

## Cisco Virtual Security Gateway Show Commands

---

This chapter provides information about Cisco Virtual Security Gateway (VSG) **show** commands.

---

 show aaa

## show aaa

To display information about authentication, authorization, and accounting (AAA), use the **show aaa** command.

**show aaa [accounting | authentication | authorization | groups | users]**

Syntax Description	accounting      (Optional) Displays the accounting configuration. authentication    (Optional) Displays the authentication configuration. authorization    (Optional) Displays the authorization configuration. groups            (Optional) Displays configured groups. users             (Optional) Displays remotely authenticated users.
--------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the <b>show aaa</b> command: <ul style="list-style-type: none"><li>• &gt;—Redirects the output to a file.</li><li>• &gt;&gt;—Redirects the output to a file in append mode.</li><li>•  —Pipes the command output to a filter.</li></ul>
------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Examples	This example shows how to display the AAA configuration:
----------	----------------------------------------------------------

```
vsg# show aaa authentication
      default: local
      console: local
```

Related Commands	Command	Description
	<b>password</b>	Configures the password.

# show ac-driver

To display application container statistics, use the **show ac-driver** command.

## show ac-driver statistics

<b>Syntax Description</b>	<b>statistics</b>	Displays application container statistics.
<b>Defaults</b>	None	
<b>Command Modes</b>	EXEC Global configuration (config)	
<b>Supported User Roles</b>	network-admin network-operator	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(3.1)	The output of the <b>show ac-driver</b> command was changed to show the new application container statistics.
	4.2(1)VSG1(1)	This command was introduced.
<b>Usage Guidelines</b>	You can use the following operators with the <b>show ac-driver</b> command:	
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>	
<b>Examples</b>	This example shows how to display application container statistics:	
	<pre>vsg# show ac-driver statistics #Packet Statistics: Rcvd Total          5510 Buffers in Use      3188   Rcvd vPath L2 Pkts 1140 Rcvd vPath IPV4 Pkts 0   Rcvd VPath Pkts   1140 Sent to VPath       1140   Sent to Service-Path 1140 Sent to Control-Path 4370   All Drops          0   Non-vPath LLC     0 Non-vPath OUI        0   Non-vPath type L2 0   Non-vPath IPV4    0 Non-vPath IPV4 UDP     0   Service-Path not Initiated 0 Service-Path Down 0   Rcvd Bad Descriptor 0 Send to Service-Path Err 0   Packet Offset Err 0 Send Bad Descriptor 0   Send NIC Err      0</pre>	

■ **show ac-driver**

Related Commands	Command	Description
	<b>show vsg</b>	Displays information about a Cisco VSG.

# show accounting

To display the accounting log, use the **show accounting** command.

**show accounting log [start-time year month day time end-time year month day time]**

Syntax Description	<b>log</b> Displays the accounting log. <b>start-time</b> (Optional) Displays the date in the log the display will start. <i>year month day time</i> (Optional) Year, day and time. The range for <i>year</i> is from 1970 to 2030, and is in YYYY format. The values for <i>month</i> are <b>Jan</b> , <b>Feb</b> , <b>Mar</b> , <b>Apr</b> , <b>May</b> , <b>Jun</b> , <b>Jul</b> , <b>Aug</b> , <b>Sep</b> , <b>Oct</b> , <b>Nov</b> , or <b>Dec</b> . The range for <i>day</i> is from 1 to 31, and is in dd format. <i>time</i> is in HH:MM:SS. <b>end-time</b> (Optional) Displays the date in the log the display will end.
--------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Defaults</b>	None
<b>Command Modes</b>	EXEC Global configuration (config)
<b>Supported User Roles</b>	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show accounting</b> command: <ul style="list-style-type: none"> <li>• <b>&gt;</b>—Redirects the output to a file.</li> <li>• <b>&gt;&gt;</b>—Redirects the output to a file in append mode.</li> <li>• <b> </b>—Pipes the command output to a filter.</li> </ul> When you execute a <b>show</b> command that displays a long list of data, you can press <b>Ctrl-C</b> at any time to exit that list.
-------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Examples</b>	This example shows how to display the accounting log:
	<pre>vsg# show accounting log Fri Jan 21 17:19:35 2011:update:171.69.17.61@pts/0:admin:dir (SUCCESS) Fri Jan 21 17:23:36 2011:update:10.193.73.130@ssh.3115:vsnbetauser:test vmsp sp1 1 (SUCCESS) Fri Jan 21 17:24:04 2011:update:10.193.73.130@ssh.3120:vsnbetauser:test vmsp sp1 1 (SUCCESS)</pre>

**■ show accounting**

```

Related Commands	Command	Description
	<b>show logging</b>	Displays the logging configuration and the contents of the log file.

# show banner

To display the banner, use the **show banner** command.

**show banner motd**

<b>Syntax Description</b>	<b>motd</b>	Displays the message of the day.
<b>Defaults</b>	None	
<b>Command Modes</b>	EXEC Global configuration (config)	
<b>Supported User Roles</b>	network-admin network-operator	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.
<b>Usage Guidelines</b>	You can use the following operators with the <b>show banner</b> command:	
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>	
<b>Examples</b>	This example shows how to display the banner:	
	<pre>vsg# show banner motd Nexus 1000V VSG</pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>banner</b>	Creates a banner message.

**show boot**

# show boot

To display boot variables, use the **show boot** command.

```
show boot [auto-copy | module | sup-1 | sup-2 | variables]
```

**Syntax Description**

<b>auto-copy</b>	(Optional) Displays whether auto copy is enabled or disabled.
<b>module</b>	(Optional) Displays the boot variables for a specific module or all modules.
<b>sup-1</b>	(Optional) Displays the current and next load boot variables for supervisor 1.
<b>sup-2</b>	(Optional) Displays the current and next load boot variables for supervisor 2.
<b>variables</b>	(Optional) Displays a list of boot variables.

**Defaults**

None

**Command Modes**

EXEC

Global configuration (config)

**SupportedUserRoles**

network-admin  
network-operator

**Command History**

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines**

You can use the following operators with the **show boot** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples**

This example shows how to display boot variables:

```
vsg# show boot
Current Boot Variables:

sup-1
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
sup-2
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
No module boot variable set
```

Boot Variables on next reload:

```
sup-1
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
sup-2
kickstart variable = bootflash:/ks.bin
system variable = bootflash:/sys.bin
No module boot variable set
```

---

**Related Commands****Command****Description**

<b>boot</b>	Creates boot variables.
-------------	-------------------------

**show cdp**

# show cdp

To display Cisco Discovery Protocol (CDP) information, use the **show cdp** command.

