# Upgrading the Cisco VSG and the Cisco Prime NSC

This chapter contains the following sections:

## Complete Upgrade Procedure

***Table 1: Refer to the Section in Table Based on your Pre-upgrade Product Release***

| You are Upgrading From | Follow The Sequential Steps in the Following Section: |
|---|---|
| Cisco VSG Release 5.2(1)VSG2(2.0) to Release 5.2(1)VSG2(2.1) and Cisco Prime NSC Release 3.4.2a to Release 3.4.2b | Upgrade Procedures for Cisco VSG Release 5.2(1)VSG2(2.0) to Release 5.2(1)VSG2(2.1) and Cisco Prime NSC Release 3.4.2a to Release 3.4.2b.<br>This includes upgrade procedures for Cisco Nexus 1000V Release 5.2(1)SV3(2.8) to Release 5.2(1)SV3(3.1). |

To upgrade the Cisco PNSC, Cisco VSG, and Cisco Nexus 1000V, follow the steps sequentially:

1. Stage 1: Upgrading Cisco PNSC
2. Stage 2: Upgrading a Cisco VSG Pair
3. Stage 3: Upgrading the VSM pair and the VEMs

**Note** We highly recommend that you upgrade the Cisco VSG and the Cisco PNSC in the sequence listed. Any deviation from the ordered steps could cause disruption of your connectivity and data communication. The Cisco PNSC must be upgraded with the corresponding policy agent (PA).

## Information About Cisco Prime NSC Upgrades

When you upgrade the Cisco PNSC software, all current command-line interface (CLI) and graphical user interface (GUI) sessions are interrupted, which means that you must restart any CLI or GUI sessions.

## Information About Cisco VSG Upgrades

The upgrade procedure for a standalone Cisco VSG is hitful, which means that you must manually reload the Cisco VSG for the new image to become effective. In HA mode, the upgrade is hitless, which means that the standby Cisco VSG is upgraded first and then after a switchover, the previously active Cisco VSG is upgraded.

Because license information is not stored with the Cisco VSG but is maintained between the Virtual Supervisor Module (VSM) and Virtual Ethernet Module (VEM), if packets are received at the Cisco VSG, that means that the license is valid and the packets are processed.

An upgrade affects two bin files: the kickstart file and the system file.

An upgrade does not erase any of the existing information, when the Cisco VSG comes online. Because the Cisco VSG is stateless, it gets all this information from the Cisco PNSC at bootup.

# Upgrade Guidelines and Limitations

Before upgrading the Cisco PNSC, Cisco VSG, and Cisco Nexus 1000V, read the following:

- We highly recommend that you upgrade the Cisco VSG and the Cisco PNSC in the order provided. Any deviation from the ordered steps could cause disruption of your connectivity and data communication. The Cisco PNSC must be upgraded with the corresponding policy agent (PA).
- We recommend that you take a snapshot or backup (clone) of the original Cisco PNSC and VSM prior to the upgrade process and then perform an ISSU upgrade process on both the VSM and the Cisco VSG. We do not recommend that you perform a manual upgrade.
- For a full In-service Software Upgrade (ISSU) upgrade on both the Cisco VSG and VSM, follow these rules:
  - Install the Cisco PNSC before installing the Cisco VSG and VSM. The ISSU upgrade installs a new PA.
  - A new PA with an old Cisco PNSC is not supported and there should never be an interim stage in this state.
  - A copy run start is not required after the VSM upgrade.
- The **vn-service** command is changed to the **vservice** command on the VSM port-profile in VSM Release 4.2(1)SV1(5.2).

- Upgrade instructions include the following information:
  - Different stages of complete upgrade procedures and operations which are supported at different stages.
  - Different component versions after each stage.
  - Different operations supported after each stage.

# VSG Environment Upgrade Matrix and Path

Cisco VSG upgrade involves upgrading the VSG, VNMC or PNSC, and Nexus 1000V environment. To upgrade VSG, you need to make sure that compatible versions of VSG, VNMC or PNSC, and Nexus 1000V are installed. This section lists the compatibility information and upgrade path for Cisco VSG, Cisco VNMC/PNSC, and Cisco Nexus 1000V versions.

***Table 2: Cisco VSG, Cisco VNMC/PNSC, and Cisco Nexus 1000V Compatibility Matrix***

| VSG Version | Supported VNMC/PNSC Release | Supported Nexus 1000V Release |
|---|---|---|
| VSG 1.4 | VNMC 2.0 | 4.2(1)SV2(1.1a) |
| VSG 2.1.1 | VNMC 2.1 | 4.2(1)SV2(2.1) |
| VSG 2.1.1 | PNSC 3.0.2e | 4.2(1)SV2(2.1a) |
| VSG 2.1.1 | PNSC 3.2.1d | 4.2(1)SV2(2.2) |
| VSG 2.1.1 | PNSC 3.2.1d | 4.2(1)SV2(2.3) |
| VSG 2.1.2 | PNSC 3.2.2b | 5.2(1)SV3(1.1) |
| VSG 2.1.2a | PNSC 3.2.2b | 5.2(1)SV3(1.2) |
| VSG 2.1.2c | PNSC 3.4.1b | 5.2(1)SV3(1.3) |
| VSG 2.1.2c | PNSC 3.4.1b | 5.2(1)SV3(1.4) |
| VSG 2.1.3 | PNSC 3.4.1b | 5.2(1)SV3(1.4) |
| VSG 2.1.3 | PNSC 3.4.1c | 5.2(1)SV3(1.5x) |
| VSG 2.1.4 | PNSC 3.4.1d | 5.2(1)SV3(1.6) |
| VSG 2.1.4 | PNSC 3.4.1d | 5.2(1)SV3(1.15) |
| VSG 2.1.4 | PNSC 3.4.1d | 5.2(1)SV3(2.1) |
| VSG 2.2.0 | PNSC 3.4.2a | 5.2(1)SV3(2.1) |

| | | |
|---|---|---|
| VSG 2.2.0 | PNSC 3.4.2a | 5.2(1)SV3(2.8) |
| VSG 2.2.1 | PNSC 3.4.2b | 5.2(1)SV3(3.1) |

***Table 3: Cisco VSG Upgrade Path***

| Initial VSG Version | Intermediate State | Final VSG Version |
|---|---|---|
| VSG 1(4.1) | NA | VSG 2(2.1) |
| VSG 2(1.1) | NA | VSG 2(2.1) |
| VSG 2(1.2) | NA | VSG 2(2.1) |
| VSG 2(1.2a) | NA | VSG 2(2.1) |
| VSG 2(1.1) | NA | VSG 2(2.1) |
| VSG 2(1.2a) | NA | VSG 2(2.1) |
| VSG 2(1.2c) | NA | VSG 2(2.1) |
| VSG 2(1.3) | NA | VSG 2(2.1) |
| VSG 2(1.4) | NA | VSG 2(2.1) |
| VSG 2(2.0) | NA | VSG 2(2.1) |

