears all statistics.
	io	Clears IO statistics.
	local	Clears local statistics.
	memory	Clears memory statistics.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear all NTP statistics: <pre>vsg# clear ntp statistics all-peers</pre>

Related Commands	Command	Description
	show ntp peers	Displays information about NTP peers.

Send document comments to vsg-docfeedback@cisco.com.

clear nvram

To clear the nonvolatile RAM (NVRAM), use the **clear nvram** command.

clear nvram

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear the NVRAM:

```
vsg# clear nvram
```

Related Commands	Command	Description
	show system resources	Displays system resources.

Send document comments to vsg-docfeedback@cisco.com.

clear pktmgr client

To clear packet manager client counters, use the **clear pktmgr client** command.

```
clear pktmgr client [client-counter-uuid]
```

Syntax Description	<i>client-counter-uuid</i> (Optional) Client counter user identification. The range is from 0 to 4294967295.				
Defaults	None				
Command Modes	EXEC Global configuration (config)				
Supported User Roles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to clear a packet manager client counter:</p> <pre>vsg# clear pktmgr client 100</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>clear routing</td> <td>Clears routing information.</td> </tr> </tbody> </table>	Command	Description	clear routing	Clears routing information.
Command	Description				
clear routing	Clears routing information.				

Send document comments to vsg-docfeedback@cisco.com.

clear pktmgr interface

To clear packet manager interface information, use the **clear pktmgr interface** command.

```
clear pktmgr interface [data 0 | ethernet slot-number / port-number [. sub-interface-number] |
loopback virtual-interface-number | mgmt 0 | port-channel [. sub-interface-number]]
```

Syntax Description

data 0	(Optional) Clears the data 0 interface.
ethernet	(Optional) Clears the Ethernet interface.
<i>slot-number</i>	Ethernet slot number. The range is from 1 to 66.
<i>/</i>	Slot-number port-number separator.
<i>port-number</i>	Ethernet port number. The range is from 1 to 128.
<i>.</i>	Port-number subinterface number separator.
<i>sub-interface-number</i>	Subinterface number. The range is from 1 to 4094.
loopback	(Optional) Clears the loopback interface.
<i>virtual-interface-number</i>	Virtual interface number. The range is from 0 to 1023.
port-channel	(Optional) Clears the port-channel interface.
<i>port-channel-number</i>	Port-channel number. The range is from 1 to 4096.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear packet manager interface information:

```
vsg# clear pktmgr interface ethernet 10 / 11 . 12
```

Related Commands

Command	Description
clear pktmgr client	Clears the packet manager client.

Send document comments to vsg-docfeedback@cisco.com.

clear policy-engine

To clear policy engine statistics, use the **clear policy-engine** command.

```
clear policy-engine {policy-name stats | stats}
```

Syntax Description	<i>policy-name</i>	Policy engine name.
	stats	Clears policy engine statistics.
Defaults	None	
Command Modes	EXEC	
	Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to clear policy engine statistics: vsg# clear policy-engine stats	
Related Commands	Command	Description
	show policy-engine	Displays the policy engine.

Send document comments to vsg-docfeedback@cisco.com.

clear processes

To clear process logs, use the **clear processes** command.

```
clear processes {log {all | archive [archive-name] | pid pid-number} | vdc vdc-name {all | pid
pid-number}}
```

Syntax Description

log	Clears process logs.
all	Clears all process logs.
archive	Clears archived process logs.
<i>archive-name</i>	(Optional) Archive name.
pid	Clears the process log for a specific process.
<i>pid-number</i>	PID number.
vdc	Clears process logs for a specific Cisco VSG.
<i>vdc-name</i>	VDC name.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear all process logs:

```
vsg# clear processes log all
```

Related Commands

Command	Description
show processes	Displays all processes.

Send document comments to vsg-docfeedback@cisco.com.

clear rmon

To clear Remote Monitoring (RMON) logs, use the **clear rmon** command.

```
clear rmon {alarms | all-alarms | events | hcalarms}
```

Syntax Description	alarms	Clears RMON alarms.
	all-alarms	Clears all RMON alarms.
	events	Clears RMON events.
	hcalarms	Clears HC RMON alarms.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear RMON alarms:
vsg# **clear rmon alarms**

Related Commands	Command	Description
	show rmon	Displays RMON information.

Send document comments to vsg-docfeedback@cisco.com.

clear role

To clear role session information, use the **clear role** command.

clear role session

Syntax Description	session	Clears the role session information.
--------------------	---------	--------------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear role session information: <pre>vsg# clear role session</pre>
----------	---

Related Commands	Command	Description
	show role	Displays role information.

Send document comments to vsg-docfeedback@cisco.com.

clear routing *

To clear all routes, use the **clear routing *** command.

clear routing *

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all routes:

```
vsg# clear routing *
Clearing ALL routes
vsg#
```

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing A.B.C.D

To clear specific routes, use the **clear routing A.B.C.D** command.

```
clear routing ip-address [ip-address {data 0 | ethernet slot-number / port-number
[sub-interface-number]} | loopback virtual-interface-number | port-channel
port-channel-number}]
```

Syntax Description		
<i>ip-address</i>		IP address. The format is A.B.C.D.
data 0		(Optional) Clears routing on the data 0 interface.
ethernet		(Optional) Clears routing on Ethernet interfaces.
<i>slot-number</i>		Slot number. The range is from 1 to 66.
/		Slot and port number separator.
<i>port-number</i>		Port number. The range is from 1 to 128.
.		Subinterface separator.
<i>subinterface-number</i>		(Optional) Subinterface number. The range is from 1 to 4094.
loopback		(Optional) Clears routing on the loopback interface.
<i>virtual-interface-number</i>		Loopback number. The range is from 0 to 123.
port-channel		(Optional) Clears routing on the port-channel interface.
<i>port-channel-number</i>		Port-channel number. The range is from 1 to 4096.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear routes on the data 0 interface:
vsg# **clear routing 209.165.200.228 data 0**

Related Commands	Command	Description
	show routing	Displays the IP route table.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear routing A.B.C.D/LEN

To clear specific routes, use the **clear routing A.B.C.D** command.

```
clear routing ip-address [ip-address {data 0 | ethernet slot-number / port-number
[. {sub-interface-number}] | loopback virtual-interface-number | port-channel
port-channel-number}]
```

Syntax	Description
<i>ip-address</i>	IP address. The format is A.B.C.D.
data 0	(Optional) Clears routing on the data 0 interface.
ethernet	(Optional) Clears routing on Ethernet interfaces.
<i>slot-number</i>	Slot number. The range is from 1 to 66.
<i>/</i>	Slot and port number separator.
<i>port-number</i>	Port number. The range is from 1 to 128.
.	Subinterface separator.
<i>subinterface-number</i>	(Optional) Subinterface number. The range is from 1 to 4094.
loopback	(Optional) Clears routing on the loopback interface.
<i>virtual-interface-number</i>	Loopback number. The range is from 0 to 123.
port-channel	(Optional) Clears routing on the port-channel interface.
<i>port-channel-number</i>	Port-channel number. The range is from 1 to 4096.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear routes on the data 0 interface:
vsg# **clear routing 209.165.200.228 data 0**

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing event-history

To clear routing event histories, use the **clear routing event-history** command.

```
clear routing event-history {add-route | cli | delete-route | errors | general | loop-detection |
                             modify-route | notifications | recursive-next-hop | summary | udfm | udfm-summary }
```

Syntax	Description
add-route	Clears the added routes event history.
cli	Clears the command line interface (CLI) routing event history.
delete-route	Clears the deleted routes event history.
errors	Clears the error routes event history.
general	Clears the general routes event history.
loop-detection	Clears the loop-detection routes event history.
modify-route	Clears the modified routes event history.
notifications	Clears the notification routes event history.
recursive-next-hop	Clears the recursive-next-hop routing event history.
summary	Clears the summary routing event history.
udfm	Clears the UDFM routing event history.
udfm-summary	Clears the UDFM summary routing event history.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear the loop-detection routes event history:

```
vsg# clear routing event-history loop-detection
```

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing ip *

To clear all IP routes, use the **clear routing ip *** command.

```
clear routing ip *
```

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear all IP routes: <pre>vsg# clear routing ip *</pre>
-----------------	--

Related Commands	Command	Description
	show routing	Displays the IP route table.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear routing ip A.B.C.D

To clear IP routing statistics, use the **clear routing ip** command.

```
clear routing ip ip-address [data 0 | ethernet slot-number / port-number [. sub-interface-number]
| loopback virtual-interface-number | mgmt 0 | port-channel [. sub-interface-number]]
```

Syntax Description

data 0	Clears the data 0 interface.
ethernet	Clears the Ethernet interface.
<i>slot-number</i>	Ethernet slot number. The range is from 1 to 66.
<i>/</i>	Slot number port number separator.
<i>port-number</i>	Ethernet port number. The range is from 1 to 128.
<i>.</i>	Port number subinterface number separator.
<i>sub-interface-number</i>	Subinterface number. The range is from 1 to 4094.
loopback	Clears the loopback interface.
<i>virtual-interface-number</i>	Virtual interface number. The range is from 0 to 1023.
port-channel	Clears the port channel interface.
<i>port-channel-number</i>	Port Channel number. The range is from 1 to 4096.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear IP routes on slot 2, port 3:

```
vsg# clear routing ip ethernet 2 / 3
```

Related Commands

Command	Description
show routing	Displays the IP route table.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear routing ip A.B.C.D/LEN

To clear routing, use the **clear routing ip A.B.C.D/LEN** command.

```
clear routing ip ip-address [ip-address {data 0 | ethernet slot-number / port-number
[. {sub-interface-number}] | loopback virtual-interface-number | port-channel
port-channel-number}]
```

Syntax	Description
data 0	Clears the data 0 interface.
ethernet	Clears the Ethernet interface.
<i>slot-number</i>	Ethernet slot number. The range is from 1 to 66.
<i>/</i>	Slot number port number separator.
<i>port-number</i>	Ethernet port number. The range is from 1 to 128.
<i>.</i>	Port number subinterface number separator.
<i>sub-interface-number</i>	Subinterface number. The range is from 1 to 4094.
loopback	Clears the loopback interface.
<i>virtual-interface-number</i>	Virtual interface number. The range is from 0 to 1023.
port-channel	Clears the port-channel interface.
<i>port-channel-number</i>	Port-channel number. The range is from 1 to 4096.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear IP routes:
vsg# **clear routing ip 209.165.200.228**

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing ip event-history

To clear routing event histories, use the **clear routing ip event-history** command.

```
clear routing ip event-history {add-route | cli | delete-route | errors | general | loop-detection |
                               modify-route | notifications | recursive-next-hop | summary | udfm | udfm-summary }
```

Syntax Description		
add-route		Clears the added routes event history.
cli		Clears the command line interface (CLI) routing event history.
delete-route		Clears the deleted routes event history.
errors		Clears the error routes event history.
general		Clears the general routes event history.
loop-detection		Clears the loop-detection routes event history.
modify-route		Clears the modified routes event history.
notifications		Clears the notification routes event history.
recursive-next-hop		Clears the recursive-next-hop routing event history.
summary		Clears the summary routing event history.
udfm		Clears the UDFM routing event history.
udfm-summary		Clears the UDFM summary routing event history.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear the notifications routes event history:
vsg# **clear routing ip event-history notifications**

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing ip unicast

To clear unicast routing entries, use the **clear routing ip unicast** command.

```
clear routing ip unicast { * | A.B.C.D | A.B.C.D/LEN | event-history }
```

Syntax Description		
	*	Clears all IP unicast routes.
	A.B.C.D	Clears a specific IP unicast route.
	A.B.C.D/LEN	Clears a specific IP unicast route.
	event-history	Clears the IP unicast event history.

Defaults	
	None

Command Modes	
	EXEC
	Global configuration (config)

SupportedUserRoles	
	network-admin
	network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear all IP unicast routes:
	<pre>vsg# clear routing ip unicast *</pre>

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing ipv4

To clear IPv4 route entries, use the **clear routing ipv4** command.

```
clear routing ipv4 { * | A.B.C.D | A.B.C.D/LEN | event-history | unicast }
```

Syntax Description		
*		Clears all IPv4 routes.
A.B.C.D		Clears a specific IPv4 route.
A.B.C.D/LEN		Clears a specific IPv4 route.
event-history		Clears the IPv4 routing event history.
unicast		Clears IPv4 unicast routes.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear all IPv4 routes: vsg# clear routing ipv4 *
----------	--

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing ipv6

To clear IPv6 route entries, use the **clear routing ipv6** command.

```
clear routing ipv6 { * | A:B::C:D | A:B::C:D/LEN | event-history | unicast }
```

Syntax Description		
*		Clears all IPv6 routes.
A:B::C:D		Clears a specific IPv6 route.
A:B::C:D/LEN		Clears a specific IPv6 route.
event-history		Clears the IPv6 routing event history.
unicast		Clears IPv6 unicast routes.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to clear all IPv6 routes: vsg# clear routing ipv6 *

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf

To clear virtual routing and forwarding (VRF) routes, use the **clear routing vrf** command.

clear routing vrf *vrf-name*

Syntax Description	<i>vrf-name</i>	VRF name. The range is from 1 to 32.
---------------------------	-----------------	--------------------------------------

Defaults	None	
-----------------	------	--

Command Modes	EXEC Global configuration (config)	
----------------------	---------------------------------------	--

SupportedUserRoles	network-admin network-operator	
---------------------------	-----------------------------------	--

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear VRF routes: <pre>vsg# clear routing vrf vrfTest</pre>	
-----------------	--	--

Related Commands	Command	Description
	show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf default

To clear virtual routing and forwarding (VRF) routes, use the **clear routing vrf default** command.

```
clear routing vrf default { * | A.B.C.D | A.B.C.D/LEN | ip | ipv4 | ipv6 | unicast }
```

Syntax Description

*	Clears all VRF routes.
A.B.C.D	Clears a specific VRF route.
A.B.C.D/LEN	Clears a specific VRF route.
ip	Clears IP VRF routes.
ipv4	Clears IPv4 VRF routes.
ipv6	Clears IPv6 VRF routes.
unicast	Clears unicast VRF routes.

Defaults

None

Command Modes

EXEC
Global configuration (config)

SupportedUserRoles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear VRF routes:

```
vsg# clear routing vrf default *
```

Related Commands

Command	Description
show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf management *

To clear all virtual routing and forwarding (VRF) management routes, use the **clear routing vrf management *** command.

clear routing vrf management *

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear all VRF management routes:

```
vsg# clear routing vrf management *
```

Related Commands	Command	Description
	show routing	Displays the IP route table.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

clear routing vrf management

To clear specific virtual routing and forwarding (VRF) management routes, use the **clear routing vrf management** command.

```
clear routing vrf management ethernet-address [ethernet-address {data 0 | ethernet slot-number /
port-number [. sub-interface] | loopback loopback-number | port-channel port-number [.
sub-interface]}]
```

Syntax Description

<i>ethernet-address</i>	Ethernet address.
data 0	Clears VRF management routes.
ethernet	Clears VRF management routes on Ethernet ports.
<i>slot-number</i>	Ethernet port slot number.
/	Slot and port separator.
<i>port-number</i>	Ethernet port number.
. <i>sub-interface</i>	(Optional) Ethernet subinterface.
loopback	Clears VRF management routes on a loopback.
<i>loopback-number</i>	Loopback number.
port-channel	Clears VRF management routes on a port channel.
<i>port-number</i>	Port-channel number.
unicast	Clears unicast IP routes.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear a specific set of Ethernet routes:

```
vsg# clear routing vrf management 209.165.200.226 209.165.200.236 ethernet 2 / 4
```

■ clear routing vrf management

Related Commands

Command	Description
show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf management

To clear specific virtual routing and forwarding (VRF) management routes, use the **clear routing vrf management** command.

```
clear routing vrf management ethernet-address [ethernet-address {data 0 | ethernet slot-number / port-number [. sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface]}]
```

Syntax Description

<i>ethernet-address</i>	Ethernet address.
data 0	Clears VRF management routes.
ethernet	Clears VRF management routes on Ethernet ports.
<i>slot-number</i>	Ethernet port slot number.
<i>port-number</i>	Ethernet port number.
. <i>sub-interface</i>	Ethernet subinterface.
loopback	Clears VRF management routes on a loopback.
<i>loopback-number</i>	Loopback number.
port-channel	Clears VRF management routes on a port channel.
<i>port-number</i>	Port-channel number.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to clear a specific set of Ethernet routes:

```
vsg# clear routing vrf management 209.165.200.226 209.165.200.236 ethernet 2 / 4
```

Related Commands

Command	Description
show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf management ip

To clear virtual routing and forwarding (VRF) IP management routes, use the **clear routing vrf management ip** command.

```
clear routing vrf management ip { * | A.B.C.D [A.B.C.D { data 0 | ethernet slot-number / port-number [. sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface]} | A.B.C.D/LEN [A.B.C.D { data 0 | ethernet slot-number / port-number [. sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface]} | unicast [A.B.C.D { data 0 | ethernet slot-number / port-number [. sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface]}]}
```

Syntax	Description
*	Clears all IP routes.
A.B.C.D	(Optional) Clears a specific VRF management IP route.
data 0	Clears VRF management IP routes.
ethernet	Clears VRF management IP routes on Ethernet ports.
<i>slot-number</i>	Ethernet port slot number.
/	Slot number and port number separator.
<i>port-number</i>	Ethernet port number.
.	Subinterface separator.
<i>sub-interface</i>	(Optional) Ethernet subinterface.
loopback	Clears VRF management IP routes on a loopback.
<i>loopback-number</i>	Loopback number.
port-channel	Clears VRF management IP routes on a port channel.
<i>port-number</i>	Port-channel number.
unicast	Clears unicast IP routes.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to clear all IP unicast routes:

```
vsg# clear routing vrf management ip unicast *
```

Related Commands

Command	Description
<code>show routing</code>	Displays the IP route table.

clear routing vrf management ipv4

To clear IPv4 virtual routing and forwarding (VRF) management routes, use the **clear routing vrf management ipv4** command.

```
clear routing vrf management ipv4 { * | A.B.C.D [A.B.C.D { data 0 | ethernet slot-number /
port-number [. sub-interface] | loopback loopback-number | port-channel port-number [.
sub-interface]} | A.B.C.D/LEN [A.B.C.D { data 0 | ethernet slot-number / port-number [.
sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface]} |
unicast [A.B.C.D { data 0 | ethernet slot-number / port-number [. sub-interface] | loopback
loopback-number | port-channel port-number [. sub-interface]}]}
```

Syntax	Description
*	Clears all IPv4 routes.
A.B.C.D	Clears a specific VRF management IPv4 route.
data 0	Clears VRF management IPv4 routes.
ethernet	Clears VRF management IPv4 routes on Ethernet ports.
<i>slot-number</i>	Ethernet port slot number.
<i>/</i>	Slot number and port number separator.
<i>port-number</i>	Ethernet port number.
<i>.</i>	Subinterface separator.
<i>sub-interface</i>	Ethernet subinterface.
loopback	Clears VRF management IPv4 routes on a loopback.
<i>loopback-number</i>	Loopback number.
port-channel	Clears VRF management IPv4 routes on a port channel.
<i>port-number</i>	Port-channel number.
unicast	Clears unicast IP routes.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to clear an IPv4 VRF management route:

```
vsg# clear routing vrf management ipv4 209:165::200:229
```

Related Commands

Command	Description
<code>show routing</code>	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf management ipv6

To clear IPv6 virtual routing and forwarding (VRF) management routes, use the **clear routing vrf management ipv6** command.

```
clear routing vrf management ipv6 { * | A.B.C.D [A.B.C.D { data 0 | ethernet slot-number /
port-number [. sub-interface] | loopback loopback-number | port-channel port-number [.
sub-interface]} | A.B.C.D/LEN [A.B.C.D { data 0 | ethernet slot-number / port-number [.
sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface]} |
unicast [A.B.C.D { data 0 | ethernet slot-number / port-number [. sub-interface] | loopback
loopback-number | port-channel port-number [. sub-interface]}]}
```

Syntax Description		
*		Clears all IPv6 routes.
A.B.C.D		Clears a specific IPv6 route.
data 0		Clears VRF management IPv6 routes.
ethernet		Clears VRF management IPv6 routes on Ethernet ports.
slot-number		Ethernet port slot number.
/		Slot number and port number separator.
port-number		Ethernet port number.
.		Subinterface separator.
sub-interface		Ethernet subinterface.
loopback		Clears VRF management IPv6 routes on a loopback.
loopback-number		Loopback number.
port-channel		Clears VRF management IPv6 routes on a port channel.
port-number		Port-channel number.
unicast		Clears unicast IP routes.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to clear an IPv6 VRF management route:

```
vsg# clear routing vrf management ipv6 209:165::200:225
```

Related Commands

Command	Description
show routing	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear routing vrf management unicast

To clear unicast virtual routing and forwarding (VRF) management routes, use the **clear routing vrf management unicast** command.

```
clear routing vrf management unicast {* | A.B.C.D [A.B.C.D {data 0 | ethernet slot-number /
port-number [. sub-interface] | loopback loopback-number | port-channel port-number [.
sub-interface}} | A.B.C.D/LEN [A.B.C.D {data 0 | ethernet slot-number / port-number [.
sub-interface] | loopback loopback-number | port-channel port-number [. sub-interface}}}}
```

Syntax Description

*	Clears all unicast routes.
A.B.C.D	Clears a specific VRF management unicast route.
data 0	Clears VRF management unicast routes.
ethernet	Clears VRF management unicast routes on Ethernet ports.
<i>slot-number</i>	Ethernet port slot number.
<i>/</i>	Slot number and port number separator.
<i>port-number</i>	Ethernet port number.
<i>.</i>	Subinterface separator.
<i>sub-interface</i>	Ethernet subinterface.
loopback	Clears VRF management unicast routes on a loopback.
<i>loopback-number</i>	Loopback number.
port-channel	Clears VRF management unicast routes on a port channel.
<i>port-number</i>	Port-channel number.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to clear a specific unicast route:

```
vsg# clear routing vrf management unicast 209.165.200.225
```

Related Commands

Command	Description
<code>show routing</code>	Displays the IP route table.