```
show cdp {all | entry | global | interface | internal | neighbors | traffic}
```

## Syntax Description

<b>all</b>	Displays all interfaces in the CDP database.
<b>entry</b>	Displays CDP entries in the CDP database.
<b>global</b>	Displays global CDP information.
<b>interface</b>	Displays CDP information for an interface.
<b>internal</b>	Displays private memory statistics for the UUID.
<b>neighbors</b>	Displays CDP neighbors.
<b>traffic</b>	Displays CDP traffic statistics.

## Defaults

None

## Command Modes

EXEC

Global configuration (config)

## SupportedUserRoles

network-admin  
network-operator

## Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show cdp** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a show command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

## Examples

This example shows how to display all interfaces in the CDP database:

```
vsg# show cdp all
Interface Index :83886080
Interface mgmt0:
    Operational status: up
    Config status: enabled
```

```
Refresh time: 60
Hold time: 180
```

```
Interface Index :117440512
Interface data0:
    Operational status: up
    Config status: enabled
    Refresh time: 60
    Hold time: 180
```

Related Commands	Command	Description
	<b>cdp</b>	Configures CDP parameters.

**show cli**

## show cli

To display command-line interface (CLI) information, use the **show cli** command.

```
show cli {alias | dynamic | history | interface | internal | list | syntax | variables}
```

### Syntax Description

<b>alias</b>	Displays the CLI alias.
<b>dynamic</b>	Display the current range of dynamic parameters.
<b>history</b>	Displays the CLI command history.
<b>interface</b>	Displays the CLI interface table.
<b>internal</b>	Displays the CLI statistics.
<b>list</b>	Displays the CLI command syntax.
<b>syntax</b>	Displays the Extended Backus–Naur Form (EBNF) syntax of all commands.
<b>variables</b>	Displays the CLI variables.

### Defaults

None

### Command Modes

EXEC

Global configuration (config)

### SupportedUserRoles

network-admin  
network-operator

### Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

### Usage Guidelines

You can use the following operators with the **show cli** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

### Examples

This example shows how to display CLI variables:

```
vsg# show cli variables
VSH Variable List
-----
```

```
SWITCHNAME="vsg"
TIMESTAMP="2011-02-14-17.33.37"
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>cli var</b>	Defines CLI variables.

**show clock**

# show clock

To display the clock, use the **show clock** command.

**show clock [detail]**

<b>Syntax Description</b>	<b>detail</b>	(Optional) Displays the day, the time, and the year.
---------------------------	---------------	------------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show clock</b> command: <ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>
-------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Examples</b>	This example shows how to display the clock:
-----------------	----------------------------------------------

```
vsg# show clock detail
Mon Feb 14 17:47:44 UTC 2011
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>clock</b>	Manages the system clock.

# show copyright

To display copyright information, use the **show copyright** command.

## show copyright

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show copyright** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display copyright information:

```
vsg# show copyright
Cisco Nexus Operating System (NX-OS) Software
TAC support: http://www.cisco.com/tac
Copyright (c) 2002-2011, Cisco Systems, Inc. All rights reserved.
The copyrights to certain works contained in this software are
owned by other third parties and used and distributed under
license. Certain components of this software are licensed under
the GNU General Public License (GPL) version 2.0 or the GNU
Lesser General Public License (LGPL) Version 2.1. A copy of each
such license is available at
http://www.opensource.org/licenses/gpl-2.0.php and
http://www.opensource.org/licenses/lgpl-2.1.php
```

**Related Commands**

■ show copyright

Command	Description
<b>show version</b>	Displays build information.
<b>build-info</b>	

# show cores

To display all core dumps, use the **show cores** command.

## show cores

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show cores** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

**Examples** This example shows how to display all core dumps:

```
vsg# show cores
```

Related Commands	Command	Description
	<b>show event-log</b>	Displays the event log.

**■ show debug**

# show debug

To show debug flags, use the **show debug** command.

```
show debug [aaa | arp | ascii-cfg | bootvar | capability | cdp | cert-enroll | clis | core | ethpm |
evmc | fm | fs-daemon | igmp | im | ip | ipconf | ipv6 | kadb | klm-rwsem | logfile | module |
monitor | msp | mvsh | ntp | platform | plugin | port-channel | redundancy | res_mgr |
scheduler | security | snmp | system | tcap | ttyd | vdc | vlan | nsc | nsc-pa | vsh | vshd | xml]
```

Syntax Description	
<b>aaa</b>	(Optional) Displays AAA debugging flags.
<b>arp</b>	(Optional) Displays ARP debugging flags.
<b>ascii-cfg</b>	(Optional) Displays ASCII-CFG debugging flags.
<b>bootvar</b>	(Optional) Displays boot variables debugging flags.
<b>capability</b>	(Optional) Displays capability debugging flags.
<b>cdp</b>	(Optional) Displays CDP debugging flags.
<b>cert-enroll</b>	(Optional) Displays certificate enrollment debugging flags.
<b>clis</b>	(Optional) Displays CLI debugging flags.
<b>core</b>	(Optional) Displays core daemon debugging flags.
<b>ethpm</b>	(Optional) Displays ETPM debugging flags.
<b>evmc</b>	(Optional) Displays EVMC debugging flags.
<b>fm</b>	(Optional) Displays feature manager debugging flags.
<b>fs-daemon</b>	(Optional) Displays FS daemon debugging flags.
<b>igmp</b>	(Optional) Displays PIM debugging flags.
<b>im</b>	(Optional) Displays IM debugging flags.
<b>ip</b>	(Optional) Displays IP information.
<b>ipconf</b>	(Optional) Displays IPCONF debugging flags.
<b>ipv6</b>	(Optional) Displays IPv6 information.
<b>kadb</b>	(Optional) Displays kernel ADB debugging flags.
<b>klm-rwsem</b>	(Optional) Displays RWSEM driver debugging flags.
<b>logfile</b>	(Optional) Displays the log file.
<b>module</b>	(Optional) Displays module debugging flags.
<b>monitor</b>	(Optional) Displays Ethernet Span debugging flags.
<b>msp</b>	(Optional) Displays MSP debugging flags.
<b>mvsh</b>	(Optional) Displays MVSH debugging flags.
<b>ntp</b>	(Optional) Displays NTP debugging flags.
<b>platform</b>	(Optional) Displays platform manager debugging flags.
<b>plugin</b>	(Optional) Displays plugin debugging flags.
<b>port-channel</b>	(Optional) Displays port-channel debugging flags.
<b>redundancy</b>	(Optional) Displays redundancy driver debugging flags.
<b>res_mgr</b>	(Optional) Displays resource manager debugging flags.
<b>scheduler</b>	(Optional) Displays scheduler debugging flags.
<b>security</b>	(Optional) Displays security debugging flags.

<b>snmp</b>	(Optional) Displays SNMP server debugging flags.
<b>system</b>	(Optional) Displays system debugging flags.
<b>tcap</b>	(Optional) Displays exception logger debugging flags.
<b>ttyd</b>	(Optional) Displays TTYD debugging flags.
<b>vdc</b>	(Optional) Displays VDC manager debugging flags.
<b>vlan</b>	(Optional) Displays VLAN manager debugging flags.
<b>nsc</b>	(Optional) Displays NSC debugging flags.
<b>nsc-pa</b>	(Optional) Displays NSC PA debugging flags.
<b>vsh</b>	(Optional) Displays VSH debugging flags.
<b>vshd</b>	(Optional) Displays VSHD debugging flags.
<b>xml</b>	(Optional) Displays XML debugging flags.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show debug** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

**Examples** This example shows how to display AAA debug flags:  
vsg# show debug aaa

Related Commands	Command	Description
	<b>show debug-filter</b>	Displays debugging filters.

**■ show debug-filter**

# show debug-filter

To display debug filters, use the **show debug-filter** command.