***Table 4: Cisco VNMC/PNSC Upgrade Path***

| Initial Version | Intermediate State(s) | Final Version |
|---|---|---|
| 2.0.3 | 2.1->3.0.2g->3.2.2a->3.4.1d | 3.4.2b |
| 2.1 | 3.0.2->3.2.2a->3.4.1d | 3.4.2b |
| 3.0.2 | 3.2.2a->3.4.1d | 3.4.2b |
| 3.2.1d | 3.4.1d | 3.4.2b |
| 3.2.2b | 3.4.1d | 3.4.2b |
| 3.4.1b | 3.4.1d | 3.4.2b |
| 3.4.1c | 3.4.1d | 3.4.2b |
| 3.4.1d | NA | 3.4.2b |

| | | |
|---|---|---|
| 3.4.2a | NA | 3.4.2b |

**Note** For detailed information about Upgrading PNSC, see Upgrading Prime Network Services Controller.

***Table 5: Cisco Nexus 1000V Upgrade Path***

| Initial Version | Intermediate State(s) | Final Version |
|---|---|---|
| 4.2.1.SV1.5.1a | 4.2.1.SV2.2.2 | 5.2(1)SV3(3.1) |
| 4.2.1.SV1.5.2b | 4.2.1.SV2.2.2 | 5.2(1)SV3(3.1) |
| 4.2.1.SV2.1.1a | NA | 5.2(1)SV3(3.1) |
| 4.2.1.SV2.2.1a | NA | 5.2(1)SV3(3.1) |
| 4.2.1.SV2.2.2 | NA | 5.2(1)SV3(3.1) |
| 4.2.1.SV2.2.3 | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.1) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.2) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.3) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.4) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.5x) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.6) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(1.15) | NA | 5.2(1)SV3(3.1) |
| 5.2(1)SV3(2.8) | NA | 5.2(1)SV3(3.1) |

**Note** For detailed information about upgrading VSG/PNSC, see Cisco VSG Install and Upgrade Guides.

**Note** For information about Cisco Nexus 1000V and VMware ESX/ESXi upgade compatibility, see Cisco Nexus 1000V and VMware ESX/ESXi Upgrade Utility

# Upgrade Procedure for Cisco VSG Release 5.2(1)VSG2(2.0) to Release 5.2(1)VSG2(2.1), Cisco PNSC Release 3.4.2a to Release 3.4.2b and Cisco Nexus 1000V Release 5.2(1)SV3(2.8) to Release 5.2(1)SV3(3.1)

## Cisco VSG Release 5.2(1)VSG2(2.0) to 5.2(1)VSG2(2.1) and Cisco Prime NSC 3.4.2a to 3.4.2b Staged Upgrade

| Virtual Appliance | Original State | Stage 1: Cisco PNSC Upgrade only (no PAs upgraded) | Stage 2: Cisco VSG Upgrade (ISSU: PA upgrade) | Stage 3: VSM/VEM Upgrade (ISSU: PA upgrade) |
|---|---|---|---|---|
| Cisco PNSC | Old Cisco Prime NSC 3.4.2a | New Cisco Prime NSC 3.4.2b | New Cisco Prime NSC 3.4.2b | New Cisco Prime NSC 3.4.2b |
| Cisco VSG | Old 5.2(1)VSG2(2.0) | Old 5.2(1)VSG2(2.0) | New 5.2(1)VSG2(2.1) | New 5.2(1)VSG2(2.1) |
| VSG PA | Old 2.1(3b) | Old 2.1(3b) | New 2.1(3i) | New 2.1(3i) |
| VSM | Old 5.2(1)SV3(2.8) | Old 5.2(1)SV3(2.8) | Old 5.2(1)SV3(2.8) | New 5.2(1)SV3(3.1) |
| VEM | Old 5.2(1)SV3(2.8) | Old 5.2(1)SV3(2.8) | Old 5.2(1)SV3(2.8) | New 5.2(1)SV3(3.1) |
| VSM PA | 3.2(2d) | 3.2(2d) | 3.2(2d) | 3.2(3a) |

| Virtual Appliance | Original State | Stage 1: Cisco PNSC Upgrade only (no PAs upgraded) | Stage 2: Cisco VSG Upgrade (ISSU: PA upgrade) | Stage 3: VSM/VEM Upgrade (ISSU: PA upgrade) |
|---|---|---|---|---|
| Supported operations after upgrading to each stage | All operations supported | • Existing data sessions (offloaded).<br>• New data sessions.<br>• Allows Cisco Nexus 1000V switch (non-vn-service) operations including non-vn-service port profiles. | • Short disruption in new data session establishment during the Cisco VSG upgrade.<br>• Other operations are fully supported.<br>• Full Layer 3 VSG and VM VXLAN support. | • All operations are supported if all the upgrades including VEMs are successful.<br>• Restricted operations (below) apply only if all VEMs are not upgraded<br>• Disruption of data traffic during VEM upgrades.<br>• Full service chaining is supported.<br>• Layer 3 VSG and VM VXLAN support.<br>• VSG on VXLAN is supported. |