Send document comments to vsg-docfeedback@cisco.com.

clear scheduler

To clear the scheduler log, use the **clear scheduler** command.

clear scheduler logfile

Syntax Description	logfile	Clears the scheduler log.
--------------------	---------	---------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear the scheduler log file: <pre>vsg# clear scheduler logfile</pre>
----------	--

Related Commands	Command	Description
	show scheduler logfile	Displays the scheduler log file.

Send document comments to vsg-docfeedback@cisco.com.

clear screen

To clear the screen, use the **clear screen** command.

```
clear screen
```

Syntax Description This command has no key words or arguments.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear the screen:

```
vsg# clear screen
```

Related Commands	Command	Description
	show terminal	Displays terminal configuration parameters.

Send document comments to vsg-docfeedback@cisco.com.

clear service-path

To clear service path information, use the **clear service-path** command.

```
clear service-path {connection | statistics [svs-domain-id id module module-number]}
```

Syntax Description		
connection		Clears all the connection entries in the flow table.
statistics		Clears service path statistics.
svs-domain-id	(Optional)	Clears the SVS domain identification number.
<i>id</i>		DVS domain identification number.
module	(Optional)	Clears module information.
<i>module-number</i>		Module number.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear service path statistics:
vsg# **clear service-path statistics**

Related Commands	Command	Description
	show service-path statistics	Displays service path statistics.

Send document comments to vsg-docfeedback@cisco.com.

clear snmp

To clear Simple Network Management Protocol (SNMP) information, use the **clear snmp** command.

```
clear snmp {counters | hostconfig}
```

Syntax Description	counters	Clears the SNMP counters.
	hostconfig	Clears the SNMP host list.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear SNMP counters:
vsg# **clear snmp counters**

Related Commands	Command	Description
	show snmp community	Displays SNMP community strings.

Send document comments to vsg-docfeedback@cisco.com.

clear sockets

To clear socket statistics, use the **clear sockets** command.

```
clear sockets {all | raw | raw6 | tcp | tcp6 | udp | udp6}
```

Syntax Description	all	Clears all socket statistics.
	raw	Clears RAW v4 statistics.
	raw6	Clears RAW v6 statistics.
	tcp	Clears TCP v4 statistics.
	tcp6	Clears TCP v6 statistics.
	udp	Clears UDP v4 statistics.
	udp6	Clears UDP v6 statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear socket statistics:

```
vsg# clear sockets all
```

Related Commands	Command	Description
	show sockets statistics	Displays TCP socket statistics.

Send document comments to vsg-docfeedback@cisco.com.

clear ssh

To clear the Secure Shell (SSH) host session, use the **clear ssh** command.

clear ssh hosts

Syntax Description	hosts	Clears the SSH host session.
--------------------	-------	------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear all SSH host sessions: vsg# clear ssh hosts
----------	---

Related Commands	Command	Description
	show ssh	Displays SSH information.

■ clear system internal ac application

Send document comments to vsg-docfeedback@cisco.com.

clear system internal ac application

To clear application containers, use the **clear system internal ac application** command.

clear system internal ac application *application-name* **instance** *instance-number* [**fe** *fe-name*]

Syntax Description	
<i>application-name</i>	Application container name.
instance	Clears the application container instance.
<i>instance-number</i>	Application container instance number.
fe	(Optional) Clears the functional element.
<i>fe-name</i>	Functional element name.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear an application container:
vsg# **clear system internal ac application core instance 1**

Related Commands	Command	Description
	show system internal ac application	Displays application container information.

Send document comments to vsg-docfeedback@cisco.com.

clear system internal ac ipc-stats

To clear application container Instructions per Cycle (IPC) statistics, use the **clear system internal ac ipc-stats** command.

```
clear system internal ac ipc-stats fe {attribute-manager | inspection-ftp | inspection-rsh |
inspection-tftp | service-path }
```

Syntax Description	fe	Clears the functional element.
	attribute-manager	Clears the attribute manager FE.
	inspection-ftp	Clears the inspection FTP FE.
	inspection-rsh	Clears the inspection RSH FE.
	inspection-tftp	Clears the inspection TFTP FE.
	service-path	Clears the service path FE.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear application container IPC statistics:

```
vsg# clear system internal ac ipc-stats
vsg#
```

Related Commands	Command	Description
	show system internal ac application	Displays application container information.

Send document comments to vsg-docfeedback@cisco.com.

clear user

To clear a user session, use the **clear user** command.

```
clear user user-id
```

Syntax Description	<i>user-id</i>	User identification number.
---------------------------	----------------	-----------------------------

Defaults	None	
-----------------	------	--

Command Modes	EXEC Global configuration (config)	
----------------------	---------------------------------------	--

SupportedUserRoles	network-admin network-operator	
---------------------------	-----------------------------------	--

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to clear a user session: vsg# clear user user1	
-----------------	---	--

Related Commands	Command	Description
	show users	Displays user session information.

Send document comments to vsg-docfeedback@cisco.com.

cli

To define a command line interface (CLI) variable for a terminal session, use the **cli** command. To remove the CLI variable, use the **no** form of this command.

cli var name *variable-name variable-text*

cli no var name *variable-name*

Syntax Description		
	<i>variable-name</i>	Variable name. The name is alphanumeric, case sensitive, and has a maximum of 31 characters.
	<i>variable-text</i>	Variable text. The text is alphanumeric, can contain spaces, and has a maximum of 200 characters.

Defaults None

Command Modes EXEC

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can reference a CLI variable using the following syntax:

`$(variable-name)`

Instances where you can use variables are as follows:

- Command scripts
- Filenames

You cannot reference a variable in the definition of another variable.

You can use the predefined variable, `TIMESTAMP`, to insert the time of day. You cannot change or remove the `TIMESTAMP` CLI variable.

You must remove a CLI variable before you can change its definition.

Examples This example shows how to define a CLI variable:

```
vsg# cli var name testinterface interface 2/3
vsg#
```

Send document comments to vsg-docfeedback@cisco.com.

This example shows how to reference the `TIMESTAMP` variable:

```
vsg# copy running-config > bootflash:run-config-$(TIMESTAMP).cnfg
vsg#
```

This example shows how to remove a CLI variable:

```
vsg# cli no var name testinterface interface 2/3
vsg#
```

Related Commands

Command	Description
<code>show cli variables</code>	Displays the CLI variables.

Send document comments to vsg-docfeedback@cisco.com.

clock set

To manually set the clock, use the **clock set** command.

clock set *time day month year*

Syntax Description		
<i>time</i>		Time of the day. The format is <i>HH:MM:SS</i> .
<i>day</i>		Day of the month. The range is from 1 to 31.
<i>month</i>		Month of the year. The values are January, February, March, April, May, June, July, August, September, October, November, and December .
<i>year</i>		Year. The range is from 2000 to 2030.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
	Use the clock set command when you cannot synchronize your device with an outside clock source, such as a Network Time Protocol (NTP) server.

Examples	
	This example shows how to manually set the clock: vsg# clock set 9:00:00 29 January 2011 vsg#

Related Commands	Command	Description
	show clock	Displays the clock time.

Send document comments to vsg-docfeedback@cisco.com.

condition

To specify a condition statement used in a rule or zone, use the **condition** command. To remove the condition statement for a rule or zone, use the **no** form of this command

```
condition attribute-name {eq | neq | gt | lt | prefix | contains | in-range | member-of | not-in-range
| not-member-of} attribute-value1 [attribute-value2]
```

Syntax Description		
<i>attribute-name</i>		Name of the attribute for the rule object.
eq		Equal to a number or exactly matched with a string.
neq		Not equal to a number or not exactly matched with a string.
gt		Greater than.
lt		Less than.
prefix		Specifies a prefix of a string or an IP address.
contains		Contains a substring.
in-range		A range of two integers, dates, times, or IP addresses.
member-of		A member of an object-group.
not-in-range		Negation of the in-range operator.
not-member-of		Negation of the member.
<i>attribute-value1</i>		Value of an attribute (for example, 10.10.10.1) or name of an object-group (for example, "ipaddr-group").
<i>attribute-value2</i>		(Optional) Value of an attribute or the netmask of a network address.

Command Default None

Command Modes Policy configuration (config-policy)
Zone configuration (config-zone)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines Use the **condition** command to specify a condition statement that is used in a rule. Each condition statement supports one of the virtual machine (VM), zone, network, or environment attributes. When multiple condition statements are used in a rule, all conditions are considered to be AND'd during a policy evaluation.

The following operators must have at least two attribute values:

Send document comments to vsg-docfeedback@cisco.com.

- **prefix**—When applied against an IP address (for example, **prefix** 10.10.10.1 255.255.255.0)
- **in-range**—For all types of attribute values (for example, **range** 10.10.10.1 10.10.10.200)
- **not-in-range**—For all types of attribute values (for example, **not-in-range** 10.10.10.1 10.10.10.200)

Attribute values can be any of the following:

- Integer
- Integer range
- IP address and a netmask
- IP address range
- String
- Name of an object-group

Note

- Attributes used in rule conditions are mostly directional attributes.
- Attributes used in zone conditions are all neutral attributes.

Examples

This example shows how to set up conditions for a web server zone:

```
VSG(config)# zone web_servers
VSG(config-zone)# condition 1 net.ip-address range 10.10.1.1 10.10.1.20
VSG(config-zone)# exit
```

This example shows how to set up conditions for an app server zone:

```
VSG(config)# zone app_servers
VSG(config-zone)# condition 1 net.ip-address range 10.10.1.21 10.10.1.40
VSG(config-zone)# exit
```

This example shows how to set up conditions for a database server zone:

```
VSG(config)# zone db_servers
VSG(config-zone)# condition 1 net.ip-address range 10.10.1.41 10.10.1.60
VSG(config-zone)# exit
```

Related Commands

Command	Description
rule	Enters the rule configuration submenu.
zone	Enters the zone configuration submenu.

Send document comments to vsg-docfeedback@cisco.com.

configure

To enter configuration mode, use the **configure** command.

configure

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC

SupportedUserRoles network-admin
network operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to enter configuration mode:

```
vsg# configure
Enter configuration commands, one per line. End with CNTL/Z.
vsg(config)#
```

Related Commands	Command	Description
	interface data 0	Enters interface configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

copy bootflash:

To copy files from the bootflash directory, use the **copy bootflash:** command.

copy bootflash:*//file-address destination-address*

Syntax Description		
	<i>//file-address</i>	Address of the files to copy.
	<i>destination-address</i>	Address of the destination directory.
		Use one of the following directories in the destination address:
		<ul style="list-style-type: none"> • bootflash: • debug: • ftp: • log: • modflash: • nvr: • nvram: • scp: • sftp: • system: • tftp: • volatile:

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	<p>This example shows how to copy a file from a remote bootflash directory to a local bootflash directory:</p> <pre>vsg# copy bootflash://jsmith@209.193.10.10/ws/jsmith-sjc/vsg-dplug.bin bootflash:/</pre>
-----------------	--

■ copy bootflash:

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	copy volatile:	Copies files from the volatile: directory.

Send document comments to vsg-docfeedback@cisco.com.

copy core:

To copy files from the core directory, use the **copy core:** command.

copy core: *//file-address destination-address*

Syntax Description	<i>//file-address</i>	Address of the files to copy.
	<i>destination-address</i>	Address of the destination directory. Use one of the following directories in the destination address: <ul style="list-style-type: none"> • bootflash: • ftp: • scp: • sftp: • tftp:
Defaults	None	
Command Modes	EXEC Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Usage Guidelines	None	
Examples	This example shows how to copy a file from a remote core directory to a local volatile directory: vsg# copy core://user@209.193.10.11/ps/user-rtg/vsgLog.txt volatile:/	
Related Commands	Command	Description
	copy log:	Copies files from the log directory.

■ `copy debug:`

Send document comments to vsg-docfeedback@cisco.com.

copy debug:

To copy files from the debug directory, use the **copy debug:** command.

copy debug: *//file-address destination-address*

Syntax Description	
<i>//file-address</i>	Address of the files to copy.
<i>destination-address</i>	Address of the destination directory.
	Use one of the following directories in the destination address:
	<ul style="list-style-type: none"> • bootflash: • debug: • ftp: • log: • modflash: • nvr: • nvram: • scp: • sftp: • system: • tftp: • volatile:

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	<p>This example shows how to copy a file from a remote debug directory to a local volatile directory:</p> <pre>vsg# copy debug://user@209.193.10.11/ps/user-rtg/vsgLog.txt volatile:/</pre>

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	copy bootflash:	Copies files from the bootflash directory.

■ **copy ftp:**

Send document comments to vsg-docfeedback@cisco.com.

copy ftp:

To copy files from the file transfer protocol (FTP) directory, use the **copy ftp:** command.

copy ftp:*//file-address destination-address*

Syntax Description	
<i>//file-address</i>	Address of the files to copy.
<i>destination-address</i>	Address of the destination directory.
	Use one of the following directories in the destination address:
	<ul style="list-style-type: none"> • bootflash: • debug: • log: • modflash: • nvr: • nvram: • system: • volatile:

Defaults	
	None

Command Modes	
	EXEC
	Global configuration (config)

SupportedUserRoles	
	network-admin
	network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to transfer a file from a remote FTP directory to a local bootflash directory:
	<pre>vsg# copy ftp://user@209.193.10.11/ps/user-rtg/vsg-dplug.bin bootflash:/</pre>

Related Commands	Command	Description
	copy sftp:	Copies the files from the SFTP directory.

Send document comments to vsg-docfeedback@cisco.com.

copy log:

To copy files from the log directory, use the **copy log:** command.

copy log:*//file-address destination-address*

Syntax Description	
<i>//file-address</i>	Address of the files to copy.
<i>destination-address</i>	Address of the destination directory.
	Use one of the following directories in the destination address:
	<ul style="list-style-type: none"> • bootflash: • debug: • ftp: • log: • modflash: • nvr: • nvram: • scp: • sftp: • system: • tftp: • volatile:

Defaults	None

Examples	<p>This example shows how to copy files from a remote modflash directory to a local volatile directory:</p> <pre>vsg# copy modflash://user@209.193.10.10/ws/user-sjc/vsg-mod.bin volatile:/</pre>
-----------------	---

■ copy modflash:

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	copy nvram:	Copies files from the NVRAM directory.

Send document comments to vsg-docfeedback@cisco.com.

copy nvram:

To copy files from the nonvolatile RAM (NVRAM) directory, use the **copy nvram:** command.

copy nvram:*//file-address destination-address*

Syntax Description	<i>//file-address</i>	Address of the NVRAM files to copy.
	<i>destination-address</i>	Address of the destination directory.
		Use one of the following directories in the destination address:
		<ul style="list-style-type: none"> • bootflash: • debug: • ftp: • log: • modflash: • nvram: • scp: • sftp: • system: • tftp: • volatile:

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	<p>This example shows how to copy files from a remote NVRAM directory to a local volatile directory:</p> <pre>vsg# copy nvram://user@209.193.10.10/ws/user-sjc/vsg-ram.bin volatile:/</pre>
-----------------	---

■ copy nvram:

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
copy modflash:	Copies files from a modflash directory.

Send document comments to vsg-docfeedback@cisco.com.

copy running-config

To copy the running configuration, use the **copy running-config** command.

copy running-config *destination-address* [**all-vdc**]

Syntax Description	<i>destination-address</i>	Address of the destination directory. Use one of the following directories in the destination address:
		<ul style="list-style-type: none"> • bootflash: • ftp: • nvram: • scp: • sftp: • tftp: • volatile:
	all-vdc	(Optional) Copies to all virtual device contexts (VDC).

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration
----------------------	------------------------------

Supported User Roles	network-admin
-----------------------------	---------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to copy the running configuration to the bootflash directory: vsg# copy running-config bootflash:
-----------------	--

Related Commands	Command	Description
	copy startup-config	Copies a startup configuration to a specified destination.

■ **copy scp:**

Send document comments to vsg-docfeedback@cisco.com.

copy scp:

To copy files from the Secure Control Protocol (SCP) directory, use the **copy scp:** command.

copy scp:*//file-address destination-address*

Syntax Description	
<i>//file-address</i>	Address of the files to copy.
<i>destination-address</i>	Address of the destination directory.
	Use one of the following directories in the destination address:
	<ul style="list-style-type: none"> • bootflash: • debug: • log: • modflash: • nvr: • running-config • startup-config • system: • volatile:

Defaults	None
-----------------	------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to copy files from a remote SCP directory to a local volatile directory: <pre>vsg# copy scp://user@209.193.10.11/ps/user-rtg/vsg-dplug.bin volatile:/</pre>
-----------------	---

Related Commands	Command	Description
	copy sftp:	Copies files from the SFTP directory.

Send document comments to vsg-docfeedback@cisco.com.

copy sftp:

To copy files from the Secure File Transfer Protocol (SFTP) directory, use the **copy sftp:** command.

copy sftp:*//file-address destination-address*

Syntax Description		
	<i>//file-address</i>	Address of the files to copy.
	<i>destination-address</i>	Address of the destination directory.
		Use one of the following directories in the destination address:
		<ul style="list-style-type: none"> • bootflash: • debug: • log: • modflash: • nvr: • nvram: • system: • volatile:

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

Supported User Roles	network-admin network-operator
-----------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to transfer a file from a remote SFTP directory to a local bootflash directory: vsg# copy sftp://jjones@209.193.10.11/ps/jjones-rtg/vsg-dplug.bin bootflash:/
-----------------	--

Related Commands	Command	Description
	copy tftp:	Copies files from the Trivial File Transfer Protocol (TFTP) directory.

Send document comments to vsg-docfeedback@cisco.com.

copy startup-config

To copy the startup configuration, use the **copy startup-config** command.

copy startup-config *destination-address* [**all-vdc**]

Syntax Description	<i>destination-address</i>	Address of the destination directory. Use one of the following directories in the destination address:
		<ul style="list-style-type: none"> • bootflash: • ftp: • nvr: • scp: • sftp: • tftp: • volatile:
	all-vdc	(Optional) Copies to all virtual device contexts (VDC).

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to copy the startup configuration to the bootflash directory: <pre>vsg# copy startup-config bootflash:</pre>
-----------------	--

Related Commands	Command	Description
	copy running-config	Copies a running configuration to a specified destination.

Send document comments to vsg-docfeedback@cisco.com.

copy system:

To copy files from the file directory, use the **copy system:** command.

copy system: *//file-address destination-address*

Syntax Description		
<i>//file-address</i>		Address of the files to copy.
<i>destination-address</i>		Address of the destination directory.
		You use one of the following directories in the destination address:
		<ul style="list-style-type: none"> • bootflash: • debug: • ftp: • log: • modflash: • nvram: • scp: • sftp: • system: • tftp: • volatile:

Defaults	None
-----------------	------

■ copy system:

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
copy bootflash:	Copies files to the bootflash directory.