```
show debug-filter {all | arp | igmp | ip | ipv6}
```

**Syntax Description**

<b>all</b>	Displays all debugs filters.
<b>arp</b>	Displays Address Resolution Protocol (ARP) debug filters.
<b>igmp</b>	Displays Internet Group Management Protocol (IGMP) debug filters.
<b>ip</b>	Displays IP information.
<b>ipv6</b>	Displays IPv6 information.

**Defaults**

None

**Command Modes**

EXEC

Global configuration (config)

**SupportedUserRoles**

network-admin  
network-operator

**Command History**

<b>Release</b>	<b>Modification</b>
4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines**

You can use the following operators with the **show debug-filter** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you execute a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

**Examples**

This example shows how to display debug filters:

```
vsg# show debug-filter all
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show debug</b>	Displays debugging flags.

# show environment

To display information about the system environment, use the **show environment** command.

**show environment [clock | fan | power | temperature]**

<b>Syntax Description</b>	<b>clock</b> (Optional) Displays clock information. <b>fan</b> (Optional) Displays fan information. <b>power</b> (Optional) Displays power capacity and power distribution information. <b>temperature</b> (Optional) Displays temperature sensor information.
---------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show environment</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

<b>Examples</b>	This example shows how to display information about the system fan:
	<pre>vsg# show environment fan Fan: ----- Fan           Model          Hw      Status ----- ChassisFan1          0.0       Ok ChassisFan2          0.0     None Fan Air Filter : NotSupported</pre>

■ show environment

# show event manager internal

To display event manager events, use the **show event manager internal** command.

**show event manager internal [evmc | mvsh | errors]**

<b>Syntax Description</b>	<b>evmc</b> (Optional) Displays event manager events. <b>mvsh</b> (Optional) Displays memory allocation statistics. <b>errors</b> (Optional) Displays the error log.
---------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show event manager</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

When you execute a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

<b>Examples</b>	This example shows how to display event manager errors:
-----------------	---------------------------------------------------------

```
vsg# show event manager internal errors
1) Event:E_DEBUG, length:253, at 232142 usecs after Wed Feb 16 15:20:07 2011
   [100] fu_sdb_handle_update: validation fail,
         fu_is_state_active = 1,
         fu_is_sync_pss_to_standby_enabled = 0,
         mts_sync_event_get(mts_msg) = 0,
         create_del) = 0

2) Event:E_DEBUG, length:43, at 232138 usecs after Wed Feb 16 15:20:07 2011
   [100] fu_sdb_handle_update: validation fail
```

**■ show event manager internal**

- 3) Event:E\_DEBUG, length:55, at 232136 usecs after Wed Feb 16 15:20:07 2011

# show feature

To display system features, use the **show feature** command.

## show feature

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show feature** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display system features:

```
vsg# show feature
Feature Name      Instance  State
-----
dhcp-snooping     1         disabled
http-server       1         enabled
lacp              1         disabled
netflow            1         disabled
port-profile-roles 1         disabled
private-vlan       1         disabled
sshServer          1         enabled
tacacs             1         enabled
telnetServer       1         enabled
```

**Related Commands**

# show interface

To display information about interfaces, use the **show interface** command.

```
show interface [brief | capabilities | counters | data | description | ethernet | loopback |
    mac-address | mgmt | port-channel | snmp-ifindex | status | switchport | transceiver | trunk]
```

Syntax Description	<b>brief</b> (Optional) Displays brief information about an interface.
<b>capabilities</b>	(Optional) Displays information about interface capabilities.
<b>counters</b>	(Optional) Displays interface counters.
<b>data</b>	(Optional) Displays the data interface.
<b>description</b>	(Optional) Displays a description of an interface.
<b>ethernet</b>	(Optional) Displays Ethernet IEEE 802.3z interfaces.
<b>loopback</b>	(Optional) Displays the loopback interface.
<b>mac-address</b>	(Optional) Displays the MAC address of an interface.
<b>mgmt</b>	(Optional) Displays the management interface.
<b>port-channel</b>	(Optional) Displays port-channel interfaces.
<b>snmp-ifindex</b>	(Optional) Displays the Simple Network Management Protocol (SNMP) interface index.
<b>status</b>	(Optional) Displays the interface line status.
<b>switchport</b>	(Optional) Displays the switchport interface.
<b>transceiver</b>	(Optional) Displays interface transceiver information.
<b>trunk</b>	(Optional) Displays trunk interface information.

<b>Defaults</b>	None
<b>Command Modes</b>	EXEC Global configuration (config)
<b>Supported User Roles</b>	network-admin network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show interface** command:

- >—Redirects the output to a file.

**■ show interface**

- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples**

This example shows how to display information about the management 0 interface:

```
vsg# show interface mgmt 0
mgmt0 is up
    Hardware: Ethernet, address: 0050.56bb.0038 (bia 0050.56bb.0038)
    Internet Address is 10.193.73.138/21
    MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,
        reliability 255/255, txload 1/255, rxload 1/255
    Encapsulation ARPA
    full-duplex, 10 Gb/s
    Auto-Negotiation is turned on
    1 minute input rate 44136 bits/sec, 62 packets/sec
    1 minute output rate 1808 bits/sec, 1 packets/sec
    Rx
        755797571 input packets 131701 unicast packets 2575417 multicast packets
        753090453 broadcast packets 107614075553 bytes
    Tx
        1240518 output packets 1144680 unicast packets 43411 multicast packets
        52427 broadcast packets 203763544 bytes
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show ip interface</b>	Displays IP interface information.

# show ip

To display IP statistics, use the **show ip** command.