| Virtual Appliance | Original State | Stage 1: Cisco PNSC Upgrade only (no PAs upgraded) | Stage 2: Cisco VSG Upgrade (ISSU: PA upgrade) | Stage 3: VSM/VEM Upgrade (ISSU: PA upgrade) |
|---|---|---|---|---|
| | | • Support for Cisco PNSC policy cfg change (assuming silent drops).<br>• Support for VSM/VEM vn-service VM operations (shutdown/bring up existing vn-service VMs, bring down net adapters, etc).<br>• Support for new vn-service VMs.<br>• Support for Vmotion of vn-service firewalled VMs on N1k.<br>• Support for vn-service PP operations or modifications (toggles, removal, changing the PP on VSM).<br>• Support for VSG failover, VSM failover (vns-agent) (All VSM to Cisco PNSC to VSG control operations are supported). | • Support for Cisco PNSC policy cfg change (assuming silent drops).<br>• Support for VSM/VEM vn-service VM operations (shutdown/bring up existing vn-service VMs, bring down net adapters, etc).<br>• Support for new vn-service VMs.<br>• Support for Vmotion of vn-service firewalled VMs on N1k.<br>• Support for vn-service PP operations or modifications (toggles, removal, changing the PP on VSM).<br>• Support for VSG failover, VSM failover (vns-agent). (All VSM to Cisco PNSC to VSG control operations are supported). | • Support for Cisco PNSC policy cfg change.<br>• Support for VSM/VEM vn-service VM operations (shutdown/bring up existing vn-service VMs, bring down net adapters, etc).<br>• Support for new vn-service VMs.<br>• Support for boot strap of devices (Cisco PNSC, VSM,VSG).<br>• Support for Vmotion of vn-service VMs on N1k.<br>• Support for vn-service PP operations or modifications (toggles, removal, changing the PP on VSM).<br>• Support for N1k switch (non vn-service) operations, including non-vn-service PPs (VSM+VEM ugraded) (All VSM to Cisco PNSC to VSG control operations are supported). |

**Note** Because we support full ISSU upgrade on both VSG and VSM that involves installing a new PA, you should install the Cisco PNSC first. The new PA may not support the old VNMC.

# Upgrading Cisco Prime NSC 3.4.2a to Cisco Prime NSC 3.4.2b

### Before You Begin

- You are logged in to the CLI in EXEC mode.
- You have backed up the new software files to a remote server and have verified that the backup file was created on the remote server.
- You must have the Cisco PNSC Release 3.4.2b downloaded.

## SUMMARY STEPS

1. nsc# **connect local-mgmt**
2. (Optional) nsc (local-mgmt)# **show version**
3. (Optional) nsc (local-mgmt)# **copy scp://user@***example-server-ip/example-dir/filename* **bootflash:/**
4. nsc (local-mgmt)# **dir bootflash:/**
5. nsc (local-mgmt)# **update bootflash:/***filename*
6. (Optional) nsc (local-mgmt)# **service status**
7. (Optional) nsc (local-mgmt)# **show version**

## DETAILED STEPS

| | Command or Action | Purpose |
|---|---|---|
| **Step 1** | nsc# **connect local-mgmt** | Places you in local management mode. |
| **Step 2** | nsc (local-mgmt)# **show version** | (Optional)<br>Displays the version information for the Cisco PNSC software. |
| **Step 3** | nsc (local-mgmt)# **copy scp://user@***example-server-ip/example-dir/filename* **bootflash:/** | (Optional)<br>Copies the Cisco PNSC software file to the VM. |
| **Step 4** | nsc (local-mgmt)# **dir bootflash:/** | Verifies that the desired file is copied in the directory. |
| **Step 5** | nsc (local-mgmt)# **update bootflash:/***filename* | Begins the update of the Cisco PNSC software. |
| **Step 6** | nsc (local-mgmt)# **service status** | (Optional)<br>Allows you to verify that the server is operating as desired. |
| **Step 7** | nsc (local-mgmt)# **show version** | (Optional)<br>Allows you to verify that the Cisco PNSC software version is updated. |

| | Command or Action | Purpose |
|---|---|---|
| | | **Note** After you upgrade to Cisco PNSC Release 3.4.2b, you might see the previous version of Cisco PNSC in your browser. To view the upgraded version, clear the browser cache and browsing history in the browser. This note applies to all supported browsers: Internet Explorer, Mozilla Firefox, and Chrome.<br>**Note** For detailed information about Upgrading PNSC, see Upgrading Prime Network Services Controller. |

### Configuration Example

The following example shows how to connect to the local-mgmt mode:

```
nsc# connect local-mgmt
Cisco Prime Network Services Controller
TAC support: http://www.cisco.com/tac
Copyright (c) 2002-2017, Cisco Systems, Inc. All rights reserved.
The copyrights to certain works contained in this software are
owned by other third parties and used and distributed under
license. Certain components of this software are licensed under
the GNU General Public License (GPL) version 2.0 or the GNU
Lesser General Public License (LGPL) Version 2.1. A copy of each
such license is available at
http://www.opensource.org/licenses/gpl-2.0.php and
http://www.opensource.org/licenses/lgpl-2.1.php
```

The following example shows how to display version information for the Cisco PNSC:

```
nsc(local-mgmt)# show version

Name Package Version GUI
---- ------- ------- ----
core Base System 3.4(2a) 3.4(2a) service-reg
Service Registry 3.4(2a) 3.4(2a) policy-mgr
Policy Manager 3.4(2a) 3.4(2a) resource-mgr
Resource Manager 3.4(2a) 3.4(2a) vm-mgr
VM manager 3.4(2a) none vsm-service
VSM Service 3.4(2a) none cloudprovider-mgr
Cloud Provider Mgr 3.4(2a) none
localhost(local-mgmt)#
```

The following example shows how to copy the Cisco PNSC software to the VM:

```
nsc(local-mgmt)# copy scp://<user@example-server-ip>/example1-dir/nsc.3.4.2b.bin bootflash:/
Enter password:
100%  143MB  11.9MB/s   00:12
```

The following example shows how to see the directory information for Cisco PNSC:

```
nsc(local-mgmt)# dir bootflash:/

    1.1G Dec 05 00:57 nsc.3.4.2b.bin

Usage for bootflash://

             6359716 KB used
            10889320 KB free
            18187836 KB total
```

The following example shows how to start the update for the Cisco PNSC:

```
nsc(local-mgmt)# update bootflash:/nsc.3.4.2b.bin
It is recommended that you perform a full-state backup before updating any VNMC component.
  Press enter to continue or Ctrl-c to exit.
```

The following example shows how to display the updated version for the Cisco PNSC:

```
nsc(local-mgmt)# show version

Name                 Package              Version        GUI
---- -------- ------- ----
core                 Base System          3.4.2b         3.4.2b
service-reg          Service Registry     3.4.2b         3.4.2b
policy-mgr           Policy Manager       3.4.2b         3.4.2b
resource-mgr         Resource Manager     3.4.2b         3.4.2b
vm-mgr               VM manager           3.4.2b         none
cloudprovider-mgr    Cloud Provider Mgr   3.4.2b         none
```

# Upgrading Cisco VSG from Release 5.2(1)VSG2(2.0) to 5.2(1)VSG2(2.1) Using a Binary File

Enter the commands on all Cisco VSG nodes on your network.