Send document comments to vsg-docfeedback@cisco.com.

copy tftp:

To copy files from the Trivial File Transfer Protocol (TFTP) directory, use the **copy tftp:** command.

copy tftp:*//file-address destination-address*

Syntax Description	
<i>//file-address</i>	Address of the files to copy.
<i>destination-address</i>	Address of the destination directory.
	Use one of the following directories in the destination address:
	<ul style="list-style-type: none"> • bootflash: • debug: • log: • modflash: • nvr: • nvram: • system: • volatile:

Defaults	
	None

Command Modes	
	EXEC
	Global configuration (config)

Supported User Roles	
	network-admin
	network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to copy files from a remote TFTP directory to a local bootflash directory:
	<code>vsg# copy tftp://user@209.193.10.11/ps/user-rtg/vsg-dplug.bin bootflash:/</code>

Related Commands	Command	Description
	copy sftp:	Copies files from the SFTP directory.

■ **copy volatile:**

Send document comments to vsg-docfeedback@cisco.com.

copy volatile:

To copy files from the volatile directory, use the **copy volatile:** command.

copy volatile: *//file-address destination-address*

Syntax Description	
<i>//file-address</i>	Address of the file to copy.
<i>destination-address</i>	Address of the destination directory.
	Use one of the following directories in the destination address:
	<ul style="list-style-type: none"> • bootflash: • debug: • ftp: • log: • modflash: • nvr: • nvram: • scp: • sftp: • system: • tftp: • volatile:

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to copy files from a remote volatile directory to a local bootflash directory: <pre>vsg# copy volatile://user@209.193.10.10/ws/user-sjc/vsg-dplug.bin bootflash:/</pre>
-----------------	---

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
copy bootflash:	Copies files from the bootflash directory.

Send document comments to vsg-docfeedback@cisco.com.

debug logfile

To direct the output of the **debug** command to a specified file, use the **debug logfile** command. To revert to the default, use the **no** form of the command.

debug logfile *filename* [**size** *bytes*]

no debug logfile *filename* [**size** *bytes*]

Syntax Description

<i>filename</i>	Name of the file for debug command output. The filename is alphanumeric, case sensitive, and has a maximum of 64 characters.
size	(Optional) Specifies the size of the logfile in bytes.
<i>bytes</i>	(Optional) Bytes. The range is from 4096 to 10485760.

Defaults

Default filename: syslogd_debugs

Default file size: 10485760 bytes

Command Modes

EXEC

Global configuration (config)

Supported User Roles

network-admin

network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines

The logfile is created in the log: file system root directory.

Use the **dir log:** command to display the log files.

Examples

This example shows how to specify a debug logfile:

```
vsg# debug logfile debug_log
```

This example shows how to revert to the default debug logfile:

```
vsg# no debug logfile debug_log
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	dir	Displays the contents of a directory.
	show debug	Displays the debug configuration.
	show debug logfile	Displays the debug logfile contents.

Send document comments to vsg-docfeedback@cisco.com.

debug logging

To enable **debug** command output logging, use the **debug logging** command. To disable debug logging, use the **no** form of this command.

debug logging

no debug logging

Syntax Description This command has no arguments or keywords.

Defaults Disabled

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to enable the output logging for the **debug** command:

```
vsg# debug logging
```

This example shows how to disable the output logging for the **debug** command:

```
vsg# no debug logging
```

Related Commands	Command	Description
	debug logfile	Configures the logfile for the debug command output.

Send document comments to vsg-docfeedback@cisco.com.

delete

To delete the contents of a directory, use the **delete** command.

```
delete {bootflash: | debug: | log: | modflash: | volatile:}
```

Syntax Description	
bootflash:	Specifies the bootflash directory.
debug:	Specifies the debug directory.
log:	Specifies the log directory.
modflash:	Specifies the modflash directory.
volatile:	Specifies the volatile directory.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to delete the contents of the bootflash directory: vsg# delete bootflash:

Related Commands	Command	Description
	copy	Copies files to directories.

Send document comments to vsg-docfeedback@cisco.com.

dir

To display the contents of a directory or file, use the **dir** command.

dir [**bootflash:** | **debug:** | **log:** | **modflash:** | **volatile:**]

Syntax Description	
bootflash:	(Optional) Specifies the directory or filename.
debug:	(Optional) Specifies the directory or filename on expansion flash.
log:	(Optional) Specifies the directory or filename on log flash.
modflash:	(Optional) Specifies the directory or filename on module flash.
volatile:	(Optional) Specifies the directory or filename on volatile flash.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
	Use the pwd command to identify the directory you are currently working in. Use the cd command to change the directory you are currently working in.

Examples	
	This example shows how to display the contents of the bootflash: directory: <pre>vsg# dir bootflash:</pre>

Related Commands	Command	Description
	cd	Changes the current working directory.
	pwd	Displays the current working directory.

Send document comments to vsg-docfeedback@cisco.com.

echo

To echo an argument back to the terminal screen, use the **echo** command.

```
echo [backslash-interpret] [text]
```

Syntax Description	backslash-interpret	(Optional) Interprets any character following a backslash character (\) as a formatting option.
	<i>text</i>	(Optional) Text string to display. The text string is alphanumeric, case sensitive, can contain spaces, and has a maximum length of 200 characters. The text string can also contain references to CLI variables.

Defaults Displays a blank line.

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use this command in a command script to display information while the script is running. [Table 1](#) lists the formatting keywords that you can insert in the text when you include the **backslash-interpret** keyword.

Table 1 Formatting Options for the echo Command

Formatting Option	Description
\b	Specifies back spaces.
\c	Removes the new line character at the end of the text string.
\f	Inserts a form feed character.
\n	Inserts a new line character.
\r	Returns to the beginning of the text line.
\t	Inserts a horizontal tab character.
\v	Inserts a vertical tab character.

Send document comments to vsg-docfeedback@cisco.com.

Table 1 **Formatting Options for the echo Command (continued)**

Formatting Option	Description
\\	Displays a backslash character.
\\nnn	Displays the corresponding ASCII octal character.

Examples

This example shows how to display a blank line at the command prompt:

```
vsg# echo
vsg#
```

This example shows how to display a line of text at the command prompt:

```
vsg# echo Script run at $(TIMESTAMP).
Script run at 2008-08-12-23.29.24.
vsg#
```

This example shows how to use a formatting option in the text string:

```
vsg# echo backslash-interpret This is line #1. \nThis is line #2.
This is line #1.
This is line #2.
vsg#
```

Related Commands

Command	Description
run-script	Runs command scripts.

Send document comments to vsg-docfeedback@cisco.com.

end

To return to EXEC mode from any lower-level mode, use the **end** command.

end

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to enter VNMC policy agent mode and then how to return to EXEC mode:
-----------------	---

```
vsg# configure
VSG(config)# vnm-policy-agent
VSG(config-vnm-policy-agent)#
vsg(config-vnm-policy-agent)# end
vsg#
```

Related Commands	Command	Description
	configure	Enters configuration mode.

Send document comments to vsg-docfeedback@cisco.com.

event

To clear the event counter, use the **event** command.

event manager clear counter *counter-name*

Syntax	Description
event manager	Places you in the event manager.
clear counter	Clears the counter.
<i>counter-name</i>	Counter name. The text string is alphanumeric, case sensitive, can contain spaces, and has a maximum length of 28 characters.

Defaults Displays a blank line.

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to clear the event counter:
vsg# **event manager clear counter default**

Related Commands	Command	Description
	show event	Displays event information.

Send document comments to vsg-docfeedback@cisco.com.

event-log service-path

To enable logging debugs for the service-path process, use the **event-log service-path** command. To disable this feature, use the **no** form of this command.

```
event-log service-path {ac {error | info | inst-error | inst-info} | fm {debug | error | info} | sp
{error | info | pkt-detail | pkt-error | pkt-info | vptah-lib-error | vpath-lib-info |
vpath-lib-frag} [terminal]
```

```
no event-log service-path {ac {error | info | inst-error | inst-info} | fm {debug | error | info} | sp
{error | info | pkt-detail | pkt-error | pkt-info | vpath-lib-error | vpath-lib-info |
vpath-lib-frag} [terminal]
```

Syntax Description		
ac		Enables event logging for the AC module.
fm		Enables event logging for the Flow Manager module.
sp		Enables event logging for the service path module.
error		Enables logging for error events.
info		Enables logging for informational events.
inst-error		Enables logging for installation errors.
inst-info		Enables logging for installation information.
debug		Enables debug information.
pkt-detail		Enables display of packet details events.
pkt-error		Enables display of packet errors events.
pkt-info		Enables display of packet information events.
vpath-lib-error		Enables logging of vPath library errors events.
vpath-lib-info		Enables logging of vPath library information events.
vpath-lib-frag		Enables logging of vPath library fragmentation events.
terminal		Enables logging to be displayed at the terminal.

Defaults None

Command Modes EXEC

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was modified to include sp {vpath-lib-error vpath-lib-info vpath-lib-frag}
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Usage Guidelines

Event logs are written to the process buffer and can be viewed by the **show system internal event-log service-path** command. When the **terminal** option is entered, the event logs are displayed on the terminal.

Examples

This example shows how to display on the terminal the event logs for the service-path vPath library errors:

```
vsg# event-log service-path sp vpath-lib-error terminal
vsg#
```

Related Commands

Command	Description
show event-log all	This command displays all the event-log-s turned on in the system.
show system internal event-log service-path	This command displays the debug logs logged as a result of using the event-log service-path sp command.
event-log save	This command saves the event-log configuration across reboots.

Send document comments to vsg-docfeedback@cisco.com.

exit

To exit the current mode, use the **exit** command.

exit

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to exit the current mode:
-----------------	--

```
vsg(config)# exit
vsg#
```

Related Commands	Command	Description
	end	Places you in EXEC mode.

■ find

Send document comments to vsg-docfeedback@cisco.com.

find

To find file names that begin with a character string, use the **find** command.

find *filename-prefix*

Syntax Description	<i>filename-prefix</i>	First part or all of a filename. The filename prefix is case sensitive.
Defaults	None	
Command Modes	EXEC Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Usage Guidelines	The find command searches all subdirectories under the current working directory. You can use the cd and pwd commands to navigate to the starting directory.	
Examples	This example shows how to find a file name that has a prefix of “a”: vsg# find a	
Related Commands	Command	Description
	pwd	Lists the directory you are currently in.

Send document comments to vsg-docfeedback@cisco.com.

gunzip

To uncompress a compressed file, use the **gunzip** command.

gunzip *filename*

Syntax Description	<i>filename</i>	Name of the file.
--------------------	-----------------	-------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

Supported User Roles	network-admin network-operator
----------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	The compressed filename must have the .gz extension. You do not have to enter the .gz extension as part of the filename. The Cisco NX-OS software uses Lempel-Ziv 1977 (LZ77) coding for compression.
------------------	---

Examples	This example shows how to uncompress a compressed file: vsg# gunzip run_cfg.cfg
----------	---

Related Commands	Command	Description
	dir	Displays the directory contents.
	gzip	Compresses a file.

Send document comments to vsg-docfeedback@cisco.com.

gzip

To compress a file, use the **gzip** command.

gzip *filename*

Syntax Description	<i>filename</i>	File name.
---------------------------	-----------------	------------

Defaults	None	
-----------------	------	--

Command Modes	EXEC Global configuration (config)	
----------------------	---------------------------------------	--

SupportedUserRoles	network-admin network-operator	
---------------------------	-----------------------------------	--

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	After you use this command, the file is replaced with the compressed filename that has the .gz extension. The Cisco NX-OS software uses Lempel-Ziv 1977 (LZ77) coding for compression.
-------------------------	--

Examples	This example shows how to compress a file: <pre>vsg# gzip run_cfg.cfg</pre>
-----------------	--

Related Commands	Command	Description
	dir	Displays the directory contents.
	gunzip	Uncompresses a compressed file.

Send document comments to vsg-docfeedback@cisco.com.

install

To install an image upgrade, use the **install** command.

```
install all { iso | kickstart }
```

Syntax Description	Parameter	Description
	iso	Specifies an ISO image.
	kickstart	Specifies a kickstart image.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to install an ISO image upgrade:

```
vsg# install all iso bootflash://smith@209.165.200.226/test
```

Related Commands	Command	Description
	show install	Displays the software installation impact between two images.

Send document comments to vsg-docfeedback@cisco.com.

interface

To configure an interface on the Cisco VSG, use the **interface** command. To remove an interface, use the **no** form of the command.

interface { **data** *number* | **ethernet** *slot/port* | **loopback** *number* | **mgmt** *number* | **port-channel** *channel-number* }

no interface { **data** *number* | **ethernet** *slot/port* | **loopback** *number* | **mgmt** *number* | **port-channel** *channel-number* }

Syntax Description

data	Specifies data interface number.
<i>number</i>	Data interface number. The number is 0.
ethernet	Specifies the slot and port number for the Ethernet interface.
<i>slot/port</i>	Slot and port number of the interface.
loopback	Specifies a virtual interface number.
<i>number</i>	Virtual interface number. The range is from 0 to 1023.
mgmt	Specifies the management interface number.
<i>number</i>	Management interface number. The number is 0.
port-channel	Specifies a port-channel interface number.
<i>channel-number</i>	Port-channel interface number. The range is from 0 to 1023.

Defaults

None

Command Modes

Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to configure an interface:

```
vsg# interface data 0
```

This example shows how to remove an interface:

```
vsg# no interface data 0
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	show interface	Displays the interface and IP details, including Rx and Tx packets or bytes.

Send document comments to vsg-docfeedback@cisco.com.

ip

To configure IP details, use the **ip** command. To revert to the default settings, use the **no** form of this command.

ip { **access-list match-local-traffic** | **arp timeout** *seconds* | **domain-list** *name* | **domain-lookup** | **host** *name* | **igmp** | **name-server** | **route** | **routing event-history** | **tcp** | **tftp path-mtu-discovery** }

no ip { **access-list match-local-traffic** | **arp timeout** *seconds* | **domain-list** *name* | **domain-lookup** | **host** *name* | **igmp** | **name-server** | **route** | **routing event-history** | **tcp** | **tftp path-mtu-discovery** }

Syntax Description		
access-list match-local-traffic		Specifies the access-list matching for locally generated traffic.
arp timeout <i>seconds</i>		Specifies the Address Resolution Protocol (ARP) timeout. The range is from 60 to 28800.
domain-list <i>name</i>		Specifies an additional domain name. The name has a maximum of 64 characters.
domain-lookup		Enables or disables the domain name server (DNS).
host <i>name</i>		Specifies an entry to the IP hostname table.
igmp		Specifies event-history buffers or snooping in Internet Gateway Management Protocol (IGMP) global configuration mode.
name-server		Specifies the name-server address, IPv4 or IPv6.
route		Specifies the route IP prefix information.
routing event-history		Specifies the logs for routing events.
tcp		Configures global Transfer Control Protocol (TCP) parameters.
tftp path-mtu-discovery		Enables or disables path-MTU discovery on Trivial File Transfer Protocol (TFTP).

Defaults 1500

Command Modes Global configuration

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows the **ip** command being used to configure IP details:

```
vsg# configure  
vsg(config)# ip host testOne 209.165.200.231
```

Related Commands

Command	Description
show ip	Displays IP details.

Send document comments to vsg-docfeedback@cisco.com.

line

To specify the line configuration, use the **line** command.

```
line {com1 | console | vty}
```

Syntax Description	com1	Specifies the COM1 port and enters the COM1 port configuration mode.
	console	Specifies the console port and enters the console port configuration mode.
	vtty	Specifies the virtual terminal and enters the line configuration mode.

Command Default None

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to enter the COM1 port configuration mode:

```
vsg(config)# line com1
vsg(config-com1)#
```

This example shows how to enter the console port configuration mode:

```
vsg(config)# line console
vsg(config-console)#
```

This example shows how to enter the line configuration mode:

```
vsg(config)# line vty
vsg(config-line)#
```

Related Commands	Command	Description
	show line	Displays information about the COM1 port, console port configuration, and the line configuration.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

logging

To configure logging, use the **logging** command.

```
logging { abort | commit | console severity-level | distribute | event | level | logfile name | module
severity-level | monitor severity-level | server | source-interface loopback number |
timestamp time-type }
```

Syntax Description		
abort		Discards the logging Cisco Fabric Services (CFS) distribution session in progress without committing and then releases the lock.
commit		Applies the pending configuration pertaining to the logging CFS distribution session in progress in the fabric and then releases the lock.
console <i>severity-level</i>		Enables logging messages to the console session. To disable, use the no logging console command. The range is from 0 to 7.
distribute		Enables fabric distribution using CFS distribution for logging. To disable, use the no logging distribute command.
event		Logs interface events. To disable, use the no logging event command.
level		Enables logging of messages from a named facility at a specified severity level. To disable, use the no logging level command.
logfile <i>name</i>		Configures the specified log file that stores system messages. To disable, use the no logging logfile command.
module <i>severity-level</i>		Starts logging of module messages to the log file. To disable, use the no logging module command. The range is from 0 to 7.
monitor <i>severity-level</i>		Enables the logging of messages to the monitor (terminal line). To disable, use the no logging monitor command. The range is from 0 to 7.
server		Designates and configures a remote server for logging system messages. To disable, use the no logging server command.
source-interface <i>loopback number</i>		Enables a source interface for the remote syslog server, To disable, use the no logging source-interface command. The range is from 0 to 1023.
timestamp <i>time-type</i>		Sets the unit of time used for the system messages timestamp, in microseconds, milliseconds, or seconds. To disable, use the no logging timestamp command.

Defaults None

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to discard logging a CFS distribution session in progress:

```
vsg# configure
vsg(config)# logging abort
vsg(config)#
```

Related Commands

Command	Description
show logging	Displays logging information.

Send document comments to vsg-docfeedback@cisco.com.

match

To specify a condition used in an object-group, use the **match** command. To remove a condition in an object group, use the **no** form of this command.

```
match {eq | gt | lt | prefix | contains | in-range | neq | not-in-range} attribute-value1
      [attribute-value2]
```

Syntax Description		
eq		Specifies equal to a number or exactly matching a string.
gt		Specifies greater than.
lt		Specifies less than.
prefix		Specifies a prefix of a string or an IP address.
contains		Contains a substring.
in-range		Specifies a range of two integers, dates, times, or IP addresses.
neq		Specifies not equal to a number or not exactly matched with a string.
not-in-range		Negates the in-range operator.
<i>attribute-value1</i>		Value of the attribute such as 10.10.10.10 or name of an object-group such as "ipaddr-group."
<i>attribute-value2</i>		(Optional) Value of an attribute or netmask of a network address.

Command Default None

Command Modes Policy configuration (config-policy)

Supported User Roles network-admin

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines When multiple condition statements are used in an object-group, all conditions are considered to be OR'd during policy evaluation. The following operators require at least two attribute values:

- **prefix**—When applied against a subnet mask (for example, **prefix** 10.10.10.1 255.255.255.0)
- **in-range**—For all types of attribute values (for example, **in-range** 10.10.10.1 10.10.10.200)
- **not-in-range**—For all types of attribute values (for example, **not-in-range** 10.10.10.1 10.10.10.200)

Attribute values can be any of the following:

- Integer
- Integer range

Send document comments to vsg-docfeedback@cisco.com.

- IP address, or a netmask
- IP address range
- String

Examples

This example shows how to set conditions to be used in an object group:

```
vsg(config-policy)# match 1 eq 80
vsg(config-policy)# match 2 eq 443
vsg(config-policy)# exit
vsg(config)#
```

Related Commands

Command	Description
object-group	Enters the object-group configuration submode.

Send document comments to vsg-docfeedback@cisco.com.

mkdir (VSG)

To create a new directory, use the **mkdir** command.

```
mkdir { bootflash: | debug: | modflash: | volatile: }
```

Syntax Description	
bootflash:	Specifies bootflash: as the directory name.
debug:	Specifies debug: as the directory name.
modflash:	Specifies modflash: as the directory name.
volatile:	Specifies volatile: as the directory name.

Defaults	
	None

Command Modes	
	EXEC
	Global configuration (config)

SupportedUserRoles	
	network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
	4.2(1)VSG1(1)	This command was introduced for the Cisco VSG.

Examples	
	This example shows how to create the bootflash: directory:
	<pre>vsg# mkdir bootflash:</pre>

Related Commands	Command	Description
	cd	Changes the current working directory.
	dir	Displays the directory contents.
	pwd	Displays the name of the current working directory.

Send document comments to vsg-docfeedback@cisco.com.

ntp sync-retry (VSG)

To retry synchronization with configured servers, use the **ntp sync-retry** command. To stop this process, use the **no** form of this command.

ntp sync-retry

no ntp sync-retry

Syntax Description This command has no arguments or keywords.

Defaults Enabled

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced for the Cisco VSG.

Examples This example shows how to enable the Network Time Protocol (NTP) synchronization retry:

```
vsg# ntp sync-retry
```

This example shows how to disable the NTP synchronization retry:

```
vsg# no ntp sync-retry
```

Related Commands	Command	Description
	show clock	Displays the time and date.