```
show ip {adjacency | arp | client | igmp | interface | internal | logging | netstack | process | route
         | static-route | tftp | traffic}
```

Syntax Description	
<b>adjacency</b>	Displays the IP adjacency table.
<b>arp</b>	Displays IP Address Resolution Protocol (ARP) table and statistics.
<b>client</b>	Displays clients registered with the IP process.
<b>igmp</b>	Display the IP address Internet Group Management Protocol (IGMP) status and configuration.
<b>interface</b>	Displays IP interface information.
<b>internal</b>	Displays internal IP information.
<b>logging</b>	Displays the IP policy logging table.
<b>netstack</b>	Displays the netstack local cache.
<b>process</b>	Displays global IP information.
<b>route</b>	Displays routing information.
<b>static-route</b>	Displays configured static routes.
<b>tftp</b>	Displays Trivial File Transfer Protocol (TFTP) client information.
<b>traffic</b>	Displays IP software processed traffic statistics.

  

Defaults	None
Command Modes	EXEC Global configuration (config)
Supported User Roles	network-admin network-operator

  

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show ip** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**show ip****Examples**

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show ipv6</b>	Displays IPv6 information.

# show ipv6

To display IPv6 statistics, use the **show ipv6** command.

```
show ipv6 {adjacency | icmp | mld | nd | neighbor | route | routers}
```

Syntax Description	<b>adjacency</b> Displays the IPv6 adjacency table.
<b>icmp</b>	Displays ICMPv6 information.
<b>mld</b>	Displays Multicast Listener Discovery information.
<b>nd</b>	Displays Neighbor Discovery interface information.
<b>neighbor</b>	Displays IPv6 neighbor information.
<b>route</b>	Displays the IPv6 routing table.
<b>routers</b>	Displays neighbor routing information.

Defaults	None
----------	------

Command Modes	EXEC Global configuration (config)
---------------	---------------------------------------

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the <b>show ipv6</b> command: <ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>
------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Examples	This example shows how to display an IPv6 adjacency table:
	<pre>vsg# show ipv6 adjacency summary IPv6 AM Table - Adjacency Summary  Static   : 2 Dynamic : 03 Others   : 0 Total    : 5</pre>

**■ show ipv6**

Related Commands	Command	Description
	<b>show ip</b>	Displays IP information.

# show kernel internal

To display kernel information, use the **show kernel** command.

```
show kernel internal {aipc | cphogmon | ide-statistics | malloc-stats | meminfo | messages |
    skb-stats | softnetstat}
```

## Syntax Description

<b>aipc</b>	Displays kernel AIPC information.
<b>cphogmon</b>	Displays CPU hog monitoring.
<b>ide-statistics</b>	Displays IDE statistics
<b>malloc-stats</b>	Displays malloc statistics.
<b>meminfo</b>	Displays kernel memory usage information.
<b>messages</b>	Displays kernel messages.
<b>skb-stats</b>	Displays SK buffer allocation statistics.
<b>softnetstat</b>	Displays kernel network queue information.

## Defaults

None

## Command Modes

EXEC

Global configuration (config)

## SupportedUserRoles

network-operator

## Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show kernel internal** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

## Examples

This example shows how to display information about memory:

```
vsg# show kernel internal meminfo
MemTotal:      1944668 kB
MemFree:       909024 kB
Buffers:        70880 kB
Cached:        397144 kB
```

**■ show kernel internal**

```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show event-log</b>	Displays the event log.

■ **show ntp**

## show ntp

To display Network Time Protocol (NTP) information, use the **show ntp** command.

**show ntp [internal | peer-status | peers | rts-update | source | statistics | timestamp-status]**

---

### Syntax Description

<b>internal</b>	(Optional) Displays internal NTP information.
<b>peer-status</b>	(Optional) Displays the status of all the peers.
<b>peers</b>	(Optional) Displays all the peers.
<b>rts-update</b>	(Optional) Displays the status of RTS.
<b>source</b>	(Optional) Displays the source IP address.
<b>statistics</b>	(Optional) Displays NTP statistics.
<b>timestamp-status</b>	(Optional) Displays the status of the time-stamp check.

---

### Defaults

None

---

### Command Modes

EXEC

Global configuration (config)

---

### SupportedUserRoles

network-admin  
network-operator

---

### Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

---

### Usage Guidelines

You can use the following operators with the **show ntp** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

---

### Examples

This example shows how to display local NTP statistics:

```
VSG129-2# show ntp statistics local
system uptime:          2669747
time since reset:       2669747
old version packets:    0
new version packets:    10
unknown version number: 0
bad packet format:      0
packets processed:       0
```

```
bad authentication:      0
```

**Related Commands**

Command	Description
<b>show clock</b>	Displays the time.

**show password**

# show password

To enable the password strength check, use the **show password** command.

**show password strength-check**

<b>Syntax Description</b>	<b>strength-check</b>	Displays the strength of the password.
---------------------------	-----------------------	----------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show password</b> command: <ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>
-------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Examples</b>	This example shows how to enable password strength check:
	<pre>vsg# show password strength-check Password strength check enabled vsg#</pre>

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show aaa</b>	Display authentication and authorization information.

# show platform internal

To display platform manager information, use the **show platform internal** command.

```
show platform {all | errors | event-history | info | mem-stats | msgs}
```

<b>Syntax Description</b>	
<b>all</b>	Displays platform information.
<b>errors</b>	Displays the platform manager error log.
<b>event-history</b>	Displays platform manager event history.
<b>info</b>	Displays platform manager internal information.
<b>mem-stats</b>	Displays platform manager memory allocation statistics.
<b>msgs</b>	Displays platform manager message logs.

<b>Defaults</b>	None
<b>Command Modes</b>	EXEC Global configuration (config)
<b>Supported User Roles</b>	network-admin network-operator

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show platform</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

When you enter a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

<b>Examples</b>	This example shows how to display platform manager memory statistics:
	<pre>VSG129-2# show platform internal mem-stats Inside pfm_cli_show_memstats sending mts msg 18  Private Mem stats for UUID : Malloc track Library(103) Max types: 5 -----</pre>

**■ show platform internal**

**Command History**

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines**

You can use the following operators with the **show processes** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

**Examples**

This example shows how to display information about memory processes:

```
vsg(config)# show processes memory

PID      MemAlloc   MemLimit     MemUsed      StackBase/Ptr       Process
-----  -----  -----  -----  -----
  1        147456    0          1441792  bfffffe60/bfffff950  init
  2            0    0            0          0/0                ksoftirqd/0
  3            0    0            0          0/0                desched/0
  4            0    0            0          0/0                events/0
```

**Examples** This example shows how to display redundancy status:

```
vsg# show redundancy status
Redundancy role
-----
      administrative:  standalone
      operational:    standalone

Redundancy mode
-----
      administrative:  HA
      operational:     None

This supervisor (sup-1)
-----
      Redundancy state: Active
      Supervisor state: Active
      Internal state:   Active with no standby
```

```
Other supervisor (sup-2)
-----
Redundancy state: Not present

Supervisor state: N/A
Internal state: N/A

System start time: Fri Jan 21 15:45:28 2011

System uptime: 32 days, 1 hours, 46 minutes, 2 seconds
Kernel uptime: 32 days, 0 hours, 14 minutes, 45 seconds
Active supervisor uptime: 32 days, 1 hours, 45 minutes, 20 seconds
```

**Related Commands**

Command	Description
<b>show system redundancy status</b>	Displays the system redundancy status.