### Before You Begin

- You are logged in to the CLI in EXEC mode.
- You have copied the new system image, kickstart image and the Cisco VSG policy agent image into the bootflash file system using the following commands:

```
vsg# copy
scp://user@scpserver.cisco.com/downloads/nexus-1000v-kickstart.5.2.1.VSG2.2.1.bin
bootflash:nexus-1000v-kickstart.5.2.1.VSG2.2.1.bin

vsg# copy scp://user@scpserver.cisco.com/downloads/nexus-1000v.5.2.1.VSG2.2.1.bin
bootflash:nexus-1000v.5.2.1.VSG2.2.1.bin

vsg# copy scp://user@scpserver.cisco.com/downloads/nsc-vsgpa.2.1.3i.bin
bootflash:nsc-vsgpa.2.1.3i.bin
```

- You have confirmed that the system is in high availability (HA) mode for an HA upgrade using the **show system redundancy status** command.

### DETAILED STEPS

| | Command or Action | Purpose |
|---|---|---|
| **Step 1** | **configure terminal** | Enters global configuration mode. |
| **Step 2** | **install all kickstart bootflash:***nexus-1000v-kickstart.5.2.1.VSG2.2.1.bin* **system bootflash:***nexus-1000v.5.2.1.VSG2.2.1.bin* **nscpa bootflash:***nsc-vsgpa.2.1.3i.bin* | Installs the kickstart image, system image, and policy agent (PA) image.<br>**Note** If you do not have a policy agent installed on the Cisco VSG before the **install all** command is executed, the PA will not be upgraded (installed) with the image. Make sure that the current version of policy agent is installed before you begin the upgrade process. |
| **Step 3** | **show nsc-pa status** | Verifies that the new PA is installed and the upgrade was successful.<br>**Note** You must have an existing PA installed before upgrading the PA using the **install all** command. |

| | Command or Action | Purpose |
|---|---|---|
| **Step 4** | **copy running-config startup-config** | Saves the change persistently through reboots and restarts by copying the running configuration to the startup configuration. |

### Configuration Example

The following example shows how to upgrade Cisco VSG Release 5.2(1)VSG2(2.0) to Release 5.2(1)VSG2(2.1):

```
vsg # configure terminal
vsg (config)# install all kickstart bootflash:nexus-1000v-kickstart.5.2.1.VSG2.2.1.bin
system bootflash:nexus-1000v.5.2.1.VSG2.2.1.bin nscpa bootflash:nsc-vsgpa.2.1.3i.bin
vsg (config)# show nsc-pa status
NNSC Policy-Agent status is - Installed Successfully. Version 2.1(3i)-vsg
vsg(config)# copy running-config startup-config
```

# Upgrading Cisco VSG from Release 5.2(1)VSG2(2.0) to 5.2(1)VSG2(2.1) Using an ISO File

Enter the commands on all Cisco VSG nodes on your network.

### Before You Begin

- You are logged in to the CLI in EXEC mode.
- You have copied the new ISO image into the bootflash file system using the following commands:
  ```
  vsg# copy scp://user@scpserver.cisco.com/downloads/nexus-1000v.5.2.1.VSG2.2.1.iso
  bootflash:nexus-1000v.5.2.1.VSG2.2.1.iso
  ```
- You have confirmed that the system is in high availability (HA) mode.
- Cisco VSG upgrade using ISO file supported on Cisco Nexus 1000V Release 5.2(1)SV3(1.1) and later.

### DETAILED STEPS

| | Command or Action | Purpose |
|---|---|---|
| **Step 1** | **configure terminal** | Enters global configuration mode. |
| **Step 2** | **install all iso bootflash:***nexus-1000v.5.2.1.VSG2.2.1.iso* | Installs the system image. |
| **Step 3** | **show nsc-pa status** | Verifies that the new PA is installed and the upgrade was successful. |
| **Step 4** | **copy running-config startup-config** | Saves the change persistently through reboots and restarts by copying the running configuration to the startup configuration. |

### Configuration Example

The following example shows how to upgrade Cisco VSG Release 5.2(1)VSG2(2.0) to Release 5.2(1)VSG2(2.1) using an ISO file:

```
vsg # configure terminal
vsg (config)# install all iso bootflash:nexus-1000v.5.2.1.VSG2.2.1.iso
vsg (config)# show nsc-pa status
NNSC Policy-Agent status is - Installed Successfully. Version 2.1(3i)-vsg
vsg(config)# copy running-config startup-config
```

# Upgrading VSMs

## Upgrade Procedures

The following table lists the upgrade steps.

**Note** Ensure that you have changed the VSM mode to advanced, before upgrading VSM. VSG services are not available in the essential mode.

***Table 6: Upgrade Paths from Cisco Nexus 1000V Releases***

| If you are running this configuration | Follow these steps |
|---|---|
| Release 4.0(4)SV1(1), 4.0(4)SV1(2), 4.2(1)SV1(4), 4.2(1)SV1(5.1), and 4.2(1)SV1(5.2) | Direct upgrades from these releases are not supported. |
| Releases 4.0(4)SV1(3x) Series | 1 Upgrading from Releases 4.0(4)SV1(3, 3a, 3b, 3c, 3d) to Release 4.2(1)SV1(4b)<br>2 Upgrade from Releases 4.2(1)SV2(1.1) and later releases to the current release |
| Release 4.2(1)SV1(4x) Series with a vSphere release 4.0 Update 1 or later | 1 Upgrading from VMware Release 4.0 to VMwrae Release 5.0 or later.<br>2 Upgrading VSMs from releases 4.2(1)SV1(4x) to 4.2(1)SV2(1.1) or later.<br>3 Upgarding VEMs from releases 4.2(1)SV1(4x) to 4.2(1)SV2(1.1) or later.<br>4 Upgrading VSMs from releases 4.2(1)SV2(1.1) or later to current release.<br>5 Upgrading VEMs from releases 4.2(1)SV2(1.1) or later to current release. |

| If you are running this configuration | Follow these steps |
|---|---|

## Software Images

The software image install procedure is dependent on the following factors:

- Software images—The kickstart and system image files reside in directories or folders that you can access from the Cisco Nexus 1000V software prompt.
- Image version—Each image file has a version.
- Disk—The bootflash: resides on the VSM.

## In-Service Software Upgrades on Systems with Dual VSMs

**Note** Performing an In-service Upgrade (ISSU) from Cisco Nexus 1000V Release 4.2(1)SV1(4x), 4.2(1)SV1(5.1x), 4.2(1)SV1(5.2x) to the current release of Cisco Nexus 1000V is not supported.