Send document comments to vsg-docfeedback@cisco.com.

object-group

To reduce the number of rule configurations to accommodate the “or” conditions for the HTTP/HTTPS ports, use the **object-group** command. To remove the given object group object and all the relevant configurations, use the **no** form of this command.

object-group *group-name attribute-name*

Syntax Description	<i>group-name</i>	Name of the object group.
	<i>attribute-name</i>	Attribute designated for the group. The attribute used in an object group must be a neutral attribute.
Command Default	None	
Command Modes	Cisco VSG global configuration (config)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.
Usage Guidelines	This command enters the object-group submode. This command can be used to build a group of attribute values so the group can be used in a condition statement later on with the operator member .	
Examples	This example shows how to use the object-group command: <pre>vsg(config)# object-group http_ports net.port vsg(config-object-group)#</pre>	
Related Commands	Command	Description
	match	Specifies a condition used in an object group.

Send document comments to vsg-docfeedback@cisco.com.

password strength-check

To enable password strength checking, use the **password strength-check** command. To disable the password strength checking, use the **no** form of this command.

password strength-check

no password strength-check

Syntax Description This command has no arguments or keywords.

Defaults This feature is enabled by default.

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to enable the checking of the password strength:

```
vsg# config t
vsg(config)# password strength-check
vsg(config)#
```

This example shows how to disable the checking of the password strength:

```
vsg# config t
vsg(config)# no password strength-check
vsg(config)#
```

Related Commands	Command	Description
	show password strength-check	Displays the configuration for checking the password strength.
	username	Creates a user account.
	role name	Names a user role and places you in role configuration mode for that role.

Send document comments to vsg-docfeedback@cisco.com.

policy

To enter the policy configuration submode for constructing a firewall policy on the Cisco VSG, use the **policy** command. To remove the given policy object and all its bindings with other policy objects, use the **no** form of this command.

policy *policy-name*

Syntax Description	policy-name	Policy-map object.
Command Default	None	
Command Modes	Global configuration (config)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines Use the **policy** command to enable the policy configuration subcommand mode when the variable *policy-name* is used to specify the policy-map object.

The **policy** command configuration submode provides the following functions:

- Binding rules to a given policy.
- Creating rank or precedence among all the bound rules.
- Binding zones to a given policy.

Examples

This example shows how to set a 3-tiered policy object:

```
vsg(config)# policy 3-tiered-policy
vsg(config-policy)# rule inet_web_rule order 10
vsg(config-policy)# rule office_app_ssh_rule order 20
vsg(config-policy)# rule web_app_rule order 40
vsg(config-policy)# rule app_db_rule order 50
vsg(config-policy)# rule default_deny_rule order 60
vsg(config-policy)# exit
vsg(config)#
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	rule	Configures the binding of the policy with a given rule.
	zone	Configures the binding of the policy with a given zone.

Send document comments to vsg-docfeedback@cisco.com.

pwd

To view the current directory, use the **pwd** command.

pwd

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
	4.2(1)VSG1(1)	This command was introduced for the Cisco VSG.

Examples This example shows how to view the current directory:

```
vsg# pwd
bootflash:
vsg#
```

Related Commands	Command	Description
	cd	Changes the current directory.

Send document comments to vsg-docfeedback@cisco.com.

reload

To reboot both the primary and secondary Cisco VSG in a redundant pair, use the **reload** command.

reload

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin

Command History

Release	Modification
4.0(4)SV1(1)	This command was introduced.
4.2(1)VSG1(1)	This command was introduced for the Cisco VSG.

Usage Guidelines

To reboot only one of the Cisco VSGs in a redundant pair, use the **reload module** command instead.

Before reloading, use the **copy running-configuration to startup-configuration** command to preserve any configuration changes made since the previous reboot or restart.

After reloading it, you must manually restart the Cisco VSG.

Examples

This example shows how to reload both the primary and secondary Cisco VSG:

```
vsg(config)# reload
!!!WARNING! there is unsaved configuration!!!
This command will reboot the system. (y/n)? [n] y
2010 Dec 20 11:33:35 bl-vsg %PLATFORM-2-PFM_SYSTEM_RESET: Manual system restart from
Command Line Interface
```

Related Commands

Command	Description
reload module	Reloads the specified Cisco VSG (1 or 2) in a redundant pair.

Send document comments to vsg-docfeedback@cisco.com.

reload module

To reload one of the Cisco VSGs in a redundant pair, use the **reload module** command.

reload module *module* [**force-dnld**]

Syntax Description		
<i>module</i>		Module number (use 1 for the primary Cisco VSG or 2 for the secondary Cisco VSG).
force-dnld		(Optional) Reboots the specified module to force NetBoot and image download.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.
	4.2(1)VSG1(1)	This command was introduced for the Cisco VSG.

Usage Guidelines

To reboot both the Cisco VSGs in a redundant pair, use the **reload** command instead.

Before reloading, use the **copy running-configuration to startup-configuration** command to preserve any configuration changes made since the previous reboot or restart.

After reloading it, you must manually restart the Cisco VSG.

Examples

This example shows how to reload Cisco VSG 2, the secondary Cisco VSG in a redundant pair:

```
vsg# reload module 2
!!!WARNING! there is unsaved configuration!!!
This command will reboot the system. (y/n)? [n] y
2010 Dec 20 11:33:35 bl-vsg %PLATFORM-2-PFM_SYSTEM_RESET: Manual system restart from
Command Line Interface
```

Related Commands	Command	Description
	show version	Displays information about the software version.
	reload	Reboots both the primary and secondary Cisco VSG.

Send document comments to vsg-docfeedback@cisco.com.

restart

To manually restart a component, use the **restart** command. To disable manual restart, use the **no** form of this command.

restart

no restart

Syntax Description This command has no arguments or keywords.

Command Default Disabled

Command Modes EXEC

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines Do not use this command unless you are absolutely certain that there is no one else using the system.

Examples This example shows how to restart the Cisco VSG:

```
vsg# restart
```

Related Commands	Command	Description
	reload	Reboots the entire device.

Send document comments to vsg-docfeedback@cisco.com.

rmdir (VSG)

To remove a directory, use the **rmdir** command.

```
rmdir { bootflash: | debug: | modflash: | volatile: }
```

Syntax Description	
bootflash:	Deletes the bootflash: directory.
debug:	Deletes the debug: directory.
modflash:	Deletes the modflash: directory.
volatile:	Deletes the volatile: directory.

Defaults Removes the directory from the current working directory.

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to remove the bootflash directory:
vsg# **rmdir bootflash:**

Related Commands	Command	Description
	cd	Changes the current working directory.
	dir	Displays the directory contents.
	pwd	Displays the name of the current working directory.

Send document comments to vsg-docfeedback@cisco.com.

role

To configure a user role, use the **role** command. To delete a user role, use the **no** form of this command.

```
role { feature-group feature-group-name | name { name | network-observer } }
```

```
no role { feature-group name | [name name | network-observer] }
```

Syntax Description

feature-group <i>name</i>	Specifies a role for a feature group. The name can be any alphanumeric string up to 32 characters.
name <i>name</i>	Specifies the role name. The name can be any alphanumeric string up to 16 characters.
network-observer	Specifies the user role.

Defaults

This feature is enabled by default.

Command Modes

Global configuration

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to configure a user role for a feature group:

```
vsg# configure
vsg(config)# role feature-group name abc
vsg(config-role-featuregrp)#
```

Related Commands

Command	Description
show role	Displays the role configuration.
role name	Names a user role and places you in role configuration mode for that role.

Send document comments to vsg-docfeedback@cisco.com.

rule

To enter the configuration submode to build a firewall rule that consists of multiple conditions and actions, use the **rule** command. To remove the given rule object and all the relevant configurations, use the **no** form of this command.

rule *rule-name*

Syntax Description	<i>rule-name</i>	Specifies a rule object.
Command Default	None	
Command Modes	Global configuration (config)	
Supported User Roles	network-admin	
Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines Use the **rule** command to enter the rule configuration submode. The *rule-name* variable is used to specify the rule object that is to be configured.

Examples This example shows how to build firewall rules on the Cisco VSG:

```
vsg(config)# rule inet_web_rule
vsg(config-rule)# condition 1 dst.zone.name eq web_servers
vsg(config-rule)# condition 2 dst.net.port member_of http_ports
vsg(config-rule)# action permit
vsg(config-rule)# exit

vsg(config)# rule office_app_ssh_rule
vsg(config-rule)# condition 1 dst.zone.name eq app_servers
vsg(config-rule)# condition 2 src.net.ip-address prefix 192.10.1.0 \
255.255.255.0
vsg(config-rule)# condition 3 dst.net.port eq 22
vsg(config-rule)# action permit
vsg(config-rule)# exit

vsg(config)# rule web_app_https_rule
vsg(config-rule)# condition 1 src.zone.name eq web_servers
vsg(config-rule)# condition 2 dst.zone.name eq app_servers
vsg(config-rule)# condition 3 dst.net.port member_of http_ports
vsg(config-rule)# action permit
vsg(config-rule)# exit

vsg(config)# rule app_db_rule
```

Send document comments to vsg-docfeedback@cisco.com.

```
vsg(config-rule)# condition 1 src.zone.name eq app_servers
vsg(config-rule)# condition 2 dst.zone.name eq db_servers
vsg(config-rule)# action permit
vsg(config-rule)# exit

vsg(config)# rule default_deny_rule
vsg(config-rule)# action 1 deny
vsg(config-rule)# action 2 log
vsg(config-rule)# exit
```

Related Commands

Command	Description
condition	Specifies a condition statement used in a rule.
action	Specifies the actions to be executed when traffic characteristics match with the associated rule.

Send document comments to vsg-docfeedback@cisco.com.

run-script (VSG)

To run a command script that is saved in a file, use the **run-script** command.

```
run-script [bootflash: [> [bootflash: | ftp: | scp: | sftp: | tftp: | volatile:] | >> [bootflash: | ftp: |
scp: | sftp: | tftp: | volatile:] | | [cut | diff | egrep | grep | head | human | last | less | no-more |
sed | sort | sscp | tr | uniq | vsh | wc | xml | begin | count | end | exclude | include] | volatile:
 [> [bootflash: | ftp: | scp: | sftp: | tftp: | volatile:] | >> [bootflash: | ftp: | scp: | sftp: | tftp: |
volatile:] | | [cut | diff | egrep | grep | head | human | last | less | no-more | sed | sort | sscp | tr
| uniq | vsh | wc | xml | begin | count | end | exclude | include] ] [filename]
```

Syntax Description

bootflash:	(Optional) Indicates that the file containing the command script is located in the bootflash file system.
>	(Optional) Redirects the output to a file.
bootflash:	(Optional) Designates the destination filesystem path; in this case, the bootflash: directory.
ftp:	(Optional) Designates the destination filesystem path; in this case, the ftp: directory.
scp:	(Optional) Designates the destination filesystem path; in this case, the scp: directory.
sftp:	(Optional) Designates the destination filesystem path; in this case, the sftp: directory.
tftp:	(Optional) Designates the destination filesystem path; in this case, the tftp: directory.
volatile:	(Optional) Indicates that the file containing the command script is located in the volatile file system.
>>	(Optional) Redirects the output to a file in append mode.
 	(Optional) Pipes the command output to a filter.
volatile:	(Optional) Designates the destination filesystem path; in this case, the volatile: directory.
cut	(Optional) Prints selected parts of lines.
diff	(Optional) Shows difference between current and previous invocation (creates temp files— remove them with the diff-clean command and do not use it on commands with big outputs, such as show tech).
egrep	(Optional) Prints lines matching a pattern.
grep	(Optional) Prints lines matching a pattern.
head	(Optional) Displays only the first lines.
human	(Optional) Provides command output in human readable format (if permanently set to XML, otherwise it turns on XML for the next command).
last	(Optional) Displays only the last lines.
less	(Optional) Designates filter for paging.
no-more	(Optional) Turns off the pagination for command output.
sed	(Optional) Enables the stream editor (SED).
sort	(Optional) Enables the stream sorter.
sscp	(Optional) Enables the stream secure copy (SSCP).
tr	(Optional) Translates, squeezes, and/or deletes characters.
uniq	(Optional) Discards all but one of successive identical lines.
vsh	(Optional) Enables the shell that understands CLI commands.

Send document comments to vsg-docfeedback@cisco.com.

wc	(Optional) Enables word count, line count, and character count.
xml	(Optional) Enables output in XML format (according to .xsd definitions).
begin	(Optional) Begins with the line that matches the variable included after the command keyword.
count	(Optional) Enables count of the number of lines.
end	(Optional) Ends display with the line that matches the string input after the command keyword.
exclude	(Optional) Excludes the lines that match the string input after the command keyword.
include	(Optional) Includes the lines that match the string input after the command keyword.
<i>filename</i>	(Optional) The name of the file containing the command script. The name is case sensitive.

Defaults

None

Command Modes

EXEC

Global configuration (config)

SupportedUserRoles

network-admin

network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to run a command script that is saved in a file called Sample:

```
vsg(config)# run-script volatile:Sample
```

Related Commands

Command	Description
cd	Changes the current working directory.
copy	Copies files.
dir	Displays the contents of the working directory.
pwd	Displays the name of the present working directory (pwd).

Send document comments to vsg-docfeedback@cisco.com.

send

To send a message to an open session, use the **send** command.

```
send {message | session device message}
```

Syntax Description		
	<i>message</i>	Message.
	session	Specifies a specific session.
	<i>device</i>	Device type.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to send a message to an open session: <pre>vsg# send session sessionOne testing</pre> <pre>vsg#</pre>

Related Commands	Command	Description
	show banner	Displays a banner.

Send document comments to vsg-docfeedback@cisco.com.

setup

To use the basic system configuration dialog for creating or modifying a configuration file, use the **setup** command.

setup

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines The Basic System Configuration Dialog assumes the factory defaults. All changes made to your configuration are summarized for you at the completion of the setup sequence with an option to save the changes or not. You can exit the setup sequence at any point by pressing **Ctrl-C**.

Examples This example shows how to use the setup command to create or modify a basic system configuration:

```
vsg# setup
```

```
Enter the domain id<1-4095>: 400
```

```
Enter HA role[standalone/primary/secondary]: standalone
```

```
[#####] 100%
```

```
---- Basic System Configuration Dialog ----
```

```
This setup utility will guide you through the basic configuration of the system. Setup configures only enough connectivity for management of the system.
```

```
*Note: setup is mainly used for configuring the system initially, when no configuration is present. So setup always assumes system

snmp-server

To configure the Simple Network Management Protocol (SNMP) values, use the **snmp-server** command. To revert to default, use the **no** form of this command.

```
snmp-server {aaa-user cache-timeout seconds | community word | contact | context word |
counter | enable traps | globalEnforcePriv | host | location name | mib community-map
name | protocol | source-interface | tcp-session auth | user name}
```

```
no snmp-server {aaa-user cache-timeout seconds | community word | contact | context word |
counter | enable traps | globalEnforcePriv | host | location name | mib community-map
name | protocol | source-interface | tcp-session auth | user name}
```

Syntax Description	
aaa-user	Configures an SNMP timeout value for synchronized AAA users. To revert to the default, use no snmp-server aaa-user cache-timeout . The range is from 1 to 86400.
cache-timeout <i>seconds</i>	
community <i>word</i>	Creates an SNMP community name and assigns access privileges for the community. To remove the community or its access privileges, use the no snmp-server community command. The maximum number of characters is 32.
contact	Configure the sysContact, which is the SNMP contact name. To remove or modify the sysContact, use the no snmp-server contact command.
context <i>word</i>	Configures SNMP context name to logical network entity mapping. To remove the context, use the no snmp-server context command. The maximum number of characters is 32.
counter	Enables the SNMP cache counter and sets the timeout. To remove the counter, use the no snmp-server counter command.
enable traps	Enables SNMP notifications for traps of module notifications. To disable, use the no snmp-server enable traps command.
globalEnforcePriv	Globally enforces privacy for all SNMP users. To disable, use the no snmp-server globalEnforcePriv command.
host	Configures a host receiver for SNMPv1 or SNMPv2c traps. To remove the host, use the no snmp-server host command.
location <i>name</i>	Configures the sysLocation, which is the SNMP location name. To remove the sysLocation, use the no snmp-server location command. The maximum number of characters is 32.
mib community-map <i>name</i>	Configures the SNMP MIB community-map. To remove, use the no snmp-server mib community-map command. The maximum number of characters is 32.
protocol	Enables SNMP protocol operations. To disable, use the no snmp-server protocol command.
source-interface	Configure the SNMP source interface through which notifications are sent. To remove the notifications, use the no snmp-server source-interface command.
tcp-session auth	Enables a one-time authentication for SNMP over a TCP session. To disable authentication, use the no snmp-server tcp-session auth command.
user <i>name</i>	Defines a user who can access the SNMP engine. To deny access, use the no snmp-server user command. The maximum number of characters is 32.

Send document comments to vsg-docfeedback@cisco.com.

Defaults None

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to configure the AAA user synchronization timeout value:

```
vsg# configure
vsg(config)# snmp-server aaa-user cache-timeout 6000
vsg(config)#
```

Related Commands	Command	Description
	show snmp	Displays information about SNMP.

Send document comments to vsg-docfeedback@cisco.com.

ssh

To create a Secure Shell (SSH) session, use the **ssh** command.

```
ssh {hostname| connect | name}
```

Syntax Description	hostname	connect	name
	Hostname or user@hostname for the SSH session. The hostname is not case sensitive. The maximum number of characters is 64.	Connects to a named remote host.	Specifies the name of the SSH connection.

Defaults None

Command Modes EXEC

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines Cisco NX-OS software supports SSH version 2.

Examples This example shows how to start an SSH session:

```
vsg# ssh 10.10.1.1 vrf management
The authenticity of host '10.10.1.1 (10.10.1.1)' can't be established.
RSA key fingerprint is 9b:d9:09:97:f6:40:76:89:05:15:42:6b:12:48:0f:d6.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '10.10.1.1' (RSA) to the list of known hosts.
User Access Verification
Password:
```

Related Commands	Command	Description
	clear ssh session	Clears SSH sessions.
	ssh server enable	Enables the SSH server.

Send document comments to vsg-docfeedback@cisco.com.

ssh key

To generate a secure-shell (SSH) session key with a specific security configuration, use the **ssh key** command.

```
ssh key {dsa | rsa }
```

Syntax Description	Parameter	Description
	dsa	Generates DSA security keys. There is an option to force the generation of keys, even if the previous ones are present.
	rsa number	Generates RSA security keys at a specified level of bits. The range is 768 to 2048.

Defaults None

Command Modes Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines Cisco NX-OS software supports SSH version 2.

Examples This example shows how to generate an SSH session key:

```
vsg# configure
vsg(config)# ssh key rsa 770
```

Related Commands	Command	Description
	clear ssh session	Clears SSH sessions.
	ssh server enable	Enables the SSH server.

Send document comments to vsg-docfeedback@cisco.com.

system clis

To generate an event history, use the **system clis** command. To disable the event history, use the **no** form of this command.

```
system clis event-history { client | errors | ha | nvdb | parser }
```

```
no system clis event-history { client | errors | ha | nvdb | parser }
```

Syntax Description

event-history	Generates event history logs for the command line interface (CLI).
client	Generates a client interaction event history log.
errors	Generates an error event history log.
ha	Generates a high-availability (HA) event history log.
nvdb	Generates an NVDB and PSS event history log.
parser	Generates a parser event history event log.

Command Default

None

Command Modes

Global configuration (config)

Supported User Roles

network-administrator
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to generate an error event history log:

```
vsg# system clis event-history errors
```

Related Commands

Command	Description
show system clis event-history	Displays the event history of the CII servers.

Send document comments to vsg-docfeedback@cisco.com.

system cores

To copy cores to a destination, use the **system cores** command. To disable, use the **no** form of the command.

system cores tftp: *//server@ip-address*

no system cores tftp: *//server@ip-address*

Syntax Description	Parameter	Description
	tftp:	Specifies the Trivial File Transfer Protocol (TFTP) protocol.
	<i>server</i>	Destination server.
	<i>ip-address</i>	Destination IP address.

Command Default	Default Value
	None

Command Modes	Mode
	Global configuration (config)

Supported User Roles	User Roles
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	Example
	This example shows how to copy cores to a destination: vsg# system cores tftp://jjones@209.165.200.229

Related Commands	Command	Description
	show system cores	Displays the core transfer option.