**show resource**

# show resource

To display resources, use the **show resource** command.

```
show resource [internal | m4route-mem | m6route-mem | monitor-session | port-channel |
              u4route-mem | u6route-mem | vlan | vrf ]
```

Syntax Description	<b>internal</b> (Optional) Displays resource manager information
<b>m4route-mem</b>	(Optional) Displays m4route-mem information.
<b>m6route-mem</b>	(Optional) Displays m6route-mem information.
<b>monitor-session</b>	(Optional) Displays monitor session information.
<b>port-channel</b>	(Optional) Displays port-channel information.
<b>u4route-mem</b>	(Optional) Displays u4route-mem information.
<b>u6route-mem</b>	(Optional) Displays u6route-mem information.
<b>vlan</b>	(Optional) Displays VLAN information.
<b>vrf</b>	(Optional) Displays the virtual routing and forwarding (VRF) information.

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show resource</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

<b>Examples</b>	This example shows how to display resources:						
	<pre>vsg# show resource</pre> <table> <thead> <tr> <th>Resource</th> <th>Min</th> <th>Max</th> <th>Used</th> <th>Unused</th> <th>Avail</th> </tr> </thead> </table>	Resource	Min	Max	Used	Unused	Avail
Resource	Min	Max	Used	Unused	Avail		

vlan	16	2049	2	14	2047
monitor-session	0	2	0	0	2
vrf	16	8192	2	14	8190
port-channel	0	768	0	0	768
u4route-mem	32	32	1	31	31
u6route-mem	16	16	1	15	15
m4route-mem	58	58	0	58	58
m6route-mem	8	8	0	8	8

---

**Related Commands****Command****Description****show system resources** Displays system resources.

**show role**

# show role

To show user role information, use the **show role** command.

```
show role [feature | name role-name | pending | pending-diff | session | status]
```

## Syntax Description

<b>feature</b>	(Optional) Displays role features.
<b>name</b>	(Optional) Displays the role name.
<i>role-name</i>	Name of role.
<b>pending</b>	(Optional) Displays uncommitted role configurations.
<b>pending-diff</b>	(Optional) Displays uncommitted role configurations.
<b>session</b>	(Optional) Displays the role session status.
<b>status</b>	(Optional) Displays the role status.

## Defaults

None

## Command Modes

EXEC

Global configuration (config)

## SupportedUserRoles

network-admin  
network-operator

## Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

## Usage Guidelines

You can use the following operators with the **show role** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

## Examples

This example shows how to display the details of the network-admin role:

```
vsg# show role name network-admin

Role: network-admin
Description: Predefined network admin role has access to all commands
on the switch
-----
Rule      Perm      Type      Scope      Entity
-----
```

```
1      permit  read-write
```

**Related Commands**

Command	Description
<b>show users</b>	Displays users.

■ **show running-config**

# show running-config

To display running configurations, use the **show running-config** command.

```
show running-config [aaa | all | am | arp | cdp | cert-enroll | diff | exclude | expand-port-profile
| icmpv6 | igmp | interface | ip | l3vm | monitor | ntp | object-group group-name | policy
policy-name | rule rule-name | security | snmp | vdc-all | vlan | vshd | zone zone-name]
```

Syntax Description	
<b>aaa</b>	(Optional) Displays the authentication, authorization, and accounting (AAA) configuration.
<b>all</b>	(Optional) Displays the current operating configuration with defaults.
<b>am</b>	(Optional) Displays AM information.
<b>arp</b>	(Optional) Displays Address Resolution Protocol (ARP) information.
<b>cdp</b>	(Optional) Displays the Cisco Discovery Protocol (CDP) configuration.
<b>cert-enroll</b>	(Optional) Displays the configuration of the certificates.
<b>diff</b>	(Optional) Displays the difference between the running configuration and the startup configuration.
<b>exclude</b>	(Optional) Excludes displaying specified configurations when performing the <b>show running-config</b> command.
<b>expand-port-profile</b>	(Optional) Displays the port profile.
<b>icmpv6</b>	(Optional) Displays ICMPv6 information.
<b>igmp</b>	(Optional) Displays Internet Group Management Protocol (IGMP) information.
<b>interface</b>	(Optional) Displays interface configurations.
<b>ip</b>	(Optional) Displays IP information.
<b>l3vm</b>	(Optional) Displays Layer 3 Virtual Machine information.
<b>monitor</b>	(Optional) Configures Ethernet SPAN sessions.
<b>ntp</b>	(Optional) Displays Network Time Protocol (NTP) information.
<b>object-group</b>	(Optional) Displays the object-group configuration.
<i>group-name</i>	Object group name.
<b>policy</b>	(Optional) Displays the policy configuration.
<i>policy-name</i>	Policy name.
<b>rule</b>	(Optional) Displays the rule configuration.
<i>rule-name</i>	Rule name.
<b>security</b>	(Optional) Displays the security configuration.
<b>snmp</b>	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
<b>vdc-all</b>	(Optional) Displays the virtual device context (VDC) configuration.
<b>vlan</b>	(Optional) Displays the VLAN configuration.
<b>vshd</b>	(Optional) Displays the running configuration for VSHD.
<b>zone</b>	(Optional) Displays the running configuration for zones.
<i>zone-name</i>	Zone name.

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show running-config** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

When you enter a **show** command that displays a long list of data, you can press **Ctrl-C** at any time to exit that list.