The Cisco Nexus 1000V software supports in-service software upgrades (ISSUs) for systems with dual VSMs. An ISSU can update the software images on your switch without disrupting data traffic. Only control traffic is disrupted. If an ISSU causes a disruption of data traffic, the Cisco Nexus 1000V software warns you before proceeding so that you can stop the upgrade and reschedule it to a time that minimizes the impact on your network.

**Note** On systems with dual VSMs, you should have access to the console of both VSMs to maintain connectivity when the switchover occurs during upgrades. If you are performing the upgrade over Secure Shell (SSH) or Telnet, the connection will drop when the system switchover occurs, and you must reestablish the connection.

An ISSU updates the following images:

- Kickstart image

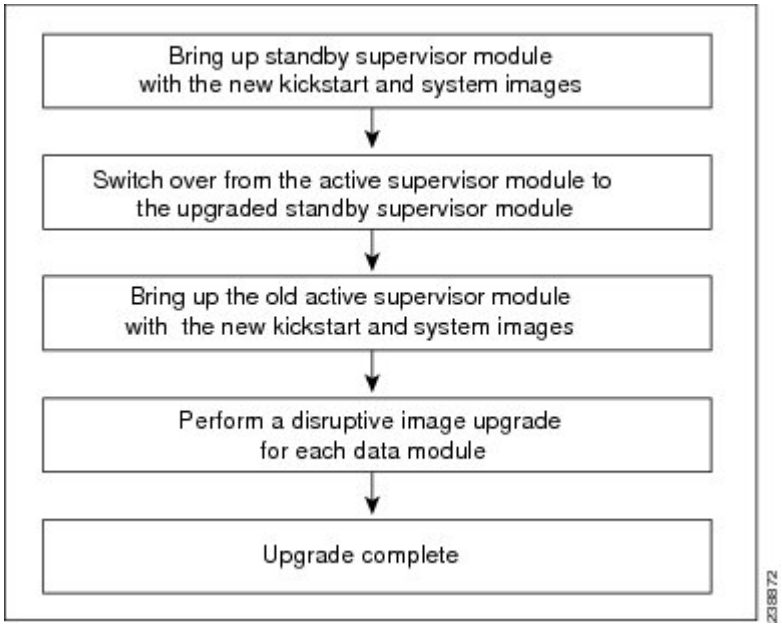
- System image
- VEM images
- Policy Agent image

All of the following processes are initiated automatically by the upgrade process after the network administrator enters the **install all** command.

## ISSU Process for the Cisco Nexus 1000V

The following figure shows the ISSU process.

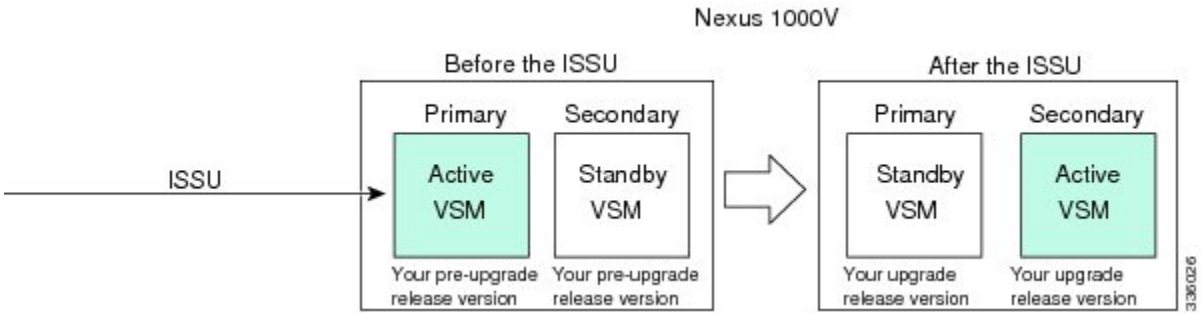
***Figure 1: ISSU Process***



## ISSU VSM Switchover

The following figure provides an example of the VSM status before and after an ISSU switchover.

***Figure 2: Example of an ISSU VSM Switchover***



## ISSU Command Attributes

### Support

The **install all** command supports an in-service software upgrade (ISSU) on dual VSMs in an HA environment and performs the following actions:

- Determines whether the upgrade is disruptive and asks if you want to continue.
- Copies the kickstart and system images to the standby VSM.
- Sets the kickstart and system boot variables.
- Reloads the standby VSM with the new Cisco Nexus 1000V software.
- Causes the active VSM to reload when the switchover occurs.

### Benefits

The **install all** command provides the following benefits:

- You can upgrade the VSM by using the **install all** command.
- You can receive descriptive information on the intended changes to your system before you continue with the installation.
- You have the option to cancel the command. Once the effects of the command are presented, you can continue or cancel when you see this question (the default is no):

```
Do you want to continue (y/n) [n]: y
```

- You can upgrade the VSM using the least disruptive procedure.
- You can see the progress of this command on the console, Telnet, and SSH screens:
  - After a switchover process, you can see the progress from both the VSMs.
  - Before a switchover process, you can see the progress only from the active VSM.

- The **install all** command automatically checks the image integrity, which includes the running kickstart and system images.
- The **install all** command performs a platform validity check to verify that a wrong image is not used.
- The Ctrl-C escape sequence gracefully ends the **install all** command. The command sequence completes the update step in progress and returns to the switch prompt. (Other upgrade steps cannot be ended by using Ctrl-C.)
- After running the **install all** command, if any step in the sequence fails, the command completes the step in progress and ends.

## Upgrading VSMs from Releases 4.2(1)SV2(1.1x), 4.2(1)SV2(2.1x), 5.2(1)SV3(1.x), 5.2(1)SV3(x) to 5.2(1)SV3(3.x)

**Step 1** Log in to the active VSM.

**Step 2** Log in to Cisco.com to access the links provided in this document. To log in to Cisco.com, go to the URL http://www.cisco.com/ and click **Log In** at the top of the page. Enter your Cisco username and password.

**Note** Unregistered Cisco.com users cannot access the links provided in this document.

**Step 3** Access the Software Download Center by using this URL:
http://software.cisco.com/download/navigator.html

**Step 4** Navigate to the download site for your system.
You see links to the download images for your switch.

**Step 5** Choose and download the Cisco Nexus 1000V zip file and extract the kickstart and system software files to a server.