Send document comments to vsg-docfeedback@cisco.com.

system default switchport

To return to system-level default values, use the **system default switchport** command. To disable the default switchport feature, use the **no** form of this command.

system default switchport [shutdown]

no system default switchport [shutdown]

Syntax Description	shutdown (Optional) Shuts down the admin state.				
Command Default	None				
Command Modes	Global configuration (config)				
Supported User Roles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to return to system-level default values:</p> <pre>vsg# system default switchport shutdown</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>show system resources</td> <td>Displays system resources.</td> </tr> </tbody> </table>	Command	Description	show system resources	Displays system resources.
Command	Description				
show system resources	Displays system resources.				

Send document comments to vsg-docfeedback@cisco.com.

system hap-reset

To reset local or remote supervisors after a high-availability (HA) failure, use the **system hap-reset** command. To disable the hap-reset feature, use the **no** form of the command.

system hap-reset

system no hap-reset

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to switch over to the standby supervisor:

```
vsg# system hap-reset
```

Related Commands	Command	Description
	show system redundancy	Displays the system redundancy status.

Send document comments to vsg-docfeedback@cisco.com.

system health

To check the system health, use the **system health** command.

system health check bootflash

Syntax	Description
check	Runs a consistency check on the compact flash.
bootflash	Checks the internal bootflash.

Command Default None

Command Modes EXEC

Supported User Roles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to check the system health:

```
vsg# system health check bootflash
```

Related Commands	Command	Description
	show system resources	Displays system resources.

Send document comments to vsg-docfeedback@cisco.com.

system heartbeat

To enable the system heartbeat, use the **system heartbeat** command. To disable the system heartbeat, use the **no** form of the command.

system heartbeat

system no heartbeat

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to enable the system heartbeat:

```
vsg# system heartbeat
```

Related Commands	Command	Description
	system health	Checks the system health status.

Send document comments to vsg-docfeedback@cisco.com.

system internal

To generate debug snapshots for services, use the **system internal** command.

system internal snapshot service *service-name*

Syntax Description		
	snapshot	Generates debug snapshots.
	service	Generates a debug snapshot for a service.
	<i>service-name</i>	Service name.

Command Default None

Command Modes EXEC

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to generate debug snapshots for services:

```
vsg# system internal snapshot service
```

Related Commands	Command	Description
	show system internal	Displays all internal commands.

Send document comments to vsg-docfeedback@cisco.com.

system jumbomtu

To set the maximum transmission units (MTU) to jumbo, use the **system jumbomtu** command.

```
system jumbomtu 9000
```

Syntax Description	9000	MTU size.
Command Default	None	
Command Modes	Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to set the MTU size to jumbo: vsg# system jumbomtu 9000	
Related Commands	Command	Description
	show system resources	Displays the system resource details.

Send document comments to vsg-docfeedback@cisco.com.

system memlog

To generate a memory log in bootflash, use the **system memlog** command.

```
system memlog
```

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to generate a memory log in bootflash:

```
vsg# system memlog
```

Related Commands	Command	Description
	show system memory-alerts-log	Displays a detailed log for memory alerts.
	show system memory-status	Displays memory status information.

[Send document comments to vsg-docfeedback@cisco.com.](mailto:vsg-docfeedback@cisco.com)

system memory-thresholds

To set system memory thresholds, use the **system memory-thresholds** command.

```
system memory-thresholds { minor minor-memory-threshold severe severe memory-threshold
critical critical-memory-threshold | threshold critical no-process-kill }
```

Syntax	Description
minor	Sets the minor memory threshold.
<i>minor-memory-threshold</i>	Minor threshold as a percentage of memory. The range is from 50 to 100.
severe	Sets the severe memory threshold.
<i>severe memory-threshold</i>	Severe threshold as a percentage of memory. The range is from 50 to 100.
critical	Sets the critical memory threshold.
<i>critical-memory-threshold</i>	Critical threshold as a percentage of memory. The range is from 50 to 100.
threshold	Sets the threshold behavior.
critical	Sets the critical memory threshold.
no-process-kill	Enables do not kill processes when out of memory.

Command Default None

Command Modes Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to set the memory threshold:

```
vsg# system memory-thresholds minor 60
```

Related Commands	Command	Description
	show system resources	Displays the system resources.

Send document comments to vsg-docfeedback@cisco.com.

system pss

To shrink PSS files, use the **system pss** command.

system pss shrink

Syntax Description	shrink	Shrinks the PSS files.
--------------------	--------	------------------------

Command Default	None
-----------------	------

Command Modes	EXEC
---------------	------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to shrink PSS files:
----------	---

```
vsg# system shrink pss
```

Related Commands	Command	Description
	show system pss	Displays the PSS shrink status.

Send document comments to vsg-docfeedback@cisco.com.

system redundancy

To set a system redundancy policy, use the **system redundancy** command.

```
system redundancy role {primary | secondary | standalone}
```

Syntax Description	role	Sets the redundancy role.
	primary	Specifies the primary redundant Cisco VSG.
	secondary	Specifies the secondary redundant Cisco VSG.
	standalone	Specifies no redundant Cisco VSG.

Command Default	None
-----------------	------

Command Modes	EXEC
---------------	------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to set the redundancy role: <pre>vsg# system redundancy role primary</pre>
----------	--

Related Commands	Command	Description
	show system redundancy	Displays the system redundancy status.

Send document comments to vsg-docfeedback@cisco.com.

system standby

To enable a system standby manual boot, use the **system standby** command. To disable a system standby manual boot, use the **no** form of this command.

system standby manual-boot

no system standby manual-boot

Syntax Description	manual-boot Specifies to perform a manual boot.				
Command Default	None				
Command Modes	EXEC				
SupportedUserRoles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to set a system standby manual boot:</p> <pre>vsg# system standby manual-boot</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>show system standby</td> <td>Displays the system standby manual boot option.</td> </tr> </tbody> </table>	Command	Description	show system standby	Displays the system standby manual boot option.
Command	Description				
show system standby	Displays the system standby manual boot option.				

Send document comments to vsg-docfeedback@cisco.com.

system startup-config

To initialize or unlock the system startup configuration, use the **system startup-config** command.

```
system startup-config {init | unlock lock id}
```

Syntax Description		
	init	Initializes the startup configuration.
	unlock	Unlocks the startup configuration.
	<i>lock id</i>	Lock identification number. The range is from 0 to 65536.

Command Default None

Command Modes EXEC

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to unlock the system startup configuration:

```
vsg# system startup-config unlock 1324
```

Related Commands	Command	Description
	show startup-config	Displays startup system information.

Send document comments to vsg-docfeedback@cisco.com.

system statistics

To reset the system statistics, use the **system statistics** command.

```
system statistics reset
```

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to reset the system statistics:

```
vsg# system statistics reset
```

Related Commands	Command	Description
	show system redundancy	Displays the system redundancy status.

Send document comments to vsg-docfeedback@cisco.com.

system switchover

To switch over to the standby supervisor in EXEC mode, use the **system switchover** command.

system switchover

To configure a system switchover in configuration mode, use the **system switchover** command.

system switchover {ha | warm}

Syntax Description	ha	Enables high availability.
	warm	Enables a warm switchover.

Command Default None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to switch over to the standby supervisor:
vsg# **system switchover**

Related Commands	Command	Description
	show redundancy	Displays the system redundancy status.

Send document comments to vsg-docfeedback@cisco.com.

system trace

To configure the system trace level, use the **system trace** command.

```
system trace {mask}
```

Syntax Description	<i>mask</i>	Mask name.
Command Default	None	
Command Modes	Global configuration (config)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to configure the system trace level: vsg# system trace dc1	
Related Commands	Command	Description
	system default	Configures system-level default values.

Send document comments to vsg-docfeedback@cisco.com.

system watchdog kdgb

To enable a system watchdog, use the **system watchdog** command. To disable a system watchdog, use the **no** form of this command.

system watchdog kdgb

no system watchdog kdgb

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to enable watchdog:

```
vsg# system watchdog
```

Related Commands	Command	Description
	system default	Configures system-level default values.

Send document comments to vsg-docfeedback@cisco.com.

tail

To display the end of a file, use the **tail** command.

```
tail { bootflash: filename [number] | debug: filename [number] | modflash: filename [number] | volatile: filename [number] }
```

Syntax Description		
bootflash:	Specifies the bootflash directory.	
<i>filename</i>	Name of the file.	
<i>number</i>	(Optional) Number of lines to display.	
debug:	Specifies the debug directory.	
modflash:	Specifies the modflash directory.	
volatile:	Specifies the volatile directory.	

Defaults 10 lines

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to display the last 10 lines of a file:

```
vsg# tail bootflash:startup.cfg
ip arp inspection filter marp vlan 9
ip dhcp snooping vlan 13
ip arp inspection vlan 13
ip dhcp snooping
ip arp inspection validate src-mac dst-mac ip
ip source binding 10.3.2.2 0f00.60b3.2333 vlan 13 interface Ethernet2/46
ip source binding 10.2.2.2 0060.3454.4555 vlan 100 interface Ethernet2/10
logging level dhcp_snoop 6
logging level eth_port_channel 6
```

This example shows how to display the last 20 lines of a file:

```
vsg# tail bootflash:startup.cfg 20
area 99 virtual-link 1.2.3.4
router rip Enterprise
router rip foo
```

Send document comments to vsg-docfeedback@cisco.com.

```

address-family ipv4 unicast
router bgp 33.33
event manager applet sdtest
monitor session 1
monitor session 2
ip dhcp snooping vlan 1
ip arp inspection vlan 1
ip arp inspection filter marp vlan 9
ip dhcp snooping vlan 13
ip arp inspection vlan 13
ip dhcp snooping
ip arp inspection validate src-mac dst-mac ip
ip source binding 10.3.2.2 0f00.60b3.2333 vlan 13 interface Ethernet2/46
ip source binding 10.2.2.2 0060.3454.4555 vlan 100 interface Ethernet2/10
logging level dhcp_snoop 6
logging level eth_port_channel 6

```

Related Commands

Command	Description
cd	Changes the current working directory.
copy	Copies files.
dir	Displays the directory contents.
pwd	Displays the name of the current working directory.

Send document comments to vsg-docfeedback@cisco.com.

telnet

To create a Telnet session, use the **telnet** command.

```
telnet {ipv4-address | hostname} [port-number | vrf vrf-name]
```

Syntax Description		
<i>ipv4-address</i>		IPv4 address of the remote device.
<i>hostname</i>		Hostname of the remote device. The name is alphanumeric, case sensitive, and has a maximum of 64 characters.
<i>port-number</i>		(Optional) Port number for the Telnet session. The range is from 1 to 65535.
vrf <i>vrf-name</i>		(Optional) Specifies the virtual routing and forwarding (VRF) name used for the Telnet session. The name is case sensitive.

Defaults	
	Port 23
	Default VRF

Command Modes	
	EXEC
	Global configuration (config)

Supported User Roles	
	network-admin
	network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	
	This example shows how to start a Telnet session:
	<pre>vsg# telnet 10.10.1.1 vrf management</pre>

Related Commands	Command	Description
	clear line	Clears Telnet sessions.
	telnet server enable	Enables the Telnet server.

Send document comments to vsg-docfeedback@cisco.com.

terminal alias

To display a terminal alias, use the **terminal alias** command. To disable the terminal alias, use the **no** form of this command.

terminal alias *word persist*

no terminal alias *word persist*

Syntax Description

<i>word</i>	Name of the alias.
<i>persist</i>	Alias configuration saved.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Examples

This example shows how to displays an alias for engineering:

```
vsg# terminal alias engineering
```

Related Commands

Command	Description
show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal color

To enable colorization of the command prompt, command line, and output, use the **terminal color** command. To disable terminal color, use the **no** form of this command.

terminal color *evening persist*

no terminal color *evening persist*

Syntax	Description
<i>evening</i>	Designator that sets the screen background to black.
<i>persist</i>	Designator that saves the configuration.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to set the colorization of the command line:
vsg# **terminal color evening persist**

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal dont-ask

To turn off the “Are you sure?” questions when a command is entered, use the **terminal dont-ask** command. To disable the terminal don’t ask question, use the **no** form of this command.

terminal dont-ask *persist*

no terminal dont-ask *persist*

Syntax Description	<i>persist</i> Designator that saves the configuration.				
Defaults	None				
Command Modes	EXEC Global configuration (config)				
SupportedUserRoles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to turn off the “Are you sure?” question when a command is entered:</p> <pre>vsg# terminal dont-ask persist</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>show terminal</td> <td>Displays the terminal configuration.</td> </tr> </tbody> </table>	Command	Description	show terminal	Displays the terminal configuration.
Command	Description				
show terminal	Displays the terminal configuration.				

Send document comments to vsg-docfeedback@cisco.com.

terminal edit-mode

To set the edit mode to vi, use the **terminal edit-mode** command. To return the edit mode to emacs, use the **no** form of this command.

terminal edit-mode vi

no terminal edit-mode vi

Syntax Description	vi Sets the edit mode to vi.				
Defaults	emacs				
Command Modes	EXEC Global configuration (config)				
SupportedUserRoles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to set the command line edition keys:</p> <pre>vsg# terminal edit-mode vi</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>show terminal</td> <td>Displays the terminal configuration.</td> </tr> </tbody> </table>	Command	Description	show terminal	Displays the terminal configuration.
Command	Description				
show terminal	Displays the terminal configuration.				

Send document comments to vsg-docfeedback@cisco.com.

terminal event-manager

To bypass the CLI event manager, use the **terminal event-manager** command.

terminal event-manager bypass

Syntax Description	bypass	Bypasses the CLI event manager.
--------------------	--------	---------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to bypass the CLI event manager: vsg# terminal event-manager bypass
----------	--

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal history

To disable the recall of EXEC mode commands when in configuration mode, use the **terminal history** command. To enable recall, use the **no** form of this command.

terminal history no-exec-in-config

no terminal history no-exec-in-config

Syntax Description	no-exec-in-config Disables the recall of EXEC mode commands when in configuration mode.				
Defaults	None				
Command Modes	EXEC Global configuration (config)				
SupportedUserRoles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to set terminal history properties:</p> <pre>vsg# terminal history no-exec-in-config</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>show terminal</td> <td>Displays the terminal configuration.</td> </tr> </tbody> </table>	Command	Description	show terminal	Displays the terminal configuration.
Command	Description				
show terminal	Displays the terminal configuration.				

■ terminal length

Send document comments to vsg-docfeedback@cisco.com.

terminal length

To set the number of lines that appear on the terminal screen, use the **terminal length** command.

terminal length *number*

Syntax Description	<i>number</i>	Number of lines. The range of valid values is 0 to 511.
Defaults	28 lines	
Command Modes	EXEC Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Usage Guidelines	Set <i>number</i> to 0 to disable pausing.	
Examples	This example shows how to set the number of lines that appear on the screen: vsg# terminal length 60	
Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal log-all

To log all commands including the **show** commands, use the **terminal log-all** command.

terminal log-all

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to log all commands:
vsg# **terminal log-all**

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal monitor

To copy syslog output to the current terminal line, use the **terminal monitor** command.

terminal monitor

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to copy syslog output to the current terminal line:

```
vsg# terminal monitor
```

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal output

To display **show** command output in XML, use the **terminal output** command. To display **show** command output in text, use the **no** form of this command.

terminal output xml

no terminal output xml

Syntax Description	xml	Displays show command output in XML.
Defaults	None	
Command Modes	EXEC Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to display show command output in XML: vsg# terminal output xml	
Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal redirection-mode

To set the redirection mode, use the **terminal redirection-mode** command.

```
terminal redirection-mode {ascii | zipped}
```

Syntax Description	ascii	Sets the redirection mode to ASCII.
	zipped	Sets the redirection mode to zipped.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to set the redirection mode to ASCII:
vsg# **terminal redirection-mode ascii**

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal session-timeout

To set the terminal session timeout, use the **terminal session-timeout** command.

terminal session-timeout *time*

Syntax Description	<i>time</i>	Timeout time, in seconds. The range is from 0 to 525600.
Defaults	None	
Command Modes	EXEC Global configuration (config)	
Supported User Roles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Usage Guidelines	Set <i>time</i> to 0 to disable terminal session timeout.	
Examples	This example shows how to set the terminal session timeout: vsg# terminal session-timeout 100	
Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal terminal-type

To specify the terminal type, use the **terminal terminal-type** command.

terminal terminal-type *type*

Syntax Description	<i>type</i>	Terminal type.
Defaults	None	
Command Modes	EXEC Global configuration (config)	
SupportedUserRoles	network-admin network-operator	
Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.
Examples	This example shows how to specify the terminal type: vsg# terminal terminal-type vt100	
Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal tree-update

To update the main parse tree, use the **terminal tree-update** command.

terminal tree-update

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to update the main parse tree:

```
vsg# terminal tree-update
```

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal verify-only

To verify commands, use the **terminal verify-only** command.

terminal verify-only username *word*

Syntax Description	username	Specifies the username for AAA authorization.
	<i>word</i>	Username.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to verify commands: vsg# terminal verify-only
----------	--

Related Commands	Command	Description
	show terminal	Displays the terminal configuration.

Send document comments to vsg-docfeedback@cisco.com.

terminal width

To set the terminal width, use the **terminal width** command.

terminal width *width*

Syntax Description	<i>width</i> Sets the number of characters on a single line. The range is from 24 to 511.				
Defaults	102 columns				
Command Modes	EXEC Global configuration (config)				
SupportedUserRoles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				
Examples	<p>This example shows how to set the terminal width:</p> <pre>vsg# terminal width 60</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>show terminal</td> <td>Displays the terminal configuration.</td> </tr> </tbody> </table>	Command	Description	show terminal	Displays the terminal configuration.
Command	Description				
show terminal	Displays the terminal configuration.				

Send document comments to vsg-docfeedback@cisco.com.

test policy-engine

To test the policy engine on a RADIUS server or in a server group, use the **test policy-engine** command.

```
test policy-engine {simulate-pe-req | simulate-zone-req}
```

Syntax Description		
	simulate-pe-req	Simulates the policy engine lookup.
	simulate-zone-req	Simulates the policy engine zone.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to test the policy engine:
vsg# **test policy-engine simulate-zone-req**

Related Commands	Command	Description
	show policy-engine	Displays policy-engine statistics.

Send document comments to vsg-docfeedback@cisco.com.

test-policy-engine simulate-pe-req policy

To enter the policy-engine configuration submode for unit testing or verification of a policy configuration, use the **test-policy-engine simulate-pe-req policy** command is used.

test-policy-engine simulate-pe-req policy *policy-name*

Syntax Description	<i>policy-name</i>	Policy to be tested or verified for configuration parameters.
Command Default	None	
Command Modes	Global configuration (config)	
SupportedUserRoles	network-admin	
Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.
Examples	This example shows how to test the ext-company policy. <pre>vsm(config)# test policy-engine simulate-pe-req policy ext-company</pre>	
Related Commands	Command	Description
	attribute	Specifies the particular attribute to be tested in the policy configuration.

Send document comments to vsg-docfeedback@cisco.com.

traceroute

To discover routes, use the **traceroute** command.

```
traceroute {A.B.C.D. | host-name} [source src-ipv4-addr | vrf vrf-name | show-mpls-hops]
```

Syntax Description		
<i>A.B.C.D.</i> <i>host-name</i>		IPv4 address or hostname of the destination device. The name is case sensitive.
vrf <i>vrf-name</i>		(Optional) Specifies the virtual routing and forwarding (VRF) instance to use. The name is case sensitive.
show-mpls-hops		(Optional) Displays the Multiprotocol Label Switching (MPLS) hops.
source <i>src-ipv4-addr</i>		(Optional) Specifies a source IPv4 address. The format is <i>A.B.C.D.</i>

Defaults

Uses the default VRF.

Does not show the MPLS hops.

Uses the management IPv4 address for the source address.

Command Modes

EXEC

Global configuration (config)

Supported User Roles

network-admin

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines

Use the **traceroute6** command to use IPv6 addressing for discovering the route to a device.

Examples

This example shows how to discover a route to a device:

```
vsg# traceroute 172.28.255.18 vrf management
traceroute to 172.28.255.18 (172.28.255.18), 30 hops max, 40 byte packets
 1 172.28.230.1 (172.28.230.1) 0.746 ms 0.595 ms 0.479 ms
 2 172.24.114.213 (172.24.114.213) 0.592 ms 0.51 ms 0.486 ms
 3 172.20.147.50 (172.20.147.50) 0.701 ms 0.58 ms 0.486 ms
 4 172.28.255.18 (172.28.255.18) 0.495 ms 0.43 ms 0.482 ms
```

Related Commands

Command	Description
traceroute6	Discovers the route to a device using IPv6 addressing.