**Examples** This example shows how to display the running configuration:

```
vsg# show running-config

!Command: show running-config
!Time: Wed Feb 23 11:23:41 2011

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show startup-config</b>	Displays the startup configuration.

# show service-path connection

To display service path connection information, use the **show service-path connection** command.

**show service-path connection [svs-domain-id *domain-id* [module *module-number*]]**

<b>Syntax Description</b>	<b>svs-domain-id</b> (Optional) Displays the SVS domain. <i>domain-id</i> Domain identification number. The range is from 1 to 4095. <b>module</b> (Optional) Displays the module. <i>module-number</i> Module number. The range is from 3 to 66.
---------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(3)	The output of the <b>show service-path connection</b> was changed to show that the VLAN column displays VXLAN for any traffic coming from or going to the VXLAN VM machine.
	4.2(1)VSG1(2)	This command was modified to show more organization and detail.
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show service-path connection</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

The **show service-path connection** command might not display inspect-rsh actions for remote shell traffic. This issue affects the display only and does not disrupt the traffic policy decisions.

<b>Examples</b>	This example shows how to display service path connections:  vsg# <b>show service-path connection</b> Flags:
-----------------	-----------------------------------------------------------------------------------------------------------------------

**■ show service-path connection**

P - policy at src	p - policy at dst
O - conn offloaded to ser-path at src	o - conn offloaded to ser-path at dst
S - seen syn from src	s - seen syn from dst
A - seen ack for syn/fin from src	a - seen ack for syn/fin from dst
F - seen fin from src	f - seen fin from dst
R - seen rst from src	r - seen rst from dst
E - tcp conn established (SasA done)	T - tcp conn torn down (FafA done)

#SVS Domain 3720 Module 5			
Proto SrcIP[:Port]	DstIP[:Port]	VLAN Action	Flags
tcp 172.31.2.206:2677	172.31.2.106:80	vxlan permit	PpOoSas

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show svs</b>	Displays SVS information.

# show service-path statistics

To display service path statistics, use the **show service-path statistics** command.

**show service-path statistics [svs-domain-id *domain-id* [module *module-number*]]**

<b>Syntax Description</b>	<b>svs-domain-id</b> (Optional) Displays the SVS domain. <b>domain-id</b> Domain identification number. The range is from 1 to 4095. <b>module</b> (Optional) Displays the module. <b>module-number</b> Module number. The range is from 3 to 66.
---------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show svs</b>	Displays SVS information.

# show snmp

To display Simple Network Management Protocol (SNMP) information, use the **show snmp** command.

```
show snmp [community | context | engineID | group | host | internal | sessions | source-interface | trap | user]
```

Syntax Description	
<b>community</b>	(Optional) Displays SNMP community strings.
<b>context</b>	(Optional) Displays SNMP context mapping entries.
<b>engineID</b>	(Optional) Displays the SNMP engine ID.
<b>group</b>	(Optional) Displays SNMP groups.
<b>host</b>	(Optional) Displays SNMP hosts.
<b>internal</b>	(Optional) Displays internal SNMP information.
<b>sessions</b>	(Optional) Displays SNMP sessions.
<b>source-interface</b>	(Optional) Displays the notifications source interface.
<b>trap</b>	(Optional) Displays SNMP traps.
<b>user</b>	(Optional) Displays SNMPv3 users.

<b>Defaults</b>	None
<b>Command Modes</b>	EXEC Global configuration (config)
<b>SupportedUserRoles</b>	network-admin network-operator
<b>Command History</b>	

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show snmp</b> command: <ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>
<b>Examples</b>	This example shows how to display SNMP users: <pre>vsg# show snmp user</pre>

---

 show snmp

## SNMP USERS

---

User	Auth	Priv(enforce)	Groups
<hr/>			
NOTIFICATION TARGET USERS (configured for sending V3 Inform)			
User	Auth	Priv	
admin	md5	des

# show sockets

To display socket information, use the **show sockets** command.

```
show sockets {client | connection | internal | statistics}
```

Syntax Description	<b>client</b>	Displays client socket information.
	<b>connection</b>	Displays socket connections information.
	<b>internal</b>	Displays internal socket information.
	<b>statistics</b>	Displays socket statistics.

Defaults	None
----------	------

Command Modes	EXEC
	Global configuration (config)

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

Usage Guidelines	You can use the following operators with the <b>show sockets</b> command: <ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>
------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Examples	This example shows how to display socket statistics:  <pre>vsg# show sockets statistics TCP Received:     43556 packets total     0 checksum error, 0 bad offset, 0 too short, 0 MD5 error     33557 packets (1428824 bytes) in sequence     435 duplicate packets (8296 bytes)     0 partially dup packets (0 bytes)     141 out-of-order packets (7736 bytes)     0 packets (0 bytes) with data after window     1 packets after close     0 window probe packets, 0 window update packets     470 duplicate ack packets, 0 ack packets with unsent data</pre>
----------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**■ show sockets**

```

17669 ack packets (1759693 bytes)
TCP Sent:
 20950 total, 0 urgent packets
 20 control packets
 20057 data packets (1759592 bytes)
 5 data packets (736 bytes) retransmitted
 809 ack only packets
 0 window probe packets, 59 window update packets
TCP:
 0 connections initiated, 129 connections accepted, 129 connections established
 129 connections closed (including 107 dropped, 0 embryonic dropped)
 4 total rxmt timeout, 0 connections dropped in rxmt timeout
 40 keepalive timeout, 40 keepalive probe, 0 connections dropped in keepalive

```

**Related Commands****Command****Description****show interface**

Displays information about interfaces.

# show ssh

To display secure shell (SSH) information, use the **show ssh** command.

**show ssh {key | name | server}**

<b>Syntax Description</b>	<b>key</b> Displays the SSH keys. <b>name</b> Displays the preestablished master SSH connections. <b>server</b> Displays the status of SSH on the server.
---------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show ssh</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

<b>Examples</b>	This example shows how to display the SSH keys:
-----------------	-------------------------------------------------

```
vsg# show ssh key

```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show telnet</b>	Displays the Telnet server configuration.

# show startup-config

To display startup configurations, use the **show startup-config** command.

```
show startup-config [aaa | am | arp | cdp | cert-enroll | exclude | expand-port-profile | icmpv6 |
    igmp | interface | ip | l3vm | log | monitor | ntp | security | snmp | vdc-all | vshd]
```

Syntax Description	
<b>aaa</b>	(Optional) Displays the authentication, authorization, and accounting (AAA) configuration.
<b>am</b>	(Optional) Displays AM information.
<b>arp</b>	(Optional) Displays Address Resolution Protocol (ARP) information.
<b>cdp</b>	(Optional) Displays the Cisco Discovery Protocol (CDP) configuration.
<b>cert-enroll</b>	(Optional) Displays the configuration of the certificates configuration.
<b>diff</b>	(Optional) Displays the difference between the running configuration and startup configuration.
<b>expand-port-profile</b>	(Optional) Displays the port profile.
<b>icmpv6</b>	(Optional) Displays Internet Control Message Protocol Version 6 (ICMPv6) information.
<b>igmp</b>	(Optional) Displays Internet Group Management Protocol (IGMP) information.
<b>interface</b>	(Optional) Displays interface configurations.
<b>ip</b>	(Optional) Displays IP information.
<b>l3vm</b>	(Optional) Displays Layer 3 Virtual Machine information.
<b>log</b>	(Optional) Displays the execution log of the latest ASCII startup configuration.
<b>monitor</b>	(Optional) Displays Ethernet Switched Port Analyzer (SPAN) sessions.
<b>ntp</b>	(Optional) Displays Network Time Protocol (NTP) information.
<b>security</b>	(Optional) Displays the security configuration.
<b>snmp</b>	(Optional) Displays the Simple Network Management Protocol (SNMP) configuration.
<b>vdc-all</b>	(Optional) Displays the virtual device context (VDC) configuration.
<b>vshd</b>	(Optional) Displays the running configuration for VSHD.

  

<b>Defaults</b>	None

# show system

To display system information, use the **show system** command.