**Step 6** Ensure that the required space is available for the image file(s) to be copied.

```
switch# dir bootflash:
.
.
.
Usage for bootflash://
  485830656 bytes used
 1109045248 bytes free
 1594875904 bytes total
```

**Tip** We recommend that you have the kickstart and system image files for at least one previous release of the Cisco Nexus 1000V software on the system to use if the new image files do not load successfully.

**Step 7** Verify that there is space available on the standby VSM.

```
switch# dir bootflash://sup-standby/
.
.
.
Usage for bootflash://
  485830656 bytes used
 1109045248 bytes free
 1594875904 bytes total
```

**Step 8** Delete any unnecessary files to make space available if you need more space on the standby VSM.

**Step 9** If you plan to install the images from the bootflash:, copy the Cisco Nexus 1000V kickstart and system images to the active VSM by using a transfer protocol. You can use ftp:, tftp:, scp:, or sftp:. The examples in this procedure use scp:.

**Note** When you download an image file, change to your FTP environment IP address or DNS name and the path where the files are located.

- Copy kickstart and system images.

```
switch# copy scp://user@scpserver.cisco.com/downloads/n1000v-dk9-kickstart.5.2.1.SV3.3.1.bin
bootflash:n1000v-dk9-kickstart.5.2.1.SV3.3.1.bin
switch# copy scp://user@scpserver.cisco.com/downloads/n1000v-dk9.5.3.1.SV3.v.bin
bootflash:n1000v-dk9.5.2.1.SV3.3.1.bin vnmpa bootflash:vsmcpa.3.2.3a.bin
```

**Step 10** Check on the impact of the ISSU upgrade for the kickstart and system images.

- kickstart and system

```
switch# show install all impact kickstart bootflash:nexus-1000v-kickstart.5.2.1.SV3.3.1.bin system
bootflash:nexus-1000v.5.2.1.SV3.3.1.bin

Compatibility check is done:
Module  bootable          Impact  Install-type  Reason
------  --------  --------------  ------------  ------
     1       yes  non-disruptive         reset
     2       yes  non-disruptive         reset

Images will be upgraded according to following table:
Module       Image         Running-Version             New-Version  Upg-Required
------  ----------  ---------------------  ----------------------  ------------
     1      system           5.2(1)SV3(2.8)           5.2(1)SV3(3.1)           yes
     1   kickstart           5.2(1)SV3(2.8)           5.2(1)SV3(3.1)           yes
     2      system           5.2(1)SV3(2.8)           5.2(1)SV3(3.1)           yes
     2   kickstart           5.2(1)SV3(2.8)           5.2(1)SV3(3.1)           yes
```

```
Module         Running-Version                                          ESX Version       VSM
Compatibility       ESX Compatibility
------  --------------------  ------------------------------------------------------
----------------------  ----------------------
     3          5.2(1)SV3(3.1)         VMware ESXi 5.0.0 Releasebuild-469512 (3.1)
  COMPATIBLE              COMPATIBLE
     4          5.2(1)SV3(3.1)         VMware ESXi 5.0.0 Releasebuild-469512 (3.1)
  COMPATIBLE              COMPATIBLE
```

**Step 11** Read the release notes for the related image file. See the *Cisco Nexus 1000V Release Notes*.

**Step 12** Determine if Virtual Security Gateway (VSG) is configured in the deployment:

- If the following output is displayed, the Cisco VSG is configured in the deployment. You must follow the upgrade procedure in the "Complete Upgrade Procedure" section in Chapter 7, "Upgrading the Cisco Virtual Security Gateway and Cisco Virtual Network Management Center" of the *Cisco Virtual Security Gateway and Cisco Virtual Network Management Center Installation and Upgrade Guide*.

```
switch# show nsc-pa status
NSC Policy-Agent status is - Installed Successfully. Version 3.2(3a)-vsm
switch#
```

- If the following output is displayed, continue to Step 13.

```
switch# show nsc-pa status
NSC Policy-Agent status is - Not Installed
switch#
```

**Step 13** Save the running configuration to the startup configuration.

```
switch# copy running-config startup-config
```

**Step 14** Save the running configuration on the bootflash and externally.

```
switch# copy running-config bootflash:run-cfg-backup
switch# copy running-config scp://user@tftpserver.cisco.com/n1kv-run-cfg-backup
```

**Note** You can also run a VSM backup. See the "Configuring VSM Backup and Recovery" chapter of the *Cisco Nexus 1000V System Management Configuration Guide*.