Send document comments to vsg-docfeedback@cisco.com.

username *name* password

To set a password for the username, use the **username *name* password** command.

username *name* password {**0** *password* | **5** *password* | *password*}

Syntax Description		
0 <i>password</i>	Specifies a password. 0 denotes that the password that follows should be set in clear text. The maximum size for <i>password</i> is 64 characters.	
5 <i>password</i>	Specifies a password. 5 denotes that the password that follows should be encrypted. The maximum size for <i>password</i> is 64 characters.	
<i>password</i>	Specifies a password in clear text. The maximum size for <i>password</i> is 64 characters.	

Defaults None

Command Modes Global configuration (config)

SupportedUserRoles network-admin

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples This example shows how to set a password for the username:

```
vsg# configure
vsg(config)# username admin password 5 q0w9e8R7
```

Usage Guidelines The Cisco VSG does not support multiple user accounts. It supports only the default **admin** user account.

Related Commands	Command	Description
	show users	Displays users.

■ where

Send document comments to vsg-docfeedback@cisco.com.

where

To display your current context, use the **where** command.

where [**detail**]

Syntax Description	detail	(Optional) Displays detailed context information.
--------------------	--------	---

Defaults	Displays summary context information.
----------	---------------------------------------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Examples	This example shows how to display summary context information:
----------	--

```
vsg# where
      admin@firewall
vsg#
```

Related Commands	Command	Description
	pwd	Displays what directory you are in.

Send document comments to vsg-docfeedback@cisco.com.

write erase

To erase configurations in persistent memory areas, use the **write erase** command.

write erase [boot | debug]

Syntax Description	boot	(Optional) Erases the boot variable and management 0 interface configurations.
	debug	(Optional) Erases only the debug configuration.

Defaults Erases all configuration in persistent memory except for the boot variable, mgmt0 interface, and debug configuration.

Command Modes Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines When information is corrupted or unusable, use the **write erase** command to erase the startup configuration in the persistent memory. Entering this command returns the device to its initial state, except for the boot variable, mgmt0 interface, and debug configurations. To erase those configurations, specifically use the **boot** and **debug** options.

Examples This example shows how to erase the startup configuration:

```
vsg(config)# write erase
Warning: This command will erase the startup-configuration.
Do you wish to proceed anyway? (y/n) [n] y
```

This example shows how to erase the boot variable and mgmt0 interface configuration in the persistent memory:

```
vsg(config)# write erase boot
```

This example shows how to erase the debug configuration in the persistent memory:

```
vsg(config)# write erase debug
```

■ write erase

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	copy running-config startup-config	Copies the running configuration to the startup configuration.
	show running-config	Displays the startup configuration.

Send document comments to vsg-docfeedback@cisco.com.

zone

To configure a zone definition that is used to build VM-to-zone mapping on the control plane, use the **zone** command to enter the zone configuration submode. To disable this feature, use the **no** form of this command.

zone *zone-name*

Syntax Description	<i>zone-name</i> Zone object that is to be configured.				
Command Default	None				
Command Modes	Global configuration (config)				
Supported User Roles	network-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(2)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(2)	This command was introduced.
Release	Modification				
4.2(1)VSG1(2)	This command was introduced.				
Usage Guidelines	<p>Use the zone command to enter the zone configuration submode. The <i>zone-name</i> variable specifies a zone object.</p> <p>The no option removes the given zone object and all relevant configurations (for example, condition statements).</p>				
 Note	Attributes used in a zone condition are all neutral attributes.				
Examples	<p>This example shows how to enter the zone configuration submode:</p> <pre>vsg(config)# zone zone-name vsg(config-zone)#</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>condition</td> <td>Specifies the parameters and rules for the security zone.</td> </tr> </tbody> </table>	Command	Description	condition	Specifies the parameters and rules for the security zone.
Command	Description				
condition	Specifies the parameters and rules for the security zone.

Send document comments to vsg-docfeedback@cisco.com.

CHAPTER **3**

Cisco Virtual Security Gateway Show Commands

This chapter provides information about Cisco Virtual Security Gateway (VSG) **show** commands.

Send document comments to vsg-docfeedback@cisco.com.

show aaa

To display information about authentication, authorization, and accounting (AAA), use the **show aaa** command.

```
show aaa [accounting | authentication | authorization | groups | users]
```

Syntax Description	
accounting	(Optional) Displays the accounting configuration.
authentication	(Optional) Displays the authentication configuration.
authorization	(Optional) Displays the authorization configuration.
groups	(Optional) Displays configured groups.
users	(Optional) Displays remotely authenticated users.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
	You can use the following operators with the show aaa command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples	
	This example shows how to display the AAA configuration:

```
vsg# show aaa authentication
      default: local
      console: local
vsg#
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
password	Configures the password.

Send document comments to vsg-docfeedback@cisco.com.

show ac-driver

To display application container statistics, use the **show ac-driver** command.

show ac-driver statistics

Syntax Description	statistics	Displays application container statistics.
--------------------	------------	--

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(3.1)	The output of the show ac-driver command was changed to show the new application container statistics.
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show ac-driver command: <ul style="list-style-type: none"> >—Redirects the output to a file. >>—Redirects the output to a file in append mode. —Pipes the command output to a filter.
------------------	--

Examples	This example shows how to display application container statistics: <pre>vsg# show ac-driver statistics #Packet Statistics: Rcvd Total 5510 Buffers in Use 3188 Rcvd vPath L2 Pkts 1140 Rcvd vPath IPV4 Pkts 0 Rcvd VPath Pkts 1140 Sent to VPath 1140 Sent to Service-Path 1140 Sent to Control-Path 4370 All Drops 0 Non-vPath LLC 0 Non-vPath OUI 0 Non-vPath type L2 0 Non-vPath IPV4 0 Non-vPath IPV4 UDP 0 Service-Path not Inited 0 Service-Path Down 0 Rcvd Bad Descriptor 0 Send to Service-Path Err 0 Packet Offset Err 0 Send Bad Descriptor 0 Send NIC Err 0</pre>
----------	--

Send document comments to vsg-docfeedback@cisco.com.

vsg#

Related Commands	Command	Description
	show vsg	Displays information about a Cisco VSG.

Send document comments to vsg-docfeedback@cisco.com.

show accounting

To display the accounting log, use the **show accounting** command.

show accounting log [**start-time** *year month day time* **end-time** *year month day time*]

Syntax Description	log	Accounting log.
	start-time	(Optional) Specifies the date in the log the display will start.
	<i>year month day time</i>	(Optional) Year, day and time. The range for <i>year</i> is from 1970 to 2030, and is in YYYY format. The values for <i>month</i> are Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, and Dec . The range for <i>day</i> is from 1 to 31, and is in dd format. <i>time</i> is in HH:MM:SS.
	end-time	(Optional) Specifies the date in the log the display will end.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show accounting** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a show command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display the accounting log:

```
vsg# show accounting log
Fri Jan 21 17:19:35 2011:update:171.69.17.61@pts/0:admin:dir (SUCCESS)
Fri Jan 21 17:23:36 2011:update:10.193.73.130@ssh.3115:vsnbetauser:test vnspl
1 (SUCCESS)
Fri Jan 21 17:24:04 2011:update:10.193.73.130@ssh.3120:vsnbetauser:test vnspl
1 (SUCCESS)
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
<code>show logging</code>	Displays the logging configuration and the contents of the log file.

Send document comments to vsg-docfeedback@cisco.com.

show banner

To display the banner, use the **show banner** command.

show banner motd

Syntax Description	motd	Specifies the message of the day.
--------------------	------	-----------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show banner command: <ul style="list-style-type: none"> • >—Redirects the output to a file. • >>—Redirects the output to a file in append mode. • —Pipes the command output to a filter.
------------------	---

Examples	This example shows how to display the banner: <pre>vsg# show banner motd Nexus 1000V VSG vsg#</pre>
----------	---

Related Commands	Command	Description
	banner	Creates a banner message.

Send document comments to vsg-docfeedback@cisco.com.

show boot

To display boot variables, use the **show boot** command.

```
show boot [auto-copy | module | sup-1 | sup-2 | variables]
```

Syntax Description	
auto-copy	(Optional) Displays whether auto copy is enabled or disabled.
module	(Optional) Displays the boot variables for a specific module or all modules.
sup-1	(Optional) Displays the current and next load boot variables for supervisor 1.
sup-2	(Optional) Displays the current and next load boot variables for supervisor 2.
variables	(Optional) Displays a list of boot variables.

Defaults	
None	

Command Modes	
EXEC	
Global configuration (config)	

SupportedUserRoles	
network-admin	
network-operator	

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
You can use the following operators with the show boot command:	

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples	
This example shows how to display boot variables:	

```
vsg# show boot
Current Boot Variables:

sup-1
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
sup-2
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
No module boot variable set
```

Send document comments to vsg-docfeedback@cisco.com.

Boot Variables on next reload:

```
sup-1
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
sup-2
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
No module boot variable set
vsg#
```

Related Commands

Command	Description
boot	Creates boot variables.

Send document comments to vsg-docfeedback@cisco.com.

show cdp

To display Cisco Discovery Protocol (CDP) information, use the **show cdp** command.

```
show cdp {all | entry | global | interface | internal | neighbors | traffic}
```

Syntax Description		
all		Displays all interfaces in the CDP database.
entry		Displays CDP entries in the CDP database.
global		Displays global CDP information.
interface		Displays CDP information for an interface.
internal		Displays private memory statistics for the UUID.
neighbors		Displays CDP neighbors.
traffic		Displays CDP traffic statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show cdp** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a show command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display all interfaces in the CDP database:

```
vsg# show cdp all
Interface Index :83886080
Interface mgmt0:
  Operational status: up
  Config status: enabled
```

show cdp

Send document comments to vsg-docfeedback@cisco.com.

```
Refresh time: 60
Hold time: 180

Interface Index :117440512
Interface data0:
  Operational status: up
  Config status: enabled
  Refresh time: 60
  Hold time: 180
vsg#
```

Related Commands

Command	Description
cdp	Configures CDP parameters.

Send document comments to vsg-docfeedback@cisco.com.

show cli

To display command line interface (CLI) information, use the **show cli** command.

```
show cli {alias | dynamic | history | interface | internal | list | syntax | variables}
```

Syntax Description	alias	Displays the CLI alias.
	dynamic	Display the current range of dynamic parameters.
	history	Displays the CLI command history.
	interface	Displays the CLI interface table.
	internal	Displays the CLI statistics.
	list	Displays the CLI command syntax.
	syntax	Displays the Extended Backus–Naur Form (EBNF) syntax of all commands.
	variables	Displays the CLI variables.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show cli** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display CLI variables:

```
vsg# show cli variables
VSH Variable List
-----
```

■ show cli

Send document comments to vsg-docfeedback@cisco.com.

```
SWITCHNAME="vsg"  
TIMESTAMP="2011-02-14-17.33.37"  
vsg#
```

Related Commands

Command	Description
cli var	Defines CLI variables.

Send document comments to vsg-docfeedback@cisco.com.

show clock

To display the clock, use the **show clock** command.

show clock [detail]

Syntax Description	detail	(Optional) Displays the day, the time, and the year.
--------------------	--------	--

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

Supported User Roles	network-admin network-operator
----------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show clock command: <ul style="list-style-type: none"> >—Redirects the output to a file. >>—Redirects the output to a file in append mode. —Pipes the command output to a filter.
------------------	--

Examples	This example shows how to display the clock:
----------	--

```
vsg# show clock detail
Mon Feb 14 17:47:44 UTC 2011
vsg#
```

Related Commands	Command	Description
	clock	Manages the system clock.

Send document comments to vsg-docfeedback@cisco.com.

show copyright

To display copyright information, use the **show copyright** command.

show copyright

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show copyright** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display copyright information:

```
vsg# show copyright
Cisco Nexus Operating System (NX-OS) Software
TAC support: http://www.cisco.com/tac
Copyright (c) 2002-2011, Cisco Systems, Inc. All rights reserved.
The copyrights to certain works contained in this software are
owned by other third parties and used and distributed under

http://www.opensource.org/licenses/lgpl-2.1.php
vsg#
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	show version build-info	Displays build information.

Send document comments to vsg-docfeedback@cisco.com.

show cores

To display all core dumps, use the **show cores** command.

show cores

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show cores** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a show command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display all core dumps:

```
vsg# show cores
```

Related Commands	Command	Description
	show event-log	Displays the event log.

Send document comments to vsg-docfeedback@cisco.com.

show debug

To show debug flags, use the **show debug** command.

```
show debug [aaa | arp | ascii-cfg | bootvar | capability | cdp | cert-enroll | clis | core | ethpm |
evmc | fm | fs-daemon | igmp | im | ip | ipconf | ipv6 | kadb | klm-rswem | logfile | module |
monitor | msp | mvsh | ntp | platform | plug in | port-channel | redundancy | res_mgr |
scheduler | security | snmp | system | tcap | ttyd | vdc | vlan | vnm | vnm-pa | vsh | vshd | xml]
```

Syntax Description

aaa	(Optional) Displays AAA debugging flags.
arp	(Optional) Displays ARP debugging flags.
ascii-cfg	(Optional) Displays ASCII-CFG debugging flags.
bootvar	(Optional) Displays boot variables debugging flags.
capability	(Optional) Displays capability debugging flags.
cdp	(Optional) Displays CDP debugging flags.
cert-enroll	(Optional) Displays certificate enrollment debugging flags.
clis	(Optional) Displays CLI debugging flags.mmm
core	(Optional) Displays core daemon debugging flags.
ethpm	(Optional) Displays ETHPM debugging flags.
evmc	(Optional) Displays EVMC debugging flags.
fm	(Optional) Displays feature manager debugging flags.
fs-daemon	(Optional) Displays FS daemon debugging flags.
igmp	(Optional) Displays PIM debugging flags.
im	(Optional) Displays IM debugging flags.
ip	(Optional) Displays IP information.
ipconf	(Optional) Displays IPCONF debugging flags.
ipv6	(Optional) Displays IPv6 information.
kadb	(Optional) Displays Kernel ADB debugging flags.
klm-rwsem	(Optional) Displays RWSEM driver debugging flags.
logfile	(Optional) Displays the log file.
module	(Optional) Displays module debugging flags.
monitor	(Optional) Displays Ethernet Span debugging flags.
msp	(Optional) Displays MSP debugging flags.
mvsh	(Optional) Displays MVSH debugging flags.
ntp	(Optional) Displays NTP debugging flags.
platform	(Optional) Displays platform manager debugging flags.
plugin	(Optional) Displays plugin debugging flags.
port-channel	(Optional) Displays port-channel debugging flags.
redundancy	(Optional) Displays redundancy driver debugging flags.
res_mgr	(Optional) Displays resource manager debugging flags.
scheduler	(Optional) Displays scheduler debugging flags.
security	(Optional) Displays security debugging flags.

Send document comments to vsg-docfeedback@cisco.com.

snmp	(Optional) Displays SNMP server debugging flags.
system	(Optional) Displays system debugging flags.
tcap	(Optional) Displays exception logger debugging flags.
tttd	(Optional) Displays TTYD debugging flags.
vdc	(Optional) Displays VDC manager debugging flags.
vlan	(Optional) Displays VLAN manager debugging flags.
vmm	(Optional) Displays VMM debugging flags.
vnm-pa	(Optional) Displays VNM PA debugging flags.
vsh	(Optional) Displays VSH debugging flags.
vshd	(Optional) Displays VSHD debugging flags.
xml	(Optional) Displays XML debugging flags.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show debug** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display AAA debug flags:

```
vsg# show debug aaa
```

Related Commands	Command	Description
	show debug-filter	Displays debugging filters.

Send document comments to vsg-docfeedback@cisco.com.

show debug-filter

To display debug filters, use the **show debug-filter** command.

```
show debug-filter {all | arp | igmp | ip | ipv6}
```

Syntax Description		
	all	Displays all debugs filters.
	arp	Displays Address Resolution Protocol (ARP) debug filters.
	igmp	Displays Internet Group Management Protocol (IGMP) debug filters.
	ip	Displays IP information.
	ipv6	Displays IPv6 information.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
	You can use the following operators with the show debug-filter command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples	
	This example shows how to display debug filters: vsg# show debug-filter all

Related Commands	Command	Description
	show debug	Displays debugging flags.

Send document comments to vsg-docfeedback@cisco.com.

show environment

To display information about the system environment, use the **show environment** command.

show environment [**clock** | **fan** | **power** | **temperature**]

Syntax Description		
clock	(Optional)	Displays clock information.
fan	(Optional)	Displays fan information.
power	(Optional)	Displays power capacity and power distribution information.
temperature	(Optional)	Displays temperature sensor information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show environment** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display information about the system fan:

```
vsg# show environment fan
Fan:
-----
Fan          Model          Hw          Status
-----
ChassisFan1          0.0          Ok
ChassisFan2          0.0          None
Fan Air Filter : NotSupported
vsg#
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	show clock	Displays the system clock.

Send document comments to vsg-docfeedback@cisco.com.

show event manager internal

To display event manager events, use the **show event manager internal** command.

show event manager internal [evmc | mvsh | errors]

Syntax Description		
	evmc	(Optional) Displays event manager events.
	mvsh	(Optional) Displays memory allocation statistics.
	errors	(Optional) Displays the error log.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show event manager** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display event manager errors:

```
vsg# show event manager internal errors
1) Event:E_DEBUG, length:253, at 232142 usecs after Wed Feb 16 15:20:07 2011

[100] fu_sdb_handle_update: validation fail,
fu_is_state_active = 1,
fu_is_sync_pss_to_standby_enabled = 0,
mts_sync_event_get(mts_msg) = 0,
create_del) = 0

2) Event:E_DEBUG, length:43, at 232138 usecs after Wed Feb 16 15:20:07 2011
[100] fu_sdb_handle_update: validation fail
```

Send document comments to vsg-docfeedback@cisco.com.

- 3) Event:E_DEBUG, length:55, at 232136 usecs after Wed Feb 16 15:20:07 2011
[100] fu_sync_pss_to_standby_apply:Set of checks failed
- 4) Event:E_DEBUG, length:58, at 971337 usecs after Wed Feb 16 15:20:02 2011
[100] fu_sync_pss_to_standby_apply:Input event not MTS msg
- 5) Event:E_DEBUG, length:58, at 971525 usecs after Wed Feb 16 15:19:57 2011
[100] fu_sync_pss_to_standby_apply:Input event not MTS msg
- 6) Event:E_DEBUG, length:58, at 971719 usecs after Wed Feb 16 15:19:52 2011

show feature

To display system features, use the **show feature** command.

show feature

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show feature** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display system features:

```
vsg# show feature
Feature Name      Instance  State
-----
dhcp-snooping    1         disabled
http-server      1         enabled
lACP              1         disabled
netflow          1         disabled
port-profile-roles 1         disabled
private-vlan     1         disabled
sshServer        1         enabled
tacacs           1         enabled
telnetServer     1         enabled
vsg#
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	show http-server	Displays the status of the HTTP server.

Send document comments to vsg-docfeedback@cisco.com.

show file

To confirm a directory's existence, use the **show file** command.

```
show file { bootflash: | debug: | modflash: | volatile: }
```

Syntax Description	
bootflash:	Specifies the bootflash directory.
debug:	Specifies the debug directory.
modflash:	Specifies the modflash directory.
volatile:	Specifies the volatile directory.

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	<p>You can use the following operators with the show file command:</p> <ul style="list-style-type: none"> >—Redirects the output to a file. >>—Redirects the output to a file in append mode. —Pipes the command output to a filter.
-------------------------	--

Examples	<p>This example shows how to confirm the existence of the bootflash directory:</p> <pre>vsg# show file bootflash: /bin/showfile: /bootflash/: Is a directory vsg#</pre>
-----------------	---

Related Commands	Command	Description
	pwd	Displays the current directory.

Send document comments to vsg-docfeedback@cisco.com.

show hardware

To display hardware statistics, use the **show hardware** command.

show hardware [**capacity** | **internal** | **stats**]

Syntax Description	
capacity	(Optional) Displays usage levels.
internal	(Optional) Displays internal hardware information.
stats	(Optional) Displays hardware statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show hardware** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display management 0 port statistics:

```
vsg# show hardware internal mgmt0 stats
eth1    Link encap:Ethernet HWaddr 00:50:56:BB:00:38
        inet addr:10.193.73.138 Bcast:10.193.79.255 Mask:255.255.248.0

        collisions:0 txqueuelen:1000
        RX bytes:162479674502 (151.3 GiB) TX bytes:192218320 (183.3 MiB)

vsg#
```

■ show hardware

Send document comments to vsg-docfeedback@cisco.com.

Related Commands	Command	Description
	show interface	Displays interface status and information.

Send document comments to vsg-docfeedback@cisco.com.

show hostname

To display the hostname, use the **show hostname** command.

show hostname

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show hostname** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the hostname:

```
vsg# show hostname
VSG129-2
vsg#
```

Related Commands	Command	Description
	show hosts	Displays the hosts.

Send document comments to vsg-docfeedback@cisco.com.

show hosts

To display hosts, use the **show hosts** command.

show hosts

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show hosts** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display hosts:

```
vsg# show hosts
DNS lookup enabled
Name/address lookup uses domain service
Name servers are 255.255.255.255
Host Address
tst1 209.165.200.227
tst2 209.165.200.229
vsg#
```

Related Commands	Command	Description
	show hostname	Displays the hostname.

Send document comments to vsg-docfeedback@cisco.com.

show http-server

To display the status of the HTTP server, use the **show http-server** command.

show http-server

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show http-server** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows to display the status of the HTTP server:

```
vsg# show http-server
http-server not enabled
vsg#
```

Related Commands	Command	Description
	show feature	Displays system features.

Send document comments to vsg-docfeedback@cisco.com.

show incompatibility

To display incompatibilities with an image, use the **show incompatibility** command.

