

# Hot Topics in SDN

Did you know there is an extensive on-demand library of global Cisco Live sessions? This is a quick guide to the most relevant sessions – check it out!

## Getting started

### ► [Intro to SDN and Network Programmability](#)

Software-Defined Networking (SDN), an exciting new approach to network IT Service Management. Find out what it is, what it is not, and Cisco's involvement.

### ► [Designing and Deploying ACI: Lessons from the Field](#)

Cisco Advanced Services shares best practices and lessons learned from real-world deployments.

### ► [First 7 days of ACI](#)

See an introduction to Cisco ACI as two Cisco TAC engineers cover end-to-end configuration options and troubleshooting tips for healthy fabric build outs.

## Programmability

### ► [Network Programmability with ACI](#)

See best practices for programmatic interaction with ACI through system programmatic API's, and scripting tools as you automate tasks with Python and REST.

## Multisite

### ► [ACI Multisite Deployment](#)

Extend and keep ACI policies consistent between your different data center locations.

## Automation

### ► [ACI and Full Stack Automation](#)

Learn how network and application constructs can be delivered in an automated manner. Use structured methodologies to satisfy the requirements of infrastructure admins and application developers.

## Security

### ► [Demystifying ACI Security](#)

Protect your data center against new advanced threats with the best of both Cisco ACI and Cisco Security technologies.

## Get Hands-on Experience with Cisco DevNet

### ► [ACI Programmability](#)

### ► [NX-OS Programmability](#)

\* Requires a Cisco Live account to access on-demand library. Registration and access is free.