```
show ssh {clis | cores | error-id | exception-info | internal | pss | redundancy | resources | standby | uptime}
```

**Syntax Description**

<b>clis</b>	Displays the command-line interface (CLI) server.
<b>cores</b>	Displays the core transfer option.
<b>error-id</b>	Displays the system errors.
<b>exception-info</b>	Displays the exception log.
<b>internal</b>	Displays the internal system information.
<b>pss</b>	Displays the most recent PSS shrink status.
<b>redundancy</b>	Displays the redundancy status.
<b>resources</b>	Displays the system resources.
<b>standby</b>	Displays the system standby manual boot option.
<b>uptime</b>	Displays how long the system has been up and running.

**Defaults**

None

**Command Modes**

EXEC

Global configuration (config)

**Usage Guidelines**

You can use the following operators with the **show system** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples**

This example shows how to display system resources:

```
vsg# show system resources
Load average: 1 minute: 0.22 5 minutes: 0.28 15 minutes: 0.12
```

```
Processes      : 245 total, 2 running
CPU states    : 0.0% user, 0.0% kernel, 100.0% idle
Memory usage: 1944668K total, 1041116K used, 903552K free
                  71456K buffers, 398416K cache
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show hardware</b>	Displays hardware information.

■ **show tech-support**

## show tech-support

To display information about technical support, use the **show tech-support** command.

```
show tech-support [adjmgr | arp | bootvar | brief | cert-enroll | cli | clis | details | dhcp | epp |
ethport | ha | icmpv6 | im | include-time | internal | ip | ipv6 | l3vm | module | npacl | ntp |
pktnmgr | platform | port | port-channel | routing | snmp | sockets | sys-mgr | time-optimized |
| vdc | vsd | xml]
```

Syntax Description	
<b>adjmgr</b>	(Optional) Displays adjacency manager information.
<b>arp</b>	(Optional) Displays Address Resolution Protocol (ARP) information.
<b>bootvar</b>	(Optional) Displays detailed information about boot variables.
<b>brief</b>	(Optional) Displays a system summary.
<b>cert-enroll</b>	(Optional) Displays certificate information.
<b>cli</b>	(Optional) Displays information about the parser.
<b>clis</b>	(Optional) Displays information about the command-line interface (CLI) server.
<b>details</b>	(Optional) Displays detailed information about troubleshooting.
<b>dhcp</b>	(Optional) Displays detailed information about Dynamic Host Configuration Protocol (DHCP).
<b>epp</b>	(Optional) Displays detailed information about EPP.
<b>ethport</b>	(Optional) Displays detailed information about the Ethernet port.
<b>ha</b>	(Optional) Displays detailed information about high availability (HA).
<b>icmpv6</b>	(Optional) Displays information about ICMPv6.
<b>im</b>	(Optional) Displays detailed information about IM.
<b>include-time</b>	(Optional) Displays the time it took to gather technical support information.
<b>internal</b>	(Optional) Displays internal troubleshooting information.
<b>ip</b>	(Optional) Displays IP information.
<b>ipv6</b>	(Optional) Displays IPv6 information.
<b>l3vm</b>	(Optional) Display virtual routing and forwarding (VRF) information.
<b>module</b>	(Optional) Displays information about modules.
<b>npacl</b>	(Optional) Displays information about NPACL.
<b>ntp</b>	(Optional) Displays information about the Network Time Protocol (NTP).
<b>pktnmgr</b>	(Optional) Displays packet manager information.
<b>platform</b>	(Optional) Displays platform information.
<b>port</b>	(Optional) Displays port manager information.
<b>port-channel</b>	(Optional) Displays port-channel information.
<b>routing</b>	(Optional) Displays information about routing.
<b>snmp</b>	(Optional) Displays information about the Simple Network Management Protocol (SNMP).
<b>sockets</b>	(Optional) Displays information about sockets.
<b>sys-mgr</b>	(Optional) Displays information about system manager.
<b>time-optimized</b>	(Optional) Gathers tech-support faster.

<b>vdc</b>	(Optional) Displays information about the virtual device context (VDC).
<b>vsd</b>	(Optional) Displays information about VSD.
<b>xml</b>	(Optional) Displays information about XML.

---

<b>Defaults</b>	None

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show debug</b>	Displays debug flags.

# show telnet server

To display the status of Telnet services, use the **show telnet server** command.

## show telnet server

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show telnet server** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display the status of Telnet services:

```
vsg# show telnet server
telnet service not enabled
vsg#
```

Related Commands	Command	Description
	<b>show http</b>	Displays the status of HTTP services.

**show terminal**

# show terminal

To display information about the terminal, use the **show terminal** command.

**show terminal [internal info]**

<b>Syntax Description</b>	<b>internal info</b>	(Optional) Displays internal terminal information.
---------------------------	----------------------	----------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC
	Global configuration (config)

---

 show vsg dvport

## show vsg dvport

To display information about a Cisco VSG DV port, use the **show vsg dvport** command.

**show vsg dvport [port-name]**

<b>Syntax Description</b>	<i>port-name</i>	(Optional) DV port name.
---------------------------	------------------	--------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.

<b>Usage Guidelines</b>	You can use the following operators with the <b>show vsg dvport</b> command:
	<ul style="list-style-type: none"> <li>• &gt;—Redirects the output to a file.</li> <li>• &gt;&gt;—Redirects the output to a file in append mode.</li> <li>•  —Pipes the command output to a filter.</li> </ul>

<b>Examples</b>	This example shows how to display information about a DV port:
	<pre>vsg# show vsg dvport DV Port      : 576:::bcaa1c50-8747-8d08-fe7e-a9aa8924bf8e Security Profile : spcustom VM uuid      : 421c5ae4-51c3-5dd9-60fa-a50cb04ed0ea Port Profile   : vm_data IP Addresses :     100.1.1.20     100.1.1.10</pre>

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show vsg ip-binding</b>	Displays information about IP bindings.

# show vsg ip-binding

To display a list of Virtual Machine (VM) IP addresses and associated VNSP and policy sets, use the **show vsg ip-binding** command.

## show vsg ip-binding

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show vsg ip-binding** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display a list of VM IP addresses:

```
vsg# show vsg ip-binding
-----
 VM IP address      Security-Profile Name      Policy Name
-----
 100.1.1.20          spcustom                   policy_one
 100.1.1.10          sp_new                    policy_one
```

Related Commands	Command	Description
	<b>show vsg security-profile</b>	Displays information about security profiles.

---

 show vsg security-profile

# show vsg security-profile

To display information about security profiles, use the **show vsg security-profile** command.