```
show incompatibility system { bootflash: | volatile: }
```

Syntax Description		
system		Displays directories.
bootflash:		Specifies the bootflash directory.
volatile:		Specifies the volatile directory.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show incompatibility** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows to display incompatibilities with an image:

```
vsg# show incompatibility system bootflash:
```

Related Commands	Command	Description
	show version image	Displays the software version of an image.

Send document comments to vsg-docfeedback@cisco.com.

show inspect ftp statistics

To display inspection File Transfer Protocol (FTP) statistics, use the **show inspect ftp statistics** command.

```
show inspect ftp statistics [svs-domain]
```

Syntax Description	svs-domain (Optional) Specifies the SVS domain identification number.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

Supported User Roles	network-admin network-operator
-----------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show inspect ftp statistics** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows to display inspection FTP statistics:

```
vsg# show inspect ftp statistics
Input packets          1000
Dropped packets       6
Reset-drop packets    0
New connections       1
Deleted connections   0
IPC errors            0
IPC allocation errors 0
vsg#
```

Related Commands	Command	Description
	show ip tftp	Displays TFTP client information.

Send document comments to vsg-docfeedback@cisco.com.

show install all

To display installation logs, use the **show install all** command.

```
show install all {failed-standby | failure-reason | impact | status}
```

Syntax Description	failed-standby	Description
	failed-standby	Displays a log that reports failed-standby installations.
	failure-reason	Displays a log that reports the reason for failed installations.
	impact	Displays a log that reports the impact of installations.
	status	Displays a log that reports the status of the current installation.

Defaults	None
	None

Command Modes	EXEC
	Global configuration

Supported User Roles	network-admin
	network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show install all command:
	<ul style="list-style-type: none"> >—Redirects the output to a file. >>—Redirects the output to a file in append mode. —Pipes the command output to a filter.

Examples	This example shows how to display a log that reports the status of the current installation:
	<pre>vsg# show install all status No installation has taken place since the last reboot. vsg#</pre>

Related Commands	Command	Description
	show version image	Displays the software version of an image.

Send document comments to vsg-docfeedback@cisco.com.

show interface

To display information about interfaces, use the **show interface** command.

```
show interface [brief | capabilities | counters | data | description | ethernet | loopback |
mac-address | mgmt | port-channel | snmp-ifindex | status | switchport | transceiver | trunk]
```

Syntax	Description
brief	(Optional) Displays brief information about an interface.
capabilities	(Optional) Displays information about interface capabilities.
counters	(Optional) Displays interface counters.
data	(Optional) Displays the data interface.
description	(Optional) Displays a description of an interface.
ethernet	(Optional) Displays Ethernet IEEE 802.3z interfaces.
loopback	(Optional) Displays the loopback interface.
mac-address	(Optional) Displays the MAC address of an interface.
mgmt	(Optional) Displays the management interface.
port-channel	(Optional) Displays port-channel interfaces.
snmp-ifindex	(Optional) Displays the SNMP interface index.
status	(Optional) Displays the interface line status.
switchport	(Optional) Displays the switchport interface.
transceiver	(Optional) Displays interface transceiver information.
trunk	(Optional) Displays trunk interface information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Usage Guidelines

You can use the following operators with the **show interface** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples

This example shows how to display information about the management 0 interface:

```
vsg# show interface mgmt 0
mgmt0 is up
  Hardware: Ethernet, address: 0050.56bb.0038 (bia 0050.56bb.0038)
  Internet Address is 10.193.73.138/21
  MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation ARPA
  full-duplex, 10 Gb/s
  Auto-Negotiation is turned on
  1 minute input rate 44136 bits/sec, 62 packets/sec
  1 minute output rate 1808 bits/sec, 1 packets/sec
  Rx
    755797571 input packets 131701 unicast packets 2575417 multicast packets
    753090453 broadcast packets 107614075553 bytes
  Tx
    1240518 output packets 1144680 unicast packets 43411 multicast packets
    52427 broadcast packets 203763544 bytes
vsg#
```

Related Commands

Command	Description
show ip interface	Displays IP interface information.

Send document comments to vsg-docfeedback@cisco.com.

show ip

To display IP statistics, use the **show ip** command.

```
show ip {adjacency | arp | client | igmp | interface | internal | logging | netstack | process | route
| static-route | tftp | traffic}
```

Syntax Description		
adjacency		Displays the IP adjacency table.
arp		Displays IP Address Resolution Protocol (ARP) table and statistics.
client		Displays clients registered with the IP process.
igmp		Display IP address Internet Group Management Protocol (IGMP) status and configuration.
interface		Display IP interface information.
internal		Display internal IP information.
logging		Displays the IP policy logging table.
netstack		Displays the netstack local cache.
process		Display global IP information.
route		Displays routing information.
static-route		Displays configured static routes.
tftp		Displays Trivial File Transfer Protocol (TFTP) client information.
traffic		Displays IP software processed traffic statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Send document comments to vsg-docfeedback@cisco.com.

Usage Guidelines

You can use the following operators with the **show ip** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples

This example shows how to display IP traffic statistics:

```
vsg# show ip traffic
IP Software Processed Traffic Statistics
-----
Transmission and reception:
  Packets received: 647601245, sent: 1145486, consumed: 0,
  Forwarded, unicast: 1099007, multicast: 0, Label: 0
Opts:
  end: 0, nop: 0, basic security: 0, loose source route: 0
  timestamp: 0, record route: 0

```

Related Commands

Command	Description
show ipv6	Displays IPv6 information.

Send document comments to vsg-docfeedback@cisco.com.

show ipv6

To display IPv6 statistics, use the **show ipv6** command.

```
show ipv6 {adjacency | icmp | mld | nd | neighbor | route | routers}
```

Syntax Description	Parameter	Description
	adjacency	Displays the IPv6 adjacency table.
	icmp	Displays ICMPv6 information.
	mld	Displays Multicast Listener Discovery information.
	nd	Displays Neighbor Discovery interface information.
	neighbor	Displays IPv6 neighbor information.
	route	Displays the IPv6 routing table.
	routers	Displays neighbor routing information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show ipv6** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to display an IPv6 adjacency table:

```
vsg# show ipv6 adjacency summary
IPv6 AM Table - Adjacency Summary

  Static   : 2
  Dynamic  : 03
  Others   : 0
  Total    : 5

vsg#
```

Related Commands

Command	Description
show ip	Displays IP information.

Send document comments to vsg-docfeedback@cisco.com.

show kernel internal

To display kernel information, use the **show kernel** command.

```
show kernel internal {aipc | cpuhogmon | ide-statistics | malloc-stats | meminfo | messages |
                    skb-stats | softnetstat}
```

Syntax Description		
aipc		Displays kernel AIPC information.
cpuhogmon		Displays CPU hog monitoring.
ide-statistics		Displays IDE statistics
malloc-stats		Displays malloc statistics.
meminfo		Displays kernel memory usage information.
messages		Displays kernel messages.
skb-stats		Displays SK buffer allocation statistics.
softnetstat		Displays kernel network queue information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show kernel internal** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display information about memory:

```
vsg# show kernel internal meminfo
MemTotal:      1944668 kB
MemFree:       909024 kB
Buffers:       70880 kB
Cached:        397144 kB
```

■ `show kernel internal`

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
<code>show system internal kernel</code>	Displays kernel information.

Send document comments to vsg-docfeedback@cisco.com.

show line

To display the command line configuration, use the **show line** command.

```
show line [com1 | console]
```

Syntax Description	com1	(Optional) Displays the auxiliary command line configuration.
	console	(Optional) Displays the console command line configuration.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show line** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the command line configuration:

```
vsg# show line
line Console:
  Speed:          9600 baud
  Databits:       8 bits per byte
  Stopbits:       1 bit(s)
  Parity:         none
  Modem In:       Disable
  Modem Init-String -
    default : ATE0Q1&D2&C1S0=1\015

line Aux:
  Speed:          9600 baud
  Databits:       8 bits per byte
  Stopbits:       1 bit(s)
  Parity:         none
```

show line

Send document comments to vsg-docfeedback@cisco.com.

```
Modem In: Disable
Modem Init-String -
    default : ATE0Q1&D2&C1S0=1\015
Hardware Flowcontrol: ON
```

vsg#

Related Commands

Command	Description
cli	Configures the command line.

show logging

To display logging information, use the **show logging** command.

```
show logging [console | info | internal | last | level | logfile | module | monitor | pending |
pending-diff | server | session | status | timestamp]
```

Syntax Description	
console	(Optional) Displays the console logging configuration.
info	(Optional) Displays the logging configuration.
internal	(Optional) Displays syslog information.
last	(Optional) Displays the last few lines of a log.
level	(Optional) Displays the facility logging configuration.
logfile	(Optional) Displays a log file.
module	(Optional) Displays the module logging configuration.
monitor	(Optional) Displays the monitor logging configuration.
pending	(Optional) Displays the server address pending configuration.
pending-diff	(Optional) Displays the server address pending configuration.
server	(Optional) Displays the server logging configuration.
session	(Optional) Displays the logging session status.
status	(Optional) Displays the logging status.
timestamp	(Optional) Displays the logging time-stamp configuration.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show logging** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Send document comments to vsg-docfeedback@cisco.com.

When you enter a **show** command that displays a long list of data, you can press **Ctrl-c** at any time to exit that list.

Examples

This example shows how to display the logfile:

```
VSG129-2# show logging logfile start-seqn 1

Related Commands

Command	Description
show event-log	Displays the event log.

Send document comments to vsg-docfeedback@cisco.com.

show ntp

To display Network Time Protocol (NTP) information, use the **show ntp** command.

show ntp [**internal** | **peer-status** | **peers** | **rts-update** | **source** | **statistics** | **timestamp-status**]

Syntax Description	
internal	(Optional) Displays internal NTP information.
peer-status	(Optional) Displays the status of all the peers.
peers	(Optional) Displays all the peers.
rts-update	(Optional) Displays the status of RTS.
source	(Optional) Displays the source IP address.
statistics	(Optional) Displays NTP statistics.
timestamp-status	(Optional) Displays the status of the time-stamp check.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show ntp** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display local NTP statistics:

```
VSG129-2# show ntp statistics local
system uptime:          2669747
time since reset:      2669747
old version packets:   0
new version packets:  10
unknown version number: 0
bad packet format:    0
packets processed:    0
```

Send document comments to vsg-docfeedback@cisco.com.

```
bad authentication:    0
vsg#
```

Related Commands

Command	Description
show clock	Displays the time.

Send document comments to vsg-docfeedback@cisco.com.

show password

To enable the password strength check, use the **show password** command.

show password strength-check

Syntax Description	strength-check	Checks the strength of the password.
--------------------	----------------	--------------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show password command: <ul style="list-style-type: none"> • >—Redirects the output to a file. • >>—Redirects the output to a file in append mode. • —Pipes the command output to a filter.
------------------	---

Examples	This example shows how to enable password strength check:
----------	---

```
vsg# show password strength-check
Password strength check enabled
vsg#
```

Related Commands	Command	Description
	show aaa	Display authentication and authorization information.

Send document comments to vsg-docfeedback@cisco.com.

show platform internal

To display platform manager information, use the **show platform internal** command.

show platform { **all** | **errors** | **event-history** | **info** | **mem-stats** | **msgs** }

Syntax Description		
all		Displays platform information.
errors		Displays the platform manager error log.
event-history		Displays platform manager event history.
info		Displays platform manager internal information.
mem-stats		Displays platform manager memory allocation statistics.
msgs		Displays platform manager message logs.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show platform** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display platform manager memory statistics:

```
VSG129-2# show platform internal mem-stats
Inside pfm_cli_show_memstats
sending mts msg 18
```

```
Private Mem stats for UUID : Malloc track Library(103) Max types: 5
-----
```

■ **show platform internal**

Send document comments to vsg-docfeedback@cisco.com.

```

Curr alloc: 414 Curr alloc bytes: 19803(19k)

Private Mem stats for UUID : Non mtrack users(0) Max types: 81
-----
Curr alloc: 149 Curr alloc bytes: 1322797(1291k)

Private Mem stats for UUID : libsdwrap(115) Max types: 22
-----
Curr alloc: 11 Curr alloc bytes: 1448(1k)

Private Mem stats for UUID : Associative_db library(175) Max types: 14
-----
Curr alloc: 6 Curr alloc bytes: 200(0k)

Private Mem stats for UUID : Event sequence library(158) Max types: 4
-----
Curr alloc: 0 Curr alloc bytes: 0(0k)

Private Mem stats for UUID : Associative_db utils library(174) Max types: 4
-----
Curr alloc: 0 Curr alloc bytes: 0(0k)

Private Mem stats for UUID : libfsrv(404) Max types: 11
-----
Curr alloc: 0 Curr alloc bytes: 0(0k)

Private Mem stats for UUID : FSM Utils(53) Max types: 68
-----
Curr alloc: 136 Curr alloc bytes: 7760(7k)

Private Mem stats for UUID : Platform Manager(24) Max types: 25
-----
Curr alloc: 0 Curr alloc bytes: 0(0k)

Curr alloc: 716 Curr alloc bytes: 1352008 (1320k)
vsg#

```

Related Commands

Command	Description
show system internal mem-alerts-log	Displays the memory alert log.

Send document comments to vsg-docfeedback@cisco.com.

show policy-engine

To display policy engine statistics, use the **show policy-engine** command.

```
show policy-engine {policy-name | stats}
```

Syntax Description		
	<i>policy-name</i>	Name of the policy engine.
	stats	Displays policy engine statistics.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the show policy-engine command:
------------------	---

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples	This example shows how to display policy engine statistics:
----------	---

```
vsg# show policy-engine stats

Policy Match Stats:

p1           :      30378
  r1         :      30378 (Permit)
  NOT_APPLICABLE :          0 (Drop)

vsg#
```

Related Commands	Command	Description
	policy	Configures a policy.

Send document comments to vsg-docfeedback@cisco.com.

show processes

To display processes, use the **show processes** command.

```
show processes [cpu | log | memory | vdc]
```

Syntax Description	
cpu	(Optional) Displays information about CPU processes.
log	(Optional) Displays information about process logs.
memory	(Optional) Displays information about memory processes.
vdc	(Optional) Displays information about VDC processes.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show processes** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display information about memory processes:

```
vsg(config)# show processes memory
```

PID	MemAlloc	MemLimit	MemUsed	StackBase/Ptr	Process
1	147456	0	1441792	bffffe60/bffff950	init
2	0	0	0	0/0	ksoftirqd/0
3	0	0	0	0/0	desched/0
4	0	0	0	0/0	events/0
5	0	0	0	0/0	khelper

Send document comments to vsg-docfeedback@cisco.com.

show redundancy status

To display redundancy status, use the **show redundancy status** command.

show redundancy status

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show redundancy status** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display redundancy status:

```
vsg# show redundancy status
Redundancy role
-----
      administrative:  standalone
      operational:    standalone

Redundancy mode
-----
      administrative:  HA
      operational:    None

This supervisor (sup-1)
-----
      Redundancy state:  Active
      Supervisor state:  Active
      Internal state:    Active with no standby
```

Send document comments to vsg-docfeedback@cisco.com.

```

Other supervisor (sup-2)
-----
Redundancy state:   Not present

Supervisor state:  N/A
Internal state:    N/A

System start time:      Fri Jan 21 15:45:28 2011

System uptime:         32 days, 1 hours, 46 minutes, 2 seconds
Kernel uptime:        32 days, 0 hours, 14 minutes, 45 seconds
Active supervisor uptime: 32 days, 1 hours, 45 minutes, 20 seconds
vsg#

```

Related Commands

Command	Description
show system redundancy status	Displays the system redundancy status.

show resource

To display resources, use the **show resource** command.

```
show resource [internal | m4route-mem | m6route-mem | monitor-session | port-channel |
u4route-mem | u6route-mem | vlan | vrf ]
```

Syntax	Description
internal	(Optional) Displays resource manager information
m4route-mem	(Optional) Displays m4route-mem information.
m6route-mem	(Optional) Displays m6route-mem information.
monitor-session	(Optional) Displays monitor session information.
port-channel	(Optional) Displays port-channel information.
u4route-mem	(Optional) Displays u4route-mem information.
u6route-mem	(Optional) Displays u6route-mem information.
vlan	(Optional) Displays VLAN information.
vrf	(Optional) Displays the virtual routing and forwarding (VRF) information.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show resource** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display resources:

```
vsg# show resource
```

```
Resource           Min           Max           Used           Unused          Avail
```

Send document comments to vsg-docfeedback@cisco.com.

```

-----
vlan                16      2049      2        14      2047

show role

To show user role information, use the **show role** command.

```
show role [feature | name role-name | pending | pending-diff | session | status]
```

Syntax Description	feature	(Optional) Displays role features.
	name	(Optional) Specifies the role name.
	<i>role-name</i>	Name of role.
	pending	(Optional) Displays uncommitted role configurations.
	pending-diff	(Optional) Displays uncommitted role configurations.
	session	(Optional) Displays role session status.
	status	(Optional) Displays role status.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show role** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to display the details of the network-admin role:

```
vsg# show role name network-admin

Role: network-admin
Description: Predefined network admin role has access to all commands
on the switch
-----
Rule      Perm      Type      Scope      Entity
-----
1         permit   read-write
vsg#
```

Related Commands

Command	Description
show users	Displays users.

Send document comments to vsg-docfeedback@cisco.com.

show running-config

To display running configurations, use the **show running-config** command.

```
show running-config [aaa | all | am | arp | cdp | cert-enroll | diff | exclude | expand-port-profile
| icmpv6 | igmp | interface | ip | l3vm | monitor | ntp | object-group group-name | policy
policy-name | rule rule-name | security | snmp | vdc-all | vlan | vshd | zone zone-name]
```

Syntax	Description
aaa	(Optional) Displays the authentication, authorization, and accounting (AAA) configuration.
all	(Optional) Displays the current operating configuration with defaults.
am	(Optional) Displays AM information.
arp	(Optional) Displays Address Resolution Protocol (ARP) information.
cdp	(Optional) Displays the Cisco Discovery Protocol (CDP) configuration.
cert-enroll	(Optional) Displays the certificates configuration.
diff	(Optional) Displays the difference between the running configuration and the startup configuration.
exclude	(Optional) Excludes displaying specified configurations when performing the show running-config command.
expand-port-profile	(Optional) Displays the port profile.
icmpv6	(Optional) Displays ICMPv6 information.
igmp	(Optional) Displays Internet Group Management Protocol (IGMP) information.
interface	(Optional) Displays interface configurations.
ip	(Optional) Displays IP information.
l3vm	(Optional) Displays Layer 3 Virtual Machine information.
monitor	(Optional) Configures Ethernet SPAN sessions.
ntp	(Optional) Displays NTP information.
object-group	(Optional) Displays the object-group configuration.
<i>group-name</i>	Object group name.
policy	(Optional) Displays the policy configuration.
<i>policy-name</i>	Policy name.
rule	(Optional) Displays the rule configuration.
<i>rule-name</i>	Rule name.
security	(Optional) Displays the security configuration.
snmp	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
vdc-all	(Optional) Displays the Virtual Device Context (VDC) configuration.
vlan	(Optional) Displays the VLAN configuration.
vshd	(Optional) Displays the running configuration for VSHD.
zone	(Optional) Displays the running configuration for zones.
<i>zone-name</i>	Zone name.

Send document comments to vsg-docfeedback@cisco.com.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show running-config** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display the running configuration:

```
vsg# show running-config

show service-path connection

To display service path connection information, use the **show service-path connection** command.

```
show service-path connection [svs-domain-id domain-id [module module-number]]
```

Syntax Description	svs-domain-id	(Optional) Specifies the SVS domain.
	<i>domain-id</i>	Domain identification number. The range is from 1 to 4095.
	module	(Optional) Specifies the module.
	<i>module-number</i>	Module number. The range is from 3 to 66.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(3)	The output of the show service-path connection was changed to show that the vlan column displays vxlan for any traffic coming from or going to the vxlan VM machine.
	4.2(1)VSG1(2)	This command was modified to show more organization and detail.
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show service-path connection** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display service path connections:

```
vsg# show service-path connection
Flags:
P - policy at src                p - policy at dst
O - conn offloaded to ser-path at src  o - conn offloaded to ser-path at dst

show service-path statistics

To display service path statistics, use the **show service-path statistics** command.

show service-path statistics [*svs-domain-id domain-id* [*module module-number*]]

Syntax Description	svs-domain-id	(Optional) Specifies the SVS domain.
	<i>domain-id</i>	Domain identification number. The range is from 1 to 4095.
	module	(Optional) Specifies the module.
	<i>module-number</i>	Module number. The range is from 3 to 66.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(3.1)	The output of the show service-path statistics command was changed to show the service path statistics.
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show service-path statistics** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display service path statistics:

```

Related Commands

Command	Description
show svcs	Displays SVS information.