**Step 15** Perform the upgrade on the active VSM using the kickstart and system images.

- Upgrade using the kickstart and system images.

```
switch# install all impact kickstart bootflash:///n1000v-dk9-kickstart.5.2.1.SV3.3.1.bin system
bootflash:n1000v-dk9.5.2.1.SV3.3.1.bin vnmpa bootflash:vsmcpa.3.2.3a.bin

# Upgrading VEMs

## VEM Upgrade Procedure

- VUM Upgrade Procedures
  - Generate an upgrade ISO. See Upgrading Using a Customized ISO with a VMware ESX Image and a Cisco Nexus 1000V VEM Image.
  - Set up VUM baselines. See http://www.cisco.com/en/US/docs/switches/datacenter/nexus1000/sw/4_2_1_s_v_1_5_2/install_upgrade/vsm_vem/guide/b_Installation_and_Upgrade_Release_4_2_1SV1_5_2_appendix_0100.html#task_A93C11451B0B43F98468D15C83C1E5E5.
  - Initiate an upgrade from VUM. See Upgrading the VEMs Using VMware Update Manager from Release 4.2(1)SV1(4x), and Later Releases to the Current Release, on page 26.
  - Upgrade VEM from VSM. See Upgrading the VEMs Using VMware Update Manager from Release 4.2(1)SV1(4x), and Later Releases to the Current Release, on page 26.
- Manual upgrade procedures
  - Upgrading VIB Manually from the CLI. See Upgrading the VEMs Manually from Release 4.2(1)SV1(4x), Release and Later Releases to the Current Release, on page 29
- Installing or upgrading stateless ESXi. See *Cisco Nexus 1000V Installation and Upgrade Guide*.

VEM upgrades fall into three types:

- An upgrade of stateful ESXi host, without a migration from ESX (with a console OS) to ESXi. This upgrade type is described further in this section.
- An upgrade of a stateless ESXi host. This involves installing a new image on the host by updating the image profile and rebooting the host. For detailed information about stateless ESXi host upgrade, see *Cisco Nexus 1000V Installation and Upgrade Guide*.

An upgrade of stateful ESXi host without a migration from ESX (which has a console OS) to ESXi falls into two separate workflows.

1. Upgrade the VEM alone, while keeping the ESXi version intact. The first figure shows this flow.
2. Upgrade the ESX/ESXi without a change of the Cisco Nexus 1000V version.

If you are using VUM, set up a host patch baseline with the VEM's offline bundle. Then follow Upgrading the VEMs Using VMware Update Manager from Release 4.2(1)SV1(4x), and Later Releases to the Current Release, on page 26.

If you are upgrading from the command line, see Upgrading the VEMs Manually from Release 4.2(1)SV1(4x), Release and Later Releases to the Current Release, on page 29.

- If you are using VUM version 5.0 or later, use the following method (independent of whether the VEM version is being changed as well):
  - If you are upgrading the host to a new update within a release, use a host upgrade baseline. For example, vSphere 5.0 GA to 5.0 U1.
  - You can upgrade the version and VEM version simultaneously if you are using VUM 5.0 Update 1 or later. VUM 5.0 GA does not support a combined upgrade.

## VEM Upgrade Methods from Release 4.2(1)SV1(4x), Release 4.2(1)SV1(5x), or Release 4.2(1)SV2(1.1x) to the Current Release

There are two methods for upgrading the VEMs.

- Upgrading the VEMs Using VMware Update Manager from Release 4.2(1)SV1(4x), and Later Releases to the Current Release, on page 26
- Upgrading the VEMs Manually from Release 4.2(1)SV1(4x), Release and Later Releases to the Current Release, on page 29

### Upgrading the VEMs Using VMware Update Manager from Release 4.2(1)SV1(4x), and Later Releases to the Current Release

**Caution** If removable media is still connected (for example, if you have installed the VSM using ISO and forgot to remove the media), host movement to maintenance mode fails and the VUM upgrade fails.

### SUMMARY STEPS

1. switch# **show vmware vem upgrade status**
2. switch# **vmware vem upgrade notify**
3. switch# **show vmware vem upgrade status**
4. switch# **show vmware vem upgrade status**
5. Initiate the VUM upgrade process with the following commands.
6. switch# **show vmware vem upgrade status**
7. Clear the VEM upgrade status after the upgrade process is complete with the following commands.
8. switch# **show module**

### DETAILED STEPS

**Step 1** switch# **show vmware vem upgrade status**
Display the current configuration.

**Note** The minimum release of Cisco Nexus 1000V for VMware ESXi 5.0.0 hosts is Release 4.2(1)SV1(4a).

**Step 2** switch# **vmware vem upgrade notify**
Coordinate with and notify the server administrator of the VEM upgrade process.

**Step 3** switch# **show vmware vem upgrade status**
Verify that the upgrade notification was sent.

**Note** Verify that the Upgrade Status contains the highlighted text. If the text is not present, check the Upgrade Error line and consult the *Cisco Nexus 1000V Troubleshooting Guide*.

**Step 4** switch# **show vmware vem upgrade status**
Verify that the server administrator has accepted the upgrade in the vCenter. For more information about how the server administrator accepts the VEM upgrade, see Accepting the VEM Upgrade, on page 33. Coordinate the notification acceptance with the server administrator. After the server administrator accepts the upgrade, proceed with the VEM upgrade.

**Note** Verify that the Upgrade Status contains the highlighted text. If the text is not present, check the Upgrade Error line and consult the *Cisco Nexus 1000V Troubleshooting Guide*.

**Step 5** Initiate the VUM upgrade process with the following commands.

**Note** Before entering the following commands, communicate with the server administrator to confirm that the VUM process is operational.

The vCenter Server locks the DVS and triggers VUM to upgrade the VEMs.

a) switch# **vmware vem upgrade proceed**
b) switch# **show vmware vem upgrade status**

**Note** The DVS bundle ID is updated and is highlighted.

If the ESX/ESXi host is using ESX/ESXi 4.1.0 or a later release and your DRS settings are enabled to allow it, VUM automatically VMotions the VMs from the host to another host in the cluster and places the ESX/ESXi in maintenance mode to upgrade the VEM. This process is continued for other hosts in the DRS cluster until all the hosts are upgraded in the cluster. For details about DRS settings required and vMotion of VMs, visit the VMware documentation related to Creating a DRS Cluster.

**Step 6** switch# **show vmware vem upgrade status**
Check for the upgrade complete status.

**Step 7** Clear the VEM upgrade status after the upgrade process is complete with the following commands.

a) switch# **vmware vem upgrade complete**
b) switch# **show vmware vem upgrade status**

**Step 8** switch# **show module**
Verify that the upgrade process is complete.

The upgrade is complete.

---

The following example shows how to upgrade VEMs using VUM.

**Note** The example may contain Cisco Nexus 1000V versions and filenames that are not relevant to your release. Refer to the *Cisco Nexus 1000V and VMware Compatibility Information* for your specific versions and filenames.

**Note** The lines with the bold characters in the preceding example display that all VEMs are upgraded to the current release.

## Upgrading the VEMs Manually from Release 4.2(1)SV1(4x), Release and Later Releases to the Current Release

### Before You Begin

**Note** If VUM is installed, it should be disabled.

To manually install or upgrade the Cisco Nexus 1000V VEM on an ESX/ESXi host, follow the steps in Upgrading the VEM Software Using the vCLI, on page 33.

To upgrade the VEMs manually, perform the following steps as network administrator:

**Note** This procedure is performed by the network administrator. Before proceeding with the upgrade, make sure that the VMs are powered off if you are not running the required patch level.

**Caution** If removable media is still connected, (for example, if you have installed the VSM using ISO and forgot to remove the media), host movement to maintenance mode fails and the VEM upgrade fails.

## SUMMARY STEPS

1. switch# **vmware vem upgrade notify**
2. switch# **show vmware vem upgrade status**
3. switch# **show vmware vem upgrade status**
4. Perform one of the following tasks:
5. switch# **vmware vem upgrade proceed**
6. switch# **show vmware vem upgrade status**
7. Coordinate with and wait until the server administrator upgrades all ESXESXi host VEMs with the new VEM software release and informs you that the upgrade process is complete.
8. switch# **vmware vem upgrade complete**
9. switch# **show vmware vem upgrade status**
10. switch# **show module**

## DETAILED STEPS

**Step 1** switch# **vmware vem upgrade notify**
Coordinate with and notify the server administrator of the VEM upgrade process.

**Step 2** switch# **show vmware vem upgrade status**
Verify that the upgrade notification was sent.

**Step 3** switch# **show vmware vem upgrade status**
Verify that the server administrator has accepted the upgrade in vCenter Server. For details about the server administrator accepting the VEM upgrade, see Accepting the VEM Upgrade, on page 33. After the server administrator accepts the upgrade, proceed with the VEM upgrade.

**Step 4** Perform one of the following tasks:

- If the ESXESXi host is not hosting the VSM, proceed to Step 5.
- If the ESXESXi host is hosting the VSM, coordinate with the server administrator to migrate the VSM to a host that is not being upgraded. Proceed to Step 5.

**Step 5** switch# **vmware vem upgrade proceed**
Initiate the Cisco Nexus 1000V Bundle ID upgrade process.

**Note** If VUM is enabled in the vCenter environment, disable it before entering the **vmware vem upgrade proceed** command to prevent the new VIBs from being pushed to all the hosts.

Enter the **vmware vem upgrade proceed** command so that the Cisco Nexus 1000V Bundle ID on the vCenter Server gets updated. If VUM is enabled and you do not update the Bundle ID, an incorrect VIB version is pushed to the VEM when you next add the ESXESXi to the VSM.

**Note** If VUM is not installed, the "The object or item referred to could not be found" error appears in the vCenter Server task bar. You can ignore this error message.

**Step 6** switch# **show vmware vem upgrade status**
Check for the upgrade complete status.

**Step 7** Coordinate with and wait until the server administrator upgrades all ESXESXi host VEMs with the new VEM software release and informs you that the upgrade process is complete.
The server administrator performs the manual upgrade by using the **vihostupdate** command or the **esxcli** command. For more information, see Upgrading the VEM Software Using the vCLI, on page 33.

**Step 8** switch# **vmware vem upgrade complete**
Clear the VEM upgrade status after the upgrade process is complete.

**Step 9** switch# **show vmware vem upgrade status**
Check the upgrade status once again.

**Step 10** switch# **show module**
Verify that the upgrade process is complete.

**Note** The line with the bold characters in the preceding example display that all VEMs are upgraded to the current release.

The upgrade is complete.

---

The following example shows how to upgrade VEMs manually.

**Note** The example may contain Cisco Nexus 1000V versions and filenames that are not relevant to your release. Refer to the *Cisco Nexus 1000V and VMware Compatibility Information* for your specific versions and filenames.