**show vsg security-profile [vnsn-name | detail | table]**

---

## Syntax Description

<b>vnsn-name</b>	(Optional) Virtual network security profile (VNSP) name.
<b>detail</b>	(Optional) Displays more details about the Cisco VSG security profile.
<b>table</b>	(Optional) Displays security profile information.

---

---

## Defaults

None

---

## Command Modes

EXEC

Global configuration (config)

---

## SupportedUserRoles

network-admin  
network-operator

---

## Command History

Release	Modification
4.2(1)VSG1(1)	This command was introduced.

---

---

## Usage Guidelines

You can use the following operators with the **show vsg security-profile** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

The detail version of the **show vsg security-profile** command includes the names of the VMs that are using the security-profile in addition to security-profile information. A VNSP name can be specified to get details of a specific security-profile.

---

## Examples

This example shows how to display detailed information about the security profile sp\_deny@root:

```
vsg# show vsg security-profile sp_deny@root detail
  VNSP          : sp_deny@root
  VNSP id       : 5
  Policy Name   : ps_deny@root
  Policy id     : 3
  Custom attributes :
    Name        : vnsprorg
    Value       : root
    Name        : profile1
    Value       : eng
```

Virtual Machines:  
sg-pg-vm206  
sg-pg-redhat

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show policy stats</b>	Displays policy statistics.

**show vsg vm**

## show vsg vm

To display information about a Virtual Machine (VM), use the **show vsg vm** command.

**show vsg vm**

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was modified. The optional parameter <i>vm-uuid</i> was removed. The new version of the command does not accept any parameters and always displays information for all the virtual machines.
	4.2(1)VSG1(1)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show vsg vm** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

**Examples** This example shows how to display information for the Cisco VSG VM:

```
vsn22# show vsg vm
VM uuid          : 421c5ae4-51c3-5dd9-60fa-a50cb04ed0ea
VM attributes :
    cluster-name      :
    host-name         : 10.193.73.154
    name              : win2k3
```

Related Commands	Command	Description
	<b>show vsg</b>	Displays Cisco VSG information.

# show vsg vm name

To display the name information about a Virtual Machine (VM), use the **show vsg vm name** command.

**show vsg vm name** *name*

<b>Syntax Description</b>	<i>name</i>	Name or partial name of a VM in your Cisco VSG network.
<b>Defaults</b>	None	
<b>Command Modes</b>	EXEC Global configuration (config)	
<b>Supported User Roles</b>	network-admin network-operator	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(2)	This command was introduced.

**Usage Guidelines** You can use the following operators with the **show vsg vm name** command:

- >—Redirects the output to a file.
- >>—Redirects the output to a file in append mode.
- |—Pipes the command output to a filter.

This command displays information for one or more VMs. The VM name should be specified as a parameter and can be a prefix (first few characters) or the entire name. The information for the VM includes details of each DV port used by the VM and zones that the VM belongs to.

## Examples

This example shows how to display information for the Cisco VSG VM with name linux-204:

```
vsg# show vsg vm name linux-204
VM uuid          : 421ceac2-3b3f-67f9-b71c-3755d2c8cabe
VM attributes :
  cluster-name      : cluster23
  host-name         : 10.193.77.204
  name              : linux-204-184
  os-fullname       : red hat enterprise linux 4 (32-bit)
  os-hostname       :
  res-pool          : resources
  tools-status      : not-installed
  vapp-name         :
DV Port(s) :
  DV Port          : 272::1c7b1c50-f1b7-9a71-259d-820f4713a4b1
```

**show vsg vm name**

```

Security Profile      : SP-DC1@root/Cisco-Tenant1
Port Profile          : profile_App2
IP Addresses :
  20.100.201.184
DV Port               : 240::1c7b1c50-f1b7-9a71-259d-820f4713a4b1
Security Profile      : SP-App1@root/Cisco-Tenant1
Port Profile          : profile_App1
IP Addresses :
  10.100.201.184
Zone(s) :
  zone_linux_204@root/Cisco-Tenant1

```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>show vsg</b>	Displays Cisco VSG information.

# show vsg vm uuid

To display the Cisco VSG virtual machine UUID, use the **show vsg vm uuid** command.

**show vsg vm uuid *uuid***

<b>Syntax Description</b>	<i>uuid</i>	Designates the name of the UUID.
<b>Defaults</b>	None	
<b>Command Modes</b>	EXEC Global configuration (config)	
<b>SupportedUserRoles</b>	network-admin network-operator	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(2)	This command was introduced.
<b>Usage Guidelines</b>	This command requires the VM UUID as a parameter. Information for the specified VM is displayed.	
<b>Examples</b>	This example shows how to display the Cisco VSG UUID information:	
	<pre>vsg# show vsg vm uuid 421cefd6-29d1-4c8e-e563-2c3a4d58cd31 VM uuid      : 421cefd6-29d1-4c8e-e563-2c3a4d58cd31 VM attributes :   cluster-name      :   host-name        : 10.193.77.206   name             : linux-206-185   osfullname       : red hat enterprise linux 4 (32-bit)   oshostname       :   resource-pool    : resource-pool1   tools-status     : not-installed   vapp-name        :   Zone(s)          :</pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show vsg</b>	Displays Cisco VSG information.

**show vsg zone**

# show vsg zone

To display the Cisco VSG zones, use the **show vsg zone** command.

**show vsg zone**

**Syntax Description** This command has no keywords or arguments.

**Defaults** None

**Command Modes** EXEC  
Global configuration (config)

**SupportedUserRoles** network-admin  
network-operator

Command History	Release	Modification
	4.2(1)VSG1(2)	This command was introduced.

**Examples** This example shows how to display Cisco VSG zones:

```
vsg(config-nsc-policy-agent)# show vsg zone
Zone : centos5.3_2_VEM2@root/tenant_d3337/dc1
Virtual Machines :
    centos5.3_2_vem2
-----
Zone : tenant_3337_zonename1@root/tenant_d3337
Virtual Machines :
-----
Zone : deletetest@root/tenant_d3337
Virtual Machines :
    centos5.3_1
    centos5.3_vlan100
    centos5.3_2_vem2
    centos5.3_2_vem1
    win2003entr2-32_vlan150_100_split
    centos5.2
    centos5.3_1_vem2
    centos5.3_3_vem1_clone
    centos5.3_3_vem2_clone
```

**Related Commands**

Command	Description
<b>show vsg</b>	Displays Cisco VSG information.

# show xml server

To display XML server information, use the **show xml server** command.

**show xml server [logging | status]**

<b>Syntax Description</b>	<b>logging</b> (Optional) Displays the logging configuration and the contents of the log file. <b>status</b> (Optional) Displays XML agent information.
---------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	EXEC Global configuration (config)
----------------------	---------------------------------------

<b>SupportedUserRoles</b>	network-admin network-operator
---------------------------	-----------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.2(1)VSG1(1)	This command was introduced.