Send document comments to vsg-docfeedback@cisco.com.

show snmp

To display Simple Network Management Protocol (SNMP) information, use the **show snmp** command.

```
show snmp [community | context | engineID | group | host | internal | sessions | source-interface
          | trap | user]
```

Syntax Description		
community	(Optional)	Displays SNMP community strings.
context	(Optional)	Displays SNMP context mapping entries.
engineID	(Optional)	Displays the SNMP engine ID.
group	(Optional)	Displays SNMP groups.
host	(Optional)	Displays SNMP hosts.
internal	(Optional)	Displays internal SNMP information.
sessions	(Optional)	Displays SNMP sessions.
source-interface	(Optional)	Displays the notifications source interface.
trap	(Optional)	Displays SNMP traps.
user	(Optional)	Displays SNMPv3 users.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show snmp** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

■ show snmp

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to display SNMP users:

```
vsg# show snmp user
```

```

SNMP USERS
-----
User                               Auth  Priv(enforce) Groups
-----
NOTIFICATION TARGET USERS (configured for sending V3 Inform)
-----

User                               Auth  Priv
-----
admin                               md5   des
(EngineID 128:0:0:9:3:0:0:0:0:0)

vsnbetauser                         md5   des

show sockets

To display socket information, use the **show sockets** command.

show sockets { **client** | **connection** | **internal** | **statistics** }

Syntax Description		
	client	Displays client socket information.
	connection	Displays socket connections information.
	internal	Displays internal socket information.
	statistics	Displays socket statistics.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show sockets** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display socket statistics:

```
vsg# show sockets statistics
TCP Received:
  43556 packets total
  0 checksum error, 0 bad offset, 0 too short, 0 MD5 error
  33557 packets (1428824 bytes) in sequence
  435 duplicate packets (8296 bytes)
  0 partially dup packets (0 bytes)
  141 out-of-order packets (7736 bytes)
  0 packets (0 bytes) with data after window
  1 packets after close
  0 window probe packets, 0 window update packets
  470 duplicate ack packets, 0 ack packets with unsent data
```

Send document comments to vsg-docfeedback@cisco.com.

```

    17669 ack packets (1759693 bytes)
TCP Sent:
    20950 total, 0 urgent packets
    20 control packets
    20057 data packets (1759592 bytes)
    5 data packets (736 bytes) retransmitted
    809 ack only packets
    0 window probe packets, 59 window update packets

TCP:
0 connections initiated, 129 connections accepted, 129 connections established
129 connections closed (including 107 dropped, 0 embryonic dropped)
4 total rxmt timeout, 0 connections dropped in rxmt timeout
40 keepalive timeout, 40 keepalive probe, 0 connections dropped in keepalive
vsg#

show ssh

To display secure shell (SSH) information, use the **show ssh** command.

```
show ssh {key | name | server}
```

Syntax Description	key	Displays the SSH keys.
	name	Displays the preestablished master SSH connections.
	server	Displays the status of SSH on the server.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show ssh** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the SSH keys:

```
vsg# show ssh key

Related Commands

Command	Description
show telnet	Displays the Telnet server configuration.

Send document comments to vsg-docfeedback@cisco.com.

show startup-config

To display startup configurations, use the **show startup-config** command.

```
show startup-config [aaa | am | arp | cdp | cert-enroll | exclude | expand-port-profile | icmpv6 |
igmp | interface | ip | l3vm | log | monitor | ntp | security | snmp | vdc-all | vshd]
```

Syntax	Description
aaa	(Optional) Displays the authentication, authorization, and accounting (AAA) configuration.
am	(Optional) Displays AM information.
arp	(Optional) Displays Address Resolution Protocol (ARP) information.
cdp	(Optional) Displays the Cisco Discovery Protocol (CDP) configuration.
cert-enroll	(Optional) Displays the certificates configuration.
diff	(Optional) Displays the difference between running configuration and startup configuration.
expand-port-profile	(Optional) Displays the port profile.
icmpv6	(Optional) Displays Internet Control Message Protocol Version 6 (ICMPv6) information.
igmp	(Optional) Displays Internet Group Management Protocol (IGMP) information.
interface	(Optional) Displays interface configurations.
ip	(Optional) Displays IP information.
l3vm	(Optional) Displays Layer 3 Virtual Machine information.
log	(Optional) Displays the execution log of the latest ASCII startup configuration.
monitor	(Optional) Configures Ethernet Switched Port Analyzer (SPAN) sessions.
ntp	(Optional) Displays Network Time Protocol (NTP) information.
security	(Optional) Displays the security configuration.
snmp	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
vdc-all	(Optional) Displays the Virtual Device Context (VDC) configuration.
vshd	(Optional) Displays the running configuration for VSHD.

Defaults None

Command Modes EXEC
Global configuration (config)

Supported User Roles network-admin
network-operator

Send document comments to vsg-docfeedback@cisco.com.

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines

You can use the following operators with the **show startup-config** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples

This example shows how to display the startup configuration:

```
vsg# show startup-config
Sap 106 returned failure code:0x80480002

!Command: show startup-config
!Time: Wed Feb 23 12:52:55 2011
!Startup config saved at: Tue Nov 30 19:23:55 2010

Related Commands

Command	Description
show running-config	Displays the running configuration.

Send document comments to vsg-docfeedback@cisco.com.

show system

To display system information, use the **show system** command.

```
show ssh { clis | cores | error-id | exception-info | internal | pss | redundancy | resources | standby
          | uptime }
```

Syntax Description

clis	Displays the command line interface (CLI) server.
cores	Displays the core transfer option.
error-id	Displays the system errors.
exception-info	Displays the exception log.
internal	Displays the internal system information.
pss	Displays the most recent PSS shrink status.
redundancy	Displays the redundancy status.
resources	Displays the system resources.
standby	Displays the system standby manual boot option.
uptime	Displays how long the system has been up and running.

Defaults

None

Command Modes

EXEC
Global configuration (config)

Supported User Roles

network-admin
network-operator

Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines

You can use the following operators with the **show system** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Send document comments to vsg-docfeedback@cisco.com.

Examples

This example shows how to display system resources:

```
vsg# show system resources
Load average:  1 minute: 0.22   5 minutes: 0.28   15 minutes: 0.12
Processes   :  245 total, 2 running
CPU states  :  0.0% user,   0.0% kernel,  100.0% idle
Memory usage: 1944668K total,  1041116K used,   903552K free
              71456K buffers,  398416K cache

vsg#
```

Related Commands

Command	Description
show hardware	Displays hardware information.

Send document comments to vsg-docfeedback@cisco.com.

show tech-support

To display information about technical support, use the **show tech-support** command.

```
show tech-support [adjmgr | arp | bootvar | brief | cert-enroll | cli | clis | details | dhcp | epp |
ethport | ha | icmpv6 | im | include-time | internal | ip | ipv6 | l3vm | module | npacl | ntp |
pktmgr | platform | port | port-channel | routing | snmp | sockets | sys-mgr | time-optimized
| vdc | vsd | xml]
```

Syntax	Description
adjmgr	(Optional) Displays Adjacency manager information.
arp	(Optional) Displays Address Resolution Protocol (ARP) information.
bootvar	(Optional) Displays detailed information about boot variables.
brief	(Optional) Displays a system summary.
cert-enroll	(Optional) Displays certificate information.
cli	(Optional) Displays information about the parser.
clis	(Optional) Displays information about the command line interface (CLI) server.
details	(Optional) Displays detailed information about troubleshooting.
dhcp	(Optional) Displays detailed information about Dynamic Host Configuration Protocol (DHCP).
epp	(Optional) Displays detailed information about EPP.
ethport	(Optional) Displays detailed information about the Eth port.
ha	(Optional) Displays detailed information about High Availability (HA).
icmpv6	(Optional) Displays information about ICMPv6.
im	(Optional) Displays detailed information about IM.
include-time	(Optional) Displays the time it took to gather technical support information.
internal	(Optional) Displays internal troubleshooting information.
ip	(Optional) Displays IP information.
ipv6	(Optional) Displays IPv6 information.
l3vm	(Optional) Display virtual routing and forwarding (VRF) information.
module	(Optional) Displays information about modules.
npacl	(Optional) Displays information about NPACL.
ntp	(Optional) Displays information about Network Time Protocol (NTP).
pktmgr	(Optional) Displays packet manager information.
platform	(Optional) Displays platform information.
port	(Optional) Displays port manager information.
port-channel	(Optional) Displays port channel information.
routing	(Optional) Displays information about routing.
snmp	(Optional) Displays information about Simple Network Management Protocol (SNMP).
sockets	(Optional) Displays information about sockets.
sys-mgr	(Optional) Displays information about system manager.
time-optimized	(Optional) Gather tech-support faster, requires more memory and disk space.

Send document comments to vsg-docfeedback@cisco.com.

vdc	(Optional) Displays information about Virtual Device Context (VDC).
vsd	(Optional) Displays information about VSD.
xml	(Optional) Displays information about XML.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show tech-support** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a show command that displays a long list of data, you can press **Ctrl+c** at any time to exit that list.

Examples This example shows how to display HA information:

```

Related Commands

Command	Description
show debug	Displays debug flags.

Send document comments to vsg-docfeedback@cisco.com.

show telnet server

To display the status of Telnet services, use the **show telnet** command.

show telnet server

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show telnet server** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the status of Telnet services:

```
vsg# show telnet server
telnet service not enabled
vsg#
```

Related Commands	Command	Description
	show http	Displays the status of HTTP services.

Send document comments to vsg-docfeedback@cisco.com.

show terminal

To display information about the terminal, use the **show terminal** command.

show terminal [internal]

Syntax Description	internal (Optional) Displays internal terminal information.				
Defaults	None				
Command Modes	EXEC Global configuration (config)				
SupportedUserRoles	network-admin network-operator				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>4.2(1)VSG1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	4.2(1)VSG1(1)	This command was introduced.
Release	Modification				
4.2(1)VSG1(1)	This command was introduced.				

Usage Guidelines You can use the following operators with the **show terminal** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display information about the terminal:

```
VSG129-2# show terminal internal info

show user-account

To display information about user accounts, use the **show user-account** command.

```
show user-account [user-account-name]
```

Syntax Description	
	<i>user-account-name</i> (Optional) User account name.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
	You can use the following operators with the show user-account command: <ul style="list-style-type: none"> • >—Redirects the output to a file. • >>—Redirects the output to a file in append mode. • —Pipes the command output to a filter.

Examples	
	This example shows how to display user accounts: <pre>vsg# show user-account user:adminbackup this user account has no expiry date roles: user:admin this user account has no expiry date roles:network-admin user:vsnbetauser this user account has no expiry date roles:network-admin vsg#</pre>

Related Commands	Command	Description
	show users	Displays current users.

Send document comments to vsg-docfeedback@cisco.com.

show users

To display users, use the **show users** command.

show users

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show users** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display users:

```
vsg# show users
NAME      LINE      TIME          IDLE          PID COMMENT
admin     pts/0     Jan 21 17:19  old          3021 (171.69.17.61) session=ssh

vsg#
```

Related Commands	Command	Description
	show user-account	Displays information about user accounts.

Send document comments to vsg-docfeedback@cisco.com.

show version

To display the software version, use the **show version** command.

```
show version [build-info | image | internal]
```

Syntax Description	build-info	(Optional) Displays software build information.
	image	(Optional) Displays software image information.
	internal	(Optional) Displays software compatibility results between two images.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show version** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display software build information:

```
vsg# show version build-info
```

Related Commands	Command	Description
	show install	Displays the software install impact between two images.

Send document comments to vsg-docfeedback@cisco.com.

show vnm-pa

To display the Virtual Network Management Center (VNMC) policy agent, use the **show vnm-pa** command.

show vnm-pa [**status** | **tech-support**]

Syntax Description	
status	(Optional) Displays the policy agent status.
tech-support	(Optional) Displays technical support information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vnm-pa** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display the policy agent status:

```
vsg# show vnm-pa status
VNM Policy-Agent status is - Not Installed
vsg#
```

Related Commands	Command	Description
	show vsg	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

show vsg dvport

To display information about a Cisco VSG DV port, use the **show vsg dvport** command.

```
show vsg [dvport [port-name]]
```

Syntax Description	
	<i>port-name</i> (Optional) DV port name.

Defaults	
	None

Command Modes	
	EXEC Global configuration (config)

SupportedUserRoles	
	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	
	You can use the following operators with the show vsg dvport command: <ul style="list-style-type: none"> • >—Redirects the output to a file. • >>—Redirects the output to a file in append mode. • —Pipes the command output to a filter.

Examples	
	This example shows how to display information about a DV port:

```
vsg# show vsg dvport
DV Port      : 576::bcaa1c50-8747-8d08-fe7e-a9aa8924bf8e
Security Profile : spcustom
VM uuid      : 421c5ae4-51c3-5dd9-60fa-a50cb04ed0ea
Port Profile  : vm_data
IP Addresses :
  100.1.1.20
  100.1.1.10
vsg#
```

Related Commands	Command	Description
	show vsg ip-binding	Displays information about IP bindings.

Send document comments to vsg-docfeedback@cisco.com.

show vsg ip-binding

To display a list of virtual machine (VM) IP addresses and associated VNSP and policy sets, use the **show vsg ip-binding** command.

show vsg ip-binding

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsg ip-binding** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display a list of VM IP addresses:

```
vsg# show vsg ip-binding
```

```
-----
      VM IP address           Security-Profile Name           Policy Name
-----
 100.1.1.20                 spcustom                       policy_one
 100.1.1.10                 sp_new                         policy_one
vsg#
```

Related Commands	Command	Description
	show vsg security-profile	Displays information about security profiles.

Send document comments to vsg-docfeedback@cisco.com.

show vsg security-profile

To display information about security profiles, use the **show vsg security-profile** command.

show vsg security-profile [*vnspp-name* | **detail** | **table**]

Syntax Description		
	<i>vnspp-name</i>	(Optional) Virtual network security profile (VNSP) name.
	detail	(Optional) Displays more details about the VSG security profile.
	table	(Optional) Displays security profile information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsg security-profile** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

The detail version of the **show vsg security-profile** command includes the names of the virtual machines that are using the security-profile in addition to security-profile information. A VNSP name can be specified to get details of a specific security-profile.

Examples This example shows how to display detailed information about the security profile sp_deny@root:

```
vsg# show vsg security-profile sp_deny@root detail
VNSP          : sp_deny@root
VNSP id       : 5
Policy Name   : ps_deny@root
Policy id     : 3
Custom attributes :
  Name        : vnspporg
  Value       : root
  Name        : profile1
  Value       : eng
```

Send document comments to vsg-docfeedback@cisco.com.

```
Virtual Machines:  
sg-pg-vm206  
sg-pg-redhat
```

```
vsg#
```

Related Commands

Command	Description
show policy stats	Displays policy statistics.

Send document comments to vsg-docfeedback@cisco.com.

show vsg vm

To display information about a virtual machine (VM), use the **show vsg vm** command.

show vsg vm

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was modified. Optional parameter <i>vm-uuid</i> was removed. New version of command does not accept any parameter and always displays information for all the virtual machines.
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsg vm** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display information for the VSG VM:

```
vsn22# show vsg vm
VM uuid      : 421c5ae4-51c3-5dd9-60fa-a50cb04ed0ea
VM attributes :
  cluster-name      :
  host-name         : 10.193.73.154
  name              : win2k3

vsg#
```

Send document comments to vsg-docfeedback@cisco.com.

Related Commands

Command	Description
show vsg	Displays Cisco VSG information.

■ show vsg vm name

Send document comments to vsg-docfeedback@cisco.com.

show vsg vm name

To display the name information about a virtual machine (VM), use the **show vsg vm name** command.

show vsg vm name *name*

Syntax Description	<i>name</i>
	Name or partial name of a virtual machine in your Cisco VSG network.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines You can use the following operators with the **show vsg vm name** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

This command displays information for one or more virtual machines. The virtual machine name should be specified as a parameter and can be a prefix (first few characters) or the entire name. The information for the VM includes details of each DV port used by the VM and zones that the VM belongs to.

Examples This example shows how to display information for the VSG VM with name linux-204:

```
vsg# show vsg vm name linux-204
VM uuid          : 421ceac2-3b3f-67f9-b71c-3755d2c8cabe
VM attributes :
  cluster-name   : cluster23
  host-name      : 10.193.77.204
  name           : linux-204-184
  os-fullname    : red hat enterprise linux 4 (32-bit)
  os-hostname    :
  res-pool       : resources
  tools-status   : not-installed
  vapp-name      :
DV Port(s) :
  DV Port       : 272::1c7b1c50-f1b7-9a71-259d-820f4713a4b1
```

Send document comments to vsg-docfeedback@cisco.com.

```

Security Profile           : SP-DC1@root/Cisco-Tenant1
Port Profile              : profile_App2
IP Addresses :
  20.100.201.184
DV Port                   : 240::1c7b1c50-f1b7-9a71-259d-820f4713a4b1
Security Profile         : SP-App1@root/Cisco-Tenant1
Port Profile              : profile_App1

vsg#

```

Related Commands

Command	Description
<code>show vsg</code>	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

show vsg vm uuid

To display the Cisco VSG virtual machine UUID, use the **show vsg vm uuid** command.

```
show vsg vm uuid uuid
```

Syntax Description	<i>uuid</i>	Designates the name of the UUID.
--------------------	-------------	----------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Usage Guidelines	This command requires the VM UUID as a parameter. Information for the specified VM is displayed.
------------------	--

Examples This example shows how to display the Cisco VSG UUID information:

```
vsg# show vsg vm uuid 421cefd6-29d1-4c8e-e563-2c3a4d58cd31
VM uuid          : 421cefd6-29d1-4c8e-e563-2c3a4d58cd31
VM attributes :
  cluster-name      :
  host-name         : 10.193.77.206
  name              : linux-206-185
  os-fullname       : red hat enterprise linux 4 (32-bit)
  os-hostname       :
  resource-pool     : resource-pool1
  tools-status      : not-installed
  vapp-name         :
  Zone(s)           :
```

Related Commands	Command	Description
	show vsg	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

show vsg zone

To display the Cisco VSG zones, use the **show vsg zone** command.

```
show vsg zone
```

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC Global configuration (config)
----------------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

Examples This example shows how to display Cisco VSG zones:

```
vsg(config-vnm-policy-agent)# show vsg zone
Zone : centos5.3_2_VEM2@root/tenant_d3337/dc1
Virtual Machines :
  centos5.3_2_vem2
-----
Zone : tenant_3337_zonename1@root/tenant_d3337
Virtual Machines :
-----
Zone : deletetest@root/tenant_d3337
Virtual Machines :
  centos5.3_1
  centos5.3_vlan100
  centos5.3_2_vem2
  centos5.3_2_vem1
  win2003entr2-32_vlan150_100_split
  centos5.2
  centos5.3_1_vem2
  centos5.3_3_vem1_clone
  centos5.3_3_vem2_clone
```

Related Commands	Command	Description
	show vsg	Displays Cisco VSG information.

Send document comments to vsg-docfeedback@cisco.com.

show xml server

To display XML server information, use the **show xml server** command.

show xml server [**logging** | **status**]

Syntax Description	logging	(Optional) Displays the logging configuration and the contents of the log file.
	status	(Optional) Displays XML agent information.

Defaults None

Command Modes EXEC
Global configuration (config)

SupportedUserRoles network-admin
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines You can use the following operators with the **show xml server** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

Examples This example shows how to display XML server information:

```
vsg# show xml server status
operational status is enabled
maximum session configured is 8
vsg#
```

Related Commands	Command	Description
	show http-server	Displays the HTTP server configuration.