```

```

### Accepting the VEM Upgrade

#### Before You Begin

- The network and server administrators must coordinate the upgrade procedure with each other.
- You have received a notification in the vCenter Server that a VEM software upgrade is available.

**Step 1** In the vCenter Server, choose **Inventory > Networking**.

**Step 2** Click the **vSphere Client DVS Summary** tab to check for the availability of a software upgrade.

***Figure 3: vSphere Client DVS Summary Tab***

**Step 3** Click **Apply upgrade**.
The network administrator is notified that you are ready to apply the upgrade to the VEMs.

### Upgrading the VEM Software Using the vCLI

You can upgrade the VEM software by using the vCLI.

#### Before You Begin

- If you are using vCLI, do the following:
  - You have downloaded and installed the VMware vCLI. For information about installing the vCLI, see the VMware vCLI documentation.
  - You are logged in to the remote host where the vCLI is installed.

**Note** The vSphere command-line interface (vCLI) command set allows you to enter common system administration commands against ESX/ESXi systems from any machine with network access to those systems. You can also enter most vCLI commands against a vCenter Server system and target any ESX/ESXi system that the vCenter Server system manages. vCLI commands are especially useful for ESXi hosts because ESXi does not include a service console.

- If you are using the **esxupdate** command, you are logged in to the ESX host.
- Check *Cisco Nexus 1000V and VMware Compatibility Information* for compatible versions.
- You have already copied the VEM software installation file to the `/tmp` directory. Do not copy the files to the root (/) folder.
- You know the name of the VEM software file to be installed.

## SUMMARY STEPS

1. [root@serialport -]# **cd tmp**
2. Determine the upgrade method that you want to use and enter the appropriate command.
   - **vihostupdate**
     Installs the ESX/ESXi and VEM software simultaneously if you are using the vCLI.
   - **esxupdate**
     Installs the VEM software from the ESX host /tmp directory.
     **Note** You must log in to each host and enter this command. This command loads the software manually on the host, loads the kernel modules, and starts the VEM agent on the running system.
3. For ESXi 5.5 or later hosts, enter the appropriate commands as they apply to you.
4. Display values with which to compare to *Cisco Nexus 1000V and VMware Compatibility Information* by typing the following commands.
5. switch# **show module**

## DETAILED STEPS

**Step 1** [root@serialport -]# **cd tmp**
Go to the directory where the new VEM software was copied.

**Step 2** Determine the upgrade method that you want to use and enter the appropriate command.

- **vihostupdate**
  Installs the ESX/ESXi and VEM software simultaneously if you are using the vCLI.
- **esxupdate**
  Installs the VEM software from the ESX host /tmp directory.

**Note** You must log in to each host and enter this command. This command loads the software manually on the host, loads the kernel modules, and starts the VEM agent on the running system.

**Step 3** For ESXi 5.5 or later hosts, enter the appropriate commands as they apply to you.

a) ~ # **esxcli software vib install -d** */absolute-path/VEM_bundle*

b) ~ # **esxcli software vib install -v** */absolute-path/vib_file*

**Note** You must specify the absolute path to the *VEM_bundle* and *vib_file* files. The absolute path is the path that starts at the root of the file system such as `/tmp/vib_file`.

**Step 4** Display values with which to compare to *Cisco Nexus 1000V and VMware Compatibility Information* by typing the following commands.

a) [root@serialport tmp]# **vmware -v**

b) root@serialport tmp]# # **esxupdate query**

c) [root@host212 ~]# . ~ # **vem status -v**

d) [root@host212 ~]# **vemcmd show version**

**Step 5** switch# **show module**
Display that the VEMs were upgraded by entering the command on the VSM.

---

If the upgrade was successful, the installation procedure is complete.

The following example shows how to upgrade the VEM software using the vCLI.

**Note** The example may contain Cisco Nexus 1000V versions and filenames that are not relevant to your release. Refer to the *Cisco Nexus 1000V and VMware Compatibility Information* for your specific versions and filenames.
